SECURITIES AND EXCHANGE COMMISSION
Washington, D.C. 20549**

FORM 10-K

ANNUAL REPORT PURSUANT TO SECTION 13 OR 15(d) OF THE SECURITIES EXCHANGE ACT OF 1934

For the fiscal year ended December 28, 2024

TRANSITION REPORT PURSUANT TO SECTION 13 OR 15(d) OF THE SECURITIES EXCHANGE ACT OF 1934

For the transition period from _____ to _____

Commission File Number: 001-41501

Mobileye Global Inc.

(Exact name of registrant as specified in its charter)

DE
(State or other jurisdiction of
incorporation or organization)
c/o Mobileye B.V.
Har Hotzvim, 1 Shlomo Momo HaLevi Street
Jerusalem, Israel
(Address of principal executive offices)

88-0666433
(I.R.S. Employer
Identification No.)

9777015
(Zip Code)

+972-2-541-7333

(Registrant's telephone number, including area code)

Securities registered pursuant to Section 12(b) of the Act:

Title of each class	Trading Symbol(s)	Name of each exchange on which registered
Class A common stock, \$0.01 par value per share	MBLY	Nasdaq Global Select Market

Securities registered pursuant to Section 12(g) of the Act: None

Indicate by check mark if the registrant is a well-known seasoned issuer, as defined in Rule 405 of the Securities Act. Yes No

Indicate by check mark if the registrant is not required to file reports pursuant to Section 13 or 15(d) of the Act. Yes No

Indicate by check mark whether the registrant (1) has filed all reports required to be filed by Section 13 or 15(d) of the Securities Exchange Act of 1934 during the preceding 12 months (or for such shorter period that the registrant was required to file such reports), and (2) has been subject to such filing requirements for the past 90 days. Yes No

Indicate by check mark whether the registrant has submitted electronically every Interactive Data File required to be submitted pursuant to Rule 405 of Regulation S-T (§ 232.405 of this chapter) during the preceding 12 months (or for such shorter period that the registrant was required to submit such files). Yes No

Indicate by check mark whether the registrant is a large accelerated filer, an accelerated filer, a non-accelerated filer, a smaller reporting company, or an emerging growth company. See the definitions of "large accelerated filer," "accelerated filer," "smaller reporting company," and "emerging growth company" in Rule 12b-2 of the Exchange Act.

Large accelerated filer	<input checked="" type="checkbox"/>	Accelerated filer	<input type="checkbox"/>
Non-accelerated filer	<input type="checkbox"/>	Smaller reporting company	<input type="checkbox"/>
		Emerging growth company	<input type="checkbox"/>

If an emerging growth company, indicate by check mark if the registrant has elected not to use the extended transition period for complying with any new or revised financial accounting standards provided pursuant to Section 13(a) of the Exchange Act.

Indicate by check mark whether the registrant has filed a report on and attestation to its management's assessment of the effectiveness of its internal control over financial reporting under Section 404(b) of the Sarbanes-Oxley Act (15 U.S.C. 7262(b)) by the registered public accounting firm that prepared or issued its audit report. Yes No

If securities are registered pursuant to Section 12(b) of the Act, indicate by check mark whether the financial statements of the registrant included in the filing reflect the correction of an error to previously issued financial statements.

Indicate by check mark whether any of those error corrections are restatements that required a recovery analysis of incentive-based compensation received by any of the registrant's executive officers during the relevant recovery period pursuant to §240.10D-1(b).

Indicate by check mark whether the registrant is a shell company (as defined in Rule 12b-2 of the Exchange Act). Yes No

Aggregate market value of voting and non-voting common equity held by non-affiliates of the registrant as of June 29, 2024, based upon the closing price of the common stock as reported by the Nasdaq Global Select Market on June 29, 2024, was \$2.69 billion. 100,226,477 shares of Class A common stock and 711,500,000 shares of Class B common stock were outstanding as of January 31, 2025.

Portions of the Mobileye Global Inc. 2025 definitive Proxy Statement, which will be filed with the Securities and Exchange Commission within 120 days after December 28, 2024, are incorporated by reference in Part III of this Form 10-K.

Mobileye Global Inc.

CAUTIONARY NOTE REGARDING FORWARD-LOOKING STATEMENTS

This Annual Report on Form 10-K includes forward-looking statements within the meaning of the federal securities laws. Mobileye and its representatives may also, from time to time, make certain forward-looking statements in publicly released materials, both written and oral, including statements contained in filings with the SEC, press releases, and our reports to stockholders. Forward-looking statements may be identified by the use of words such as “plan,” “expect,” “believe,” “intend,” “will,” “may,” “anticipate,” “estimate” and other words of similar meaning in conjunction with, among other things, discussions of future operations and financial performance (including volume growth, pricing, sales and earnings per share growth, and cash flows) and statements regarding our strategy for growth, future product development, regulatory approvals, competitive position and expenditures. All statements that address our future operating performance or events or developments that we expect or anticipate will occur in the future are forward-looking statements.

Forward-looking statements are, and will be, based on management’s then-current views and assumptions regarding future events, developments and operating performance, and speak only as of their dates. Investors should realize that if underlying assumptions prove inaccurate, or risks or uncertainties materialize, actual results could vary materially from our expectations and projections. Investors are therefore cautioned not to place undue reliance on any forward-looking statements. Furthermore, we undertake no obligation to update or revise any forward-looking statements after the date they are made, whether as a result of new information, future events and developments or otherwise, except as required by applicable law or regulations.

Forward-looking statements contained in this Annual Report on Form 10-K may include, but are not limited to, statements about:

- future business, social and environmental performance, goals and measures;
- our anticipated growth prospects and trends in markets and industries relevant to our business;
- business and investment plans;
- expectations about our ability to maintain or enhance our leadership position in the markets in which we participate;
- future consumer demand and behavior, including expectations about excess inventory utilization by customers;
- our ability to effectively compete in the markets in which we operate;
- future products and technology, and the expected availability and benefits of such products and technology;
- development of regulatory frameworks for current and future technology;
- changes in regulation and trade policy, including increased tariffs, in regions in which we operate, including the U.S., Europe and China;
- projected cost and pricing trends;
- future production capacity and product supply;
- potential future benefits and competitive advantages associated with our technologies and architecture and the data we have accumulated;
- the future purchase, use and availability of products, components and services supplied by third parties, including third-party IP and manufacturing services;
- uncertain events or assumptions, including statements relating to our estimated vehicle production and market opportunity, potential production volumes associated with design wins and other characterizations of future events or circumstances;
- availability, uses, sufficiency and cost of capital and capital resources, including expected returns to stockholders such as dividends, and the expected timing of future dividends;

[Table of Contents](#)

- tax- and accounting-related expectations;
- adverse conditions in Israel, including in connection with Israeli military operations in response to the October 7, 2023 terrorist attacks, which may affect our operations and may limit our ability to produce and sell our solutions;
- any disruption in our operations by the obligations of our personnel to perform military service as a result of current or future military actions involving Israel; and
- other statements described in this Annual Report on Form 10-K, including under the sections entitled “Item 1A. Risk Factors,” “Item 7. Management’s Discussion and Analysis of Financial Condition and Results of Operations” and “Item 1. Business”.

The risk factors discussed under the section entitled “Item 1A. Risk Factors” included herein could cause our results to differ materially from those expressed in the forward-looking statements made in this Annual Report on Form 10-K.

There also may be other risks that are currently unknown to us or that we are unable to predict at this time.

PART I

Item 1. Business

In this Annual Report on Form 10-K, references to “we,” “us,” “our,” our “company,” “Mobileye,” the “Company,” and similar terms refer to Mobileye Global Inc. and, unless the context requires otherwise, its consolidated subsidiaries, except with respect to our historical business, operations, financial performance, and financial condition prior to our initial public offering, where such terms refer to Mobileye Group, which combines the operations of Cyclops Holdings Corporation, Mobileye B.V., GG Acquisition Ltd., Moovit App Global Ltd., and their respective subsidiaries, along with certain Intel employees mainly in research and development. References to “Moovit” refer to GG Acquisition Ltd., Moovit App Global Ltd. and their consolidated subsidiaries.

We have a 52- or 53-week fiscal year that ends on the last Saturday in December. Fiscal years 2024 and 2023 were 52-week fiscal years; fiscal year 2022 was a 53-week fiscal year. The additional week in fiscal year 2022 was added to the first quarter, which consisted of 14 weeks. Any references to our performance for the years 2024, 2023 and 2022 are references to our fiscal years ended December 28, 2024, December 30, 2023 and December 31, 2022, respectively, and all references to our financial condition as of the end of 2024 and 2023 are references to the end of such fiscal years. Certain amounts, percentages, and other figures presented in this report have been subject to rounding adjustments. Accordingly, figures shown as totals, dollars, or percentage amounts of changes may not represent the arithmetic summation or calculation of the figures that precede them.

Company Overview

Mobileye is a leader in the development and deployment of advanced driver assistance systems (“ADAS”) and autonomous driving technologies and solutions. We pioneered ADAS technology more than 20 years ago and have continuously expanded the scope of our ADAS offerings, while leading the evolution to autonomous driving solutions.

Our portfolio of solutions is built upon a comprehensive suite of purpose-built software and hardware technologies designed to provide the capabilities needed to make the future of ADAS and autonomous driving a reality. These technologies can be harnessed to deliver mission-critical capabilities at the edge and in the cloud, advancing the safety of road users, and revolutionizing the driving experience and the movement of people and goods globally.

While today ADAS is central to the advancement of automotive safety, we believe that an evolutionary path toward fully autonomous vehicles is the future of mobility. While still nascent, full autonomy - where a human is not actively engaged in driving the vehicle for extended periods of time - requires the autonomous driving solution to be capable of navigating any environment in any condition at any time. The ability to drive autonomously not only requires a substantial amount of data, but also a robust technology platform that optimizes both precision (*i.e.*, safety) and recall (*i.e.*, availability) without compromise, and can withstand the validation and audit process of global regulatory bodies. Further, the autonomous driving solution needs to be produced at a cost that makes it affordable. We are building our technology platform to address these fundamental and significant challenges in order to enable a full spectrum of solutions, from ADAS to autonomous driving, with several incremental steps in between.

We believe that our industry-leading technology platform, built upon over 20 years of research, development, data collection and validation, and purpose-built software and hardware design, gives us a differentiated ability to not only deliver excellent safety ratings and maintain a leadership position with our ADAS solutions, but also to make the mass deployment of autonomous driving solutions a reality. We also believe that the breadth of our solutions, combined with our global customer base, represents a significant market opportunity for us. Our platform is efficient and modular by design, enabling our customers to productize our most advanced solutions today and then leverage those investments to launch even more advanced systems in a modular and incremental manner. Our solutions are also highly customizable, which allows our customers to benefit from the core technology supporting our advanced solutions while also augmenting and differentiating their offerings.

[Table of Contents](#)

We have experienced significant growth since our founding. For 2024, 2023 and 2022, our revenue was \$1.7 billion, \$2.1 billion and \$1.9 billion, respectively, representing a year-over-year decrease of 20% in 2024 compared to 2023 primarily due to a significant drawdown of excess inventory at our Tier 1 customers and a reduction in volumes shipped to China in 2024. We currently derive substantially all of our revenue from our commercially deployed ADAS solutions. We recorded net losses of \$3,090 million, \$27 million and \$82 million in 2024, 2023 and 2022, respectively, with the net loss in 2024 primarily being the result of recording a \$2,695 million (\$2,613 million, net of tax) non-cash impairment of goodwill in the third quarter of 2024. Our Adjusted Net Income for 2024, 2023 and 2022 was \$205 million, \$659 million and \$605 million, respectively. Adjusted Net Income is a non-GAAP financial measure; see “Item 7. Management’s Discussion and Analysis of Financial Condition and Results of Operations – Non-GAAP Financial Measures” for a reconciliation of Adjusted Net Income to Net Income (Loss). The adjustments to reconcile Net Income (Loss) with Adjusted Net Income are related to amortization of intangible assets, stock-based compensation expenses, impairment of goodwill, expenses related to the initial public offering of Mobileye in October 2022 (the “Mobileye IPO”) and related income tax effects where applicable. The amortization of intangible assets consisting of developed technology, customer relationships and brands, is primarily a result of Intel’s acquisition of Mobileye in 2017 and, to a lesser extent, the acquisition of Moovit in 2020.

As of December 28, 2024, our solutions have been installed in approximately 1,200 vehicle models (including local country, year, and other vehicle model variations), and our System-on-Chips (“SoCs”) have been deployed in over 200 million vehicles. We are actively working with more than 50 Original Equipment Manufacturers (“OEMs”) worldwide on the implementation of our ADAS solutions. For the year ended December 28, 2024, we shipped approximately 29.0 million of our EyeQ™ SoC and SuperVision™ systems, of which the substantial majority were EyeQ™ SoCs. This represents a decrease from approximately 37.4 million systems that we shipped in 2023, and approximately 33.7 million systems that we shipped in 2022, primarily due to a significant drawdown of excess inventory at our Tier 1 customers and a reduction in volumes shipped to China in 2024.

We were founded in Israel in 1999. Our co-founder, Professor Amnon Shashua, is our President and Chief Executive Officer. In 2014, we completed an initial public offering as a foreign private issuer and traded under the symbol MBLY on the New York Stock Exchange. Intel Corporation (“Intel”) acquired Mobileye for \$15.3 billion in 2017, after which we became a wholly-owned subsidiary of Intel. We completed the internal reorganization and design of our new public entity (the “Reorganization”) and the Mobileye IPO in October 2022.

Our Technology Platform is Built to Enable the Full-Stack of Autonomous Solutions

Our technology platform, which includes our software and hardware intellectual property, leverages our decades of experience as a technology leader for sensing and perception solutions for the automotive industry and our focused efforts to build highly scalable, compute-efficient and cost-efficient autonomous solutions. Our technologies are foundational to the development and deployment of our ADAS and AV capabilities. Our platform is built on five fundamental pillars:

- **Computer Vision Processing.** Mobileye’s history as a cutting-edge deployer of AI-based solutions in the real world starts with our expertise in computer vision processing. ADAS solutions are responsible for saving lives and must meet very high-performance metrics with extreme levels of efficiency, as well as pass increasing oversight from regulatory bodies. “Good enough” is simply not acceptable. The precision requirements for advanced solutions in the Premium ADAS and AV segments are even more exacting. We are a technology leader for computer vision technology for ADAS, largely through front camera solutions, and we have continuously enhanced our leadership position through our ability to meet the extreme performance, accuracy, and cost metrics of our OEM customers. In recent years, we have expanded our capability to enable creation of a 360-degree world-view through the processing of multiple cameras placed around the vehicle to support our portfolio of advanced solutions. Our products primarily use monocular camera processing that works accurately alone, or together with radar and lidar for redundancy. The software supporting camera processing is diverse, including end-to-end neural network processing (both 2- and 3-dimensional) and model-based techniques, among other approaches. This compound AI system structure leads to internal redundancies within the camera-based perception system that enhances precision through design. We have been responsible for many “industry first” launches using monocular vision processing, and have enhanced our computer vision capabilities over time to include multiple cameras such as the trifocal camera configuration (three cameras with different fields of view placed side-by-side facing forward), which has been in series production since 2018, and the 11-camera configuration on our Mobileye SuperVision™ solution, which was launched in late 2021.

- **Road Experience Management™.** Our Road Experience Management™ (“REM™”) technology generates high-precision maps to support advanced ADAS and autonomous vehicle systems from crowd-sourced data that is uploaded and analyzed in the cloud from REM™-equipped production ADAS solutions deployed on vehicles on the road. REM™ is a cloud-based system that leverages the broad installed-base of REM™-equipped vehicles to build Mobileye Roadbook™, our crowd-sourced, high-precision definition maps of roads from around the world. Our REM™ mapping system harvests small packets of Road Segment Data from various vehicle models produced by our partner OEMs that are equipped with special processing software that extracts only the relevant information necessary to support increasing levels of ADAS and autonomous driving. In 2024 alone, we collected 29.6 billion miles of road data from, based on our estimates, 3 million REM™-enabled vehicles worldwide. The Road Segment Data is uploaded to the cloud where our software automatically creates and updates a detailed and accurate model of the road. Our REM™ mapping system seamlessly creates high-precision maps from such Road Segment Data in the cloud at centimeter-level detail, which are then delivered to the edge and integrated with our computer vision engines to provide vehicles with real-time intelligence, including situational awareness, context, and foresight. Mobileye Roadbook™ was designed to provide the driving solution with a pre-aggregated representation of relevant static and slowly changing elements of the environment (road geometry, boundaries, and semantics) and temporary events such as construction zones and road debris, at a high refresh rate.

The Richness of REM™ AV Maps

Main attributes of REM™ AV maps provided in any road type:

- + Drivable paths
- + Road edge
- + Traffic light and Traffic sign to lane association
- + Yield and priority
- + Crosswalks and crosswalks relevancy
- + Stopping points and stop lines
- + Common and legal speed per lane
- + Construction areas
- + Toll areas and lane type

• **Compound Artificial Intelligence Systems, including True Redundancy™.** Our Compound AI structure supports precision, recall, and overall efficiency by design. While recent advancements in transformer-based architectures and Generative AI create efficiencies in learning-based systems, which Mobileye makes full use of, it also introduces shortfalls such as lack of abstraction, shortcut-learning problem, alignment issues (*i.e.*, learning from common but incorrect data), and the long-tail problem (*i.e.*, identifying and fixing edge cases one by one). Inevitably this approach is intended to drive high recall at the expense of precision. This inherently introduces significant risk when it comes to the complexity of real-world driving scenarios. Our solution, which aligns with the latest developments in Generative AI even in non safety-critical applications includes insertion of abstractions and an architecture with multiple levels of redundancies that support a quadratic improvement in precision through design. Insertion of abstractions can successfully convert large sets of out-of-distribution edge cases to in-distribution without the need for iterative network re-training with more and more data. Additionally, our structure includes redundancies within the computer vision stack, the fusion of mapping with real-time perception, the fusion of decomposable and end-to-end architectures, and True Redundancy™ - the fusion of independent world-views produced by separate vision and radar/lidar-based subsystems.

True Redundancy™ - The Idea Behind Lidar and Radar Development

When it comes to safety, our multi-faceted high-level fusion structure is governed by a Primary / Guardian / Fallback methodology (“PGF”) which can handle “majority-rule” as well as non-binary discrepancies. This technology approach supports a quadratic improvement in precision through a framework in which the system only fails if two subsystems fail concurrently. It is a critical enabler of our goal of building a fully autonomous driving-system that can be validated as safer than human-driven vehicles, devoid of unreasonable risks, and deployed in a cost-efficient manner. This approach separates our system from competitors that utilize a monolithic approach.

- **Next Generation Imaging Radars.** A solution targeted to complement the camera-based system with a sensor that has nearly fully-independent failure modes, supports high precision and to reduce the need for multiple expensive lidar sensors, supports cost-efficiency, a major component of recall. The in-house development of imaging radar is a key enabler of our goal of building a cost-effective fully autonomous driving-system. Our radar is expected to deliver rich point-cloud models like those customary of lidar, with far higher resolution and significantly more dynamic range than traditional radar. During 2024, these goals were validated through widespread testing of our B-sample hardware by a number of OEMs. These radars differ from legacy radar and other imaging radar development as, backed by advanced processing algorithms, they can enable an independent “sensing state” with independent failure modes than the camera-based system which supports a quadratic improvement in mean-time-between failure. Our choice to focus on the evolution of the radar modality is also related to its cost structure which is significantly below lidar sensors. We believe our custom designed imaging radars address not only the performance, but also the cost limitations of lidar-centric solutions for mass AV deployment. We have selected multiple manufacturers for this solution which is approaching start of production.

- **Our Family of Purpose-Built EyeQ™ SoCs.** Fundamental to our leadership position in ADAS and our ambitions to develop the most cost-efficient, high-performing AV solutions, our EyeQ™ SoCs incorporate a set of proprietary compute-acceleration models to enhance the accuracy, quality, and functional safety of our perception solutions, while minimizing the power consumption to address the requirements of the automotive market. The EyeQ™ family design also enables a scalable Electronic Control Unit (“ECU”) architecture, thereby supporting a variety of ADAS and autonomous vehicle solution architectures that meet the functional safety requirements of our customers. These solutions range from base, windshield mounted ECUs to multi-SoC central compute ECUs supported currently by EyeQ™5 High and in the near future EyeQ™6 High, which can be deployed in a scalable way to support a full suite of Premium ADAS and AV solutions.

[Table of Contents](#)

Efficiency of our inference silicon design is a core enabler of the overall efficiency of our system, and is critical in applications like automotive which highly value packaging size and power consumption. Designing an efficient silicon architecture requires optimizing the competing factors of efficiency and flexibility. We accomplish this through the development a variety of accelerators, each of which are designed to perform specific tasks that either most favor efficiency, flexibility, or a combination of both. Successful design has led to a 10-times improvement in frames-per-second processing for EyeQ™6 High, as compared to EyeQ™5 High, despite only double the headline processing power (*i.e.*, TOPS) and 25% higher power consumption. Based on competitive benchmarking, the EyeQ™6 High is significantly more efficient than more general purpose SoC's that are much higher headline processing power, in terms of frames-per-second, latency, and cost. We continue to believe that, as AV solutions continue to develop, efficiency of inference silicon will be one of the most significant purchasing criteria and Mobileye has inherent advantages in this area.

Our EyeQ™5 SoCs and subsequent generations are increasingly customizable by our OEM customers, supported by our Driving Experience Platform (“DXP”). DXP is a software platform that enables automakers to develop and customize the driving experience (*i.e.*, the OEM-unique aspect of a vehicle’s automated driving features) while utilizing Mobileye’s proven core technology perception and driving policy software (*i.e.*, the objective, universal aspects of a vehicle’s automated driving features). This new application programming interface supports our customers’ desire to create unique products from our technology while also accelerating time-to-market and reducing overall execution risk. Importantly, this collaborative addition to our platform offer a mutually beneficial middle ground between open and closed systems which we believe is the optimal path forward.

These five pillars form the core of our highly versatile and customizable platform, which we intend to deploy with progressively increasing functionality to continue to enhance our market-leading ADAS solutions and lead the evolution to autonomous driving solutions.

The Autonomous Vehicle Revolution

Autonomous driving is one of the most difficult technological challenges facing the world today. Autonomous driving as a technological concept has been at the forefront of human imagination for decades. Since the early 2000s, a number of automotive and technology companies have invested heavily to try to make this a reality. Mobileye is leading the evolution from ADAS to autonomous driving.

Vehicle autonomy can be viewed as a spectrum that uses the same technology building blocks to power the full span of driver assist functions, ranging from those available in hundreds of car models today, through full autonomy powering robotaxis and, eventually, personal autonomous vehicles. The automotive industry breaks down this spectrum into what are known as SAE Levels 1, 2, 3, 4 and 5. We have developed our own, more user-friendly taxonomy. Each level of our taxonomy is further defined and supported by the particular operational design domain (“ODD”) for which it was designed.

[Table of Contents](#)

First, we refer to basic driver assist features, such as automatic emergency braking or lane keeping assist, together with longitudinal control such as adaptive cruise control as “eyes-on/hands-on”. The driver is still responsible for the overall task of driving, while the system supports the human driver.

Second, “eyes-on/hands-off”. This refers to premium driver assist functions adding additional safety and comfort functionality. This functionality allows the driver to experience hands-free driving while requiring the driver’s full attention and eyes on the road.

Third, “eyes-off/hands-off”. The system controls the driving function within a specified ODD, such as highway driving, without the need for the human driver to monitor driving. If the ODD is exceeded and the driver does not reassume control, the system is capable of performing a Minimum Risk Maneuver (“MRM”) and safely stop at the roadside.

Fourth, “no driver”. When no human driver is present, *e.g.*, a robotaxi, the system will perform a MRM when needed, including coming to a full stop, and can also contact a teleoperator for decision support, such as re-routing and rules decisions.

We believe that the path to full autonomy at scale will begin with increased proliferation of the middle category - eyes-on/hands-off premium driver assist - enabling hands-free highway driving, for example, and then will gradually extend to other types of roadways, such as rural, urban, and arterial roads. This will allow continued technological development and public trust and familiarity to grow and pave the way toward full autonomy. Our ADAS solutions, which have been deployed in over 200 million vehicles, are important building blocks for these more advanced autonomous systems. We believe the key factors in the growth of autonomous driving will be increased safety, consumer demand, and other economic and social benefits, such as increased mobility for older adults and persons with disabilities, less traffic congestion, and the reduction of land use for parking.

Our Solutions

We have utilized the technology pillars detailed above to build a robust portfolio of end-to-end ADAS and autonomous driving solutions that provide the capabilities needed for the future of autonomous driving, leveraging a comprehensive suite of purpose-built software and hardware technologies. We pioneered “base” ADAS features to meet global regulatory requirements and safety ratings with our Base ADAS solution and we have since created new categories of ADAS with our Cloud-Enhanced ADAS™, Mobileye Surround ADAS™, and SuperVision™ offerings. Additionally, we have designed a full set of eyes-off/hands-off solutions at a wide variety of price points and a spectrum of functionalities and ODDs.

[Table of Contents](#)

We believe that our industry-leading technology platform, built upon multiple years of research, development, data collection and validation, gives us the unique ability to not only deliver excellent safety ratings with our ADAS solutions, but also to make the mass deployment of autonomous driving solutions a reality. We believe that the breadth of our solutions, combined with our global customer base, represents a significant market opportunity for us.

The chart above represents commercially deployed solutions (Base ADAS, Cloud-Enhanced ADAS™ and Mobileye SuperVision™) and solutions that we expect to be commercially deployed in the future (Mobileye Surround ADAS™, Mobileye Chauffeur™, and Mobileye Drive™).

Our End-to-End ADAS and AV Solutions

Mobileye Base ADAS

Mobileye Base ADAS

Mobileye’s Base ADAS, powered by our purpose built, on-windshield EyeQ™ SoC devices and our expertise in computer vision, brings our core ADAS solutions to millions of vehicles on the road today and is foundational to our spectrum of ADAS and autonomous vehicle solutions. Our EyeQ™ SoC provides drivers with basic safety features covered by front-facing sensing, such as collision warning, lane departure warnings, pedestrian and cyclist collision warning, headway monitoring and warning, speed limit indicator, blind spot detection, and many more. Our software algorithms and purpose-built hardware are designed to provide the driver with accurate and reliable driver assist solutions, promoting road safety.

Cloud-Enhanced ADAS™

Mobileye Cloud-Enhanced ADAS™

Mobileye’s Cloud-Enhanced ADAS™ leverages crowdsourced data from millions of REM™-equipped vehicles around the globe every day, providing high-level accuracy localization via continuously updated information about the driving scene. Enhancing the existing single-camera system with crowdsourced data offers comprehensive in-path assist functionality that enables better performance and compliance even in complex or challenging circumstances. Relying on data from prior human driving activity to anticipate and adapt, our Cloud-Enhanced ADAS™ solution provides a safer, smoother, and more natural driving experience – marking a software defined leap in ADAS performance with no need for additional hardware.

Mobileye Surround ADAS™

Mobileye Surround ADAS™

Building on our ADAS expertise and the core of our single-camera Cloud-Enhanced ADAS™ system, we offer through our Mobileye Surround ADAS™ system the ability to meet expanded late-decade active safety requirements through the utilization, analysis, and processing of additional surround perception sensors. Mobileye Surround ADAS™ utilizes the SuperVision™ software stack, including our RSS (defined below) policy model, and is powered by a Mobileye ECU with one EyeQ™6 High SoC, which processes data from the customer's third party sensor suite featuring up to six cameras and up to five radars. Such cameras generally consist of two long-range cameras in the front and rear, while leveraging data from four short-range surround vision cameras that are already equipped on many production vehicles today for parking visualization purposes. Additionally, Mobileye Surround ADAS™ offers eyes-on/hands-off functionality for highway ODDs by adding features like automatic lane change, front and rear collision avoidance, traffic jam assist, and a Highway Pilot function up to 130 kilometers per hour with the fidelity of a multi-camera and multi-radar sensor suite. This system also includes DXP support, which enables customers to customize the driving experience while benefiting from our industry-leading technology platform.

Mobileye SuperVision™

Mobileye SuperVision™

Mobileye SuperVision™, our eyes-on/hands-off Premium Driver Assist offering, is our most advanced driver assist system on the market and the bridge to consumer autonomous vehicles. It is designed to handle standard driving functions across various road types, offering “hands-off” navigation capabilities under certain ODDs, while still requiring the driver to pay full attention and keep eyes on the road. Derived from our autonomous vehicle research and development, Mobileye SuperVision™ leverages cloud-based enhancements such as REM™, a number of algorithmic and architectural redundancies, and our RSS policy model. The system utilizes 360-degree surround sensing with 11 third-party cameras powered (plus optional radar) processes by a turnkey ECU with two EyeQ™5 or, in the future, two EyeQ™6 SoCs. Furthermore, in addition to supervised point-to-point assisted driving, Mobileye SuperVision™ is capable of changing lanes, managing priorities, and turning in intersections as well as engaging in automated parking, preventative (*i.e.*, evasive) steering and braking, and other Driver Assist features. This solution is further supported by OTA updates. The 11 third-party cameras (seven long range cameras and four short-range surround vision cameras) provide full surround coverage and consist of 120-degree and 28-degree cameras in the front, four 100-degree corner cameras (two front-facing and two rear-facing), a 60-degree rear camera and four wide-view 195-degree short-range cameras mounted on the side mirrors and front and rear bumpers. The mapping is powered by REM™, and integrated with computer vision perception, to create a 360-degree environmental model (subject to the availability of map data) and RSS constrains the driving decisions to be compliant with an underlying formally proven model for safe driving decisions. This offering also includes DXP, which will enable customers to control the driving experience while benefiting from our industry-leading technology platform.

Mobileye SuperVision™

Sensor set		
1 X MAIN CAMERA	120°	8MP
1 X NARROW CAMERA	28°	8MP
2 X WING FRONT CAMERAS	100°	8MP
2 X WING REAR CAMERAS	100°	8MP
1 X REAR CAMERA	60°	8MP
4 X SURROUND VIEW PARKING CAMERAS	195°	3MP
1 X LRR/MRR RADAR (Optional)		
4 X CORNER SRR (Optional)		

Powered by Two EyeQ™ 5 High SoCs
Next generation Two EyeQ™ 6

Importantly, our SuperVision™ technology also serves as a bridge, or foundational technology, for Mobileye and its customers to develop a spectrum of “eyes-off/hands-off solutions with expanding ODDs. In other words, an OEM that adopts and validates SuperVision™ is taking a significant step towards consumer AV as SuperVision™ serves as a validated baseline, including a common primary ECU board, which can be leveraged to add eyes-off functionality under an increasing set of operating conditions in a modular way.

The first series production launch of this offering occurred in 2021 as Geely Group launched Mobileye SuperVision™ in its ZEEKR premium electric vehicle brand. Through the end of 2024, over 300,000 SuperVision™ systems were delivered to ZEEKR and other brands.

Mobileye Chauffeur™ and Mobileye Drive™

Mobileye Chauffeur™

- **11 Cameras**
 - 7 Cameras 8MP
 - 4 Short-Range Cameras 3MP
- Surround Radars (front imaging radar)
- 1 Front Lidar
- REM™ Cloud
- DMS Required
- ECU – 3 x EyeQ™ 6H

[Table of Contents](#)

Mobileye Chauffeur™ is our geographically scalable eyes-off/hands-off solution for consumer vehicles in a gradually expanding ODD, combining computer vision technology with surround imaging radars and front lidar. The first generation solution will be based on three EyeQ™6 High SoCs, deployed with a primary board including two EyeQ6 High SoCs supporting full surround computer vision perception and mapping and a secondary board with an additional EyeQ6 High SoC supporting radar / lidar perception and our Compound AI fusion architecture. The primary board is common to our SuperVision™ solution which reduces the OEM’s validation burden and the dual-board setup provides functional safety redundancy. The system will provide 360-degrees of coverage through two independent and redundant sensing subsystems, along with REM™ maps, RSS, and our PGF architecture, to support optimized scalability and safety. Mobileye Chauffeur™ is expected to be capable of eyes-off/hands-off driving with a human driver still in the driver’s seat, in a gradually expanding ODD that can range from a limited ODD (e.g., highway only, up to 130kph), an ODD that we believe covers the majority of most consumers’ driving, to the more advanced ODDs that we are pursuing through this solution in subsequent generations. By using Mobileye SuperVision™ eyes-on/hands-off system as a basis for Mobileye Chauffeur™, we allow for an incremental and modular eyes-off transition from one ODD to the next. This can be done by adding more active sensors for redundancy and more compute power to the already validated and road-tested Mobileye SuperVision™. This approach gives our customers a viable, modular, and incremental path toward useful and safe consumer AV solutions.

Mobileye Drive™

Mobileye Drive™ is our fleet-focused end-to-end self-driving system that enables automakers, public transportation companies, and transportation network operators to offer a no-driver solution for robotaxis, ride-pooling, public transport, and goods delivery. This eyes-off/hands-off/no driver solution will build upon our core autonomous driving technologies found in Mobileye Chauffeur™ and will deliver driving functions without the need for any in-vehicle human intervention by adding teleoperability and by minimizing cases where human input would be required. Our overall turnkey self-driving solution offers an advanced ODD that can turn various vehicle configurations and solutions autonomous. Mobileye Drive™ is already being integrated, and is in the development, testing and validation stages in autonomous public transit, autonomous goods delivery and autonomous mobility-as-a-service (“AMaaS”) across industries and around the globe.

We believe that both Mobileye Chauffeur™ and Mobileye Drive™ have sustainable competitive advantages as a result of the cost efficiency, scalability, and regulatory validation of our technology platform:

- **Cost Efficiency** - cost-efficient, low-energy, purpose-built central compute processors; imaging radars targeted to reduce the need for multiple lidar units;

- **Geographic Scalability** - REM™-based maps that eliminate the need for dedicated high-definition mapping efforts; RSS-based driving policy designed for global deployment by not relying on driving culture or local rules; sensing technologies built on a foundation of a massive data training set from over 40 countries; and

- **Regulatory Validation** - True Redundancy™, with multiple independent, separate perception subsystems feeding our Compound AI architecture that increases robustness and ease of validation, and RSS used by international bodies that are currently developing standards with respect to the safety of AV.

- **Self-Driving System & Vehicles**. We expect to deploy our Mobileye Drive™ eyes-off/hands-off self-driving system inside purpose-built vehicle platforms that are engineered to integrate our technology stack. Announced supply-side vehicle development partners are Volkswagen Commercial Vehicles, Schaeffler, Verne and Holon. We and our vehicle development partners will then market these vehicles and systems through business-to-business channels into a range of transportation network operators, with announced demand-side customers including Deutsche Bahn, Beep, Holo / Ruter, Lyft and others.

Overall, we believe our proprietary set of software and hardware technology solutions results in significant competitive advantages and a wider range of potential offerings compared to other approaches by industry participants attempting to commercialize network - deployed autonomous vehicles.

Models for AV Adoption

We believe that the availability of autonomous vehicles will cause a significant transformation in mobility, including vehicle ownership and utilization. We expect that autonomous vehicle technology will eventually be accessed by consumers through shared-vehicle AMaaS networks, as well as in consumer-owned and operated autonomous vehicles. It is our view that, to reach the full potential of autonomous driving over the long-term, the technology solutions that enable these separate markets should converge over time, and that is reflected in our strategy.

Autonomous driving has the potential to dramatically increase the proliferation of shared mobility, creating greater utilization of what is currently a significantly underutilized asset, the car. We believe that this model will ultimately manifest itself in the form of networks operated by a variety of different automotive and technology companies, where the consumer will be able to hail on-demand transportation at the click of a button, instead of owning a vehicle.

In addition, we believe consumer-owned and operated AVs will fundamentally change how individuals utilize their vehicles. Automation would allow the individual to be significantly more productive during their commute or other time spent in the car, given that the vehicle could operate eyes-off/hands-off in an increasingly wide ODD. Providing consumers with access to affordable autonomous vehicles can create significant value by decreasing time spent focused on the driving function and increasing safety.

As autonomous driving technology advances, a number of new transportation use cases are expected to emerge around the type of vehicle ownership, what is transported, and where and when the vehicle can operate. We believe that the most important factors in operating AMaaS networks will be the technology that powers the vehicles, as well as the scale of the network which will influence the availability of vehicles. As fleet operators increase network scale and availability of vehicles, the value of the platform to the user base will rise. We believe that mobility supply is developing in two main segments - automated public transport operators and automated transportation network companies - with very few companies able to operate within both over the long-term. It is our view that a flexible solution that supports both consumer AVs and AMaaS will be necessary to reach the full potential of autonomous driving over the long-term.

Challenges to Making Autonomous Vehicles Ubiquitous

To make autonomous vehicles at scale a reality, we believe that there are three core challenges that must be addressed beyond optimization of safety and performance:

- **Regulatory Endorsement** - Autonomous driving solutions must be architected, by design, to be verifiably safe, in a manner that fosters broad societal and regulatory endorsement. Regulation is an often-overlooked factor. While laws and regulations are specific to human drivers, there are challenges to balance safety and practicality of an AV in a manner that is acceptable to society. We believe it will be easier to develop laws and regulations governing a fleet of robotaxis than privately owned vehicles. A fleet operator would receive a limited license per use case, per geographic region and will be subject to extensive reporting and back-office remote operations. In contrast, licensing AVs to consumers would require a complete overhaul of the complex laws and regulations that currently govern drivers. Autonomy must wait until regulation and technology reach an equilibrium, which we believe will first be achieved through AMaaS deployments. Self-driving regulation is inherently complicated, and driving policy depends on “what would happen next” reasoning, which is not factual. Two humans might provide two different answers when asked whether an AV should yield to a car at an intersection or take the right of way. As a result, there is no clear definition of “error,” but rather, it is open to interpretation or depends on after-the-fact judgment. All motor vehicle drivers owe a duty of care to other road users, and autonomous vehicles will need to be held to the same standard. Statistically, autonomous vehicles should be safer than human drivers. For driving policy, however, being “safer” does not always mean being better. As a society, we balance safety and practicality by determining what the “reasonable risk” we are willing to take is, and this is the type of question regulators will be required to address when licensing autonomous vehicles to navigate our roads.

- **Geographic Scale** - Geographic scale refers to the challenge of creating high-definition maps with great detail and accuracy through our REM™ technology, and keeping those maps continuously updated, which is crucial for series production AVs. AMaaS vehicles can be confined to geofenced areas, which allows AVs to reach prominence through the robotaxi industry before expanding the ODD to outside of those areas. While robotaxi operators may be successful providing their services in limited geofenced areas, broad-based consumer AV adoption requires the ability to drive safely anywhere, and in diverse environments, rather than only in geofenced areas. In 2024 alone, we collected 29.6 billion miles of road data from, based on our estimates 3 million REM™-enabled vehicles worldwide, and analyzed up to 62.4 million miles of road data per day, with the size of the REM™-enabled fleet increasing daily. Since we deployed REM™ in 2018, we have harvested a total of 56.6 billion miles of road data. As of December 28, 2024, we estimate that the data we have accumulated covers over 95% of the approximately 0.8 million miles of motorway, trunk, and primary road types in each of the United States and Europe, respectively, as well as a large majority of other road types. This data enables us to create robust high definition maps to support solutions across the product spectrum from Cloud-Enhanced ADAS™ to Mobileye Surround ADAS™ and Mobileye SuperVision™ to Mobileye Chauffeur™ and Mobileye Drive™.

- **Cost** - The cost of a self-driving system commonly employed by robotaxis, with its cameras, radars, specialized lidars, and high-performance computing is currently in the tens of thousands of dollars. This cost level is acceptable for the monetization model of a driverless ride-hailing service, but is far too expensive for series-production passenger cars. In order for autonomous driving consumer vehicles to scale in volume, we believe the cost of the self-driving system needs to be reduced significantly, such as to several thousands of dollars, an order of magnitude lower than the cost of market solutions to date. The ability to scale at low-cost, both from the on-board technology perspective and the cost of mapping, is critical to the mass adoption of AVs. AVs need to be safe, yet affordable, to achieve adoption among individuals and not just fleet operators.

Our Competitive Strengths

We believe that our leadership in ADAS and autonomous driving is based primarily on our: (1) first-mover advantage; (2) technology, including differentiated technological cores and solution architectures; (3) comprehensive portfolio of solutions; (4) delivery, including agility, response times, and time-to-market; and (5) inherent cost-driven advantages. These significant advantages form the basis for our competitive strengths described below:

- **Coupling of software and hardware delivers optimized performance and efficiency** - We design our own purpose-built SoCs and develop a software stack to optimally match the architecture of the SoCs. This results in an optimized cost/performance paradigm, allowing for a range of products that can be produced at high volume. We continue to innovate in this area; for example, our latest SoC, the EyeQ™6 High, achieves a ten-fold increase in frames-per-second processing as compared to our EyeQ™5 High SoC, with only a two-times increase in overall processing power and 25% increase in power consumption. Our coupled software and hardware architecture is highly differentiated from general purpose SoCs and software stacks that are not optimized for a specific use case. Our approach results in low power consumption and lean compute, yet is able to support a very powerful range of solutions for the ADAS and AV markets. The principle of efficiency permeates the overall solution design, including our Compound AI system architecture, which includes our True Redundancy™ approach, with multiple separate subsystems to increase robustness and simplify validation efforts, and RSS, which separates the perception system’s validation from the driving policy system, and allows for a compute-efficient driving policy. Each of these are critical contributors to achieving efficient solutions.

- **Scalable EyeQ™ SoC design addresses the entire spectrum of ADAS and autonomous driving** - Our proprietary accelerator cores are optimized for a wide variety of computer vision, signal processing, and machine learning tasks, including deep neural networks. Our EyeQ™ architecture is highly scalable, powers our solutions, ranging from our base ADAS to highly advanced autonomous driving solutions, and is designed to support the increasingly computationally intensive demands of ADAS and autonomous driving solutions on the same architecture.

- **Industry leading computer vision capabilities** - ADAS solutions are responsible for saving lives and must meet very high-performance metrics with extreme levels of efficiency, and pass increasing oversight from regulatory bodies - “good enough” is simply not acceptable. We are a technology leader for computer vision solutions for ADAS, and we have continuously enhanced our leadership position through our ability to meet the extreme performance, accuracy, and cost metrics of our OEM customers. Our products primarily use monocular camera processing that works accurately alone, or together with radar and lidar for redundancy. We have been responsible for many “industry first” launches using monocular vision processing. These include forward collision warning, automatic emergency braking, pedestrian detection, hands-free driving, and numerous other advanced functions based solely on computer vision. We have pioneered many computer vision features such as deep networks for the discovery of “free space” or the space available to the vehicle to drive in, so that a vehicle can determine a driving path. We have enhanced our computer vision capabilities over time to include multiple cameras such as the trifocal camera configuration (three cameras with different fields of view placed side-by-side facing forward), which has been in series production since 2018, and the 11-camera configuration on our Mobileye SuperVision™ solution, which was launched in late 2021.

- **We offer solutions for developing and deploying differentiated features on top of EyeQ™ SoC** - Our platform is modular by design, enabling our customers to productize our most advanced solutions today and then leverage those investments to launch even more advanced systems in a modular and incremental manner. Our systems are also highly customizable, which allows our customers to benefit from our cutting-edge, verified, and validated core technologies such as computer vision, radar, and lidar processing, Compound AI system architecture (including True Redundancy™), REM™ mapping, and driving policy, while enabling our customers to augment and differentiate their offerings. Customization on top of these core technologies comes primarily through Mobileye DXP, which is a software platform that enables automakers to build from Mobileye’s proven autonomous technology framework to create differentiated products and customized automated driving experiences while supporting faster time-to-market and reducing overall execution risk. Mobileye DXP was designed by separating the universal aspects of driving policy, such as integration with perception, providing safe decision-making actions, and predicting intentions of other road users, from the unique aspects of the driving experience, or “how” the vehicle executes specific scenarios. This approach enables a middle ground between traditional black box (*i.e.*, “closed”) and software development kit (SDK) (*i.e.*, “open”) strategies, satisfying automakers’ desire to control and differentiate the overall driving experience—including how the vehicle responds to traffic signals, other vehicles on the road, take-way or give-way choices, and more. Additionally, automakers can also set specific response parameters for factors like geography, regulations, road type or weather conditions. DXP supports efficient, successive software updates based on automaker roadmaps, as the safety critical elements, like sensing, environmental perception, and driving policy, remain static.

- **“Scale by design” approach** - Our technology platform is built to deliver autonomous driving solutions at scale by leveraging our REM™ mapping technology, which allows our solutions to be driven without the limitations of geofencing; our True Redundancy™ approach, which allows for cost-efficient validation; our RSS and driving policy, which provides a framework for regulatory certainty and lean compute that is critical for mass-deployment; and, our active sensor architecture based on our imaging radars, which we expect will help support cost-efficient consumer AV production at scale in the future.

- **Autonomous driving-ADAS synergies** - The autonomous driving-ADAS interplay, which is borne out of our Compound AI architecture (including True Redundancy™), is bi-directional: advanced technologies transfer from autonomous driving to ADAS and significantly enhance our market proposition, and in turn, these advanced autonomous driving technologies are validated in commercial, mass market ADAS deployments and contribute to the process of verifying and validating the various elements of our autonomous driving solution stack. Moreover, our scalable architecture provides our OEM partners with operational efficiencies as modular technology platform architecture minimizes the OEMs’ integration and validation burden as our solutions can be seamlessly deployed across multiple vehicle segments.

- **Road Experience Management™ creates a powerful network effect and long-term competitive advantage** - Our REM™ system is a crucial ingredient that we believe allows for: (1) defining a new category of cloud-enhanced ADAS that we call Cloud-Enhanced ADAS™, where information in Mobileye Roadbook™ enhances existing ADAS functions such as lane keeping assist and lane-centering and allows for new functions such as the analysis of behavior patterns in intersections and near traffic signs and lights; (2) evolving ADAS to an eyes-off/hands-off point-to-point assisted driving navigation system; and (3) the scale deployment of AV. REM™ is complex, requiring advanced processing at the edge (for creating processed data to be sent to the cloud and for localizing the vehicle at centimeter-level accuracy in Mobileye Roadbook™), and computationally intensive processing in the cloud to build Mobileye Roadbook™ from billions of data packets sent from millions of vehicles - all automatically. REM™ benefits from a powerful network effect, where more vehicles with REM™ enabled technology from which we are able to collect and process data, not only improves our own solutions, but also delivers benefits to our customers and to consumers through greater safety and expanded functionality. We believe this network effect creates a powerful competitive advantage, particularly given our leadership position in ADAS, as we are able to efficiently collect large amounts of data from our consumer solutions already deployed on roads globally through their regular use. Our REM™ maps are a critical component that supports our SuperVision™ product's ability to operate across a wide ODD and, therefore, the modular process of expanding this technology to eyes-off/hands-off Chauffeur products for a defined ODD. Further, our REM™ maps support our ability to deploy our AMaaS technology in new cities and geographies quickly.

- **Data and technology advantage** - Developing effective ADAS technology is technologically complex, and requires the development of large validation datasets in order to train the required software algorithms effectively, a long-term commitment to validation and qualification with an OEM before series production can even begin, and significant financial resources. We have assembled a substantial dataset of real-world driving experience, encompassing hundreds of petabytes of data, which includes tens of millions of clips collected over decades of driving on urban, highway, and arterial roads all over the world that enable us to develop and continuously improve advanced computer vision algorithms to fit road scenarios and use cases that our system encounters. We have developed sophisticated 2D and 3D automatic-labeling methodologies that, together with a team of thousands of external specialized annotators, allow for fast development cycles for our computer vision engines based on the dataset we have. In addition, our advanced data labeling infrastructure and data mining tools can unlock significant data-driven insights. In parallel, we have created a rich dataset of roads driven from over 3 million REM™-enabled vehicles worldwide that we estimate covers over 95% of the approximately 0.8 million miles of motorway, trunk, and primary road types in each of the United States and Europe, respectively, as well as a large majority of all other road types. We apply a series of on-cloud algorithms to build this crowd-sourced data into a high-definition, rapidly updating map that contains a rich variety of information, including road geometry, drivable paths, common speeds, right-of-way, and traffic light-to-lane associations. Our REM™-enabled solutions continuously harvest high-precision data that is analyzed in the cloud, creating a large repository of real-world data from the analysis of tens of millions of miles of road data per day, varying by road types and geography. This data enables us to create robust high definition maps to support solutions across the product spectrum from Cloud-Enhanced ADAS™ and Mobileye Surround ADAS™ to Mobileye SuperVision™ to Mobileye Chauffeur™ and Mobileye Drive™. These two datasets create powerful network effects as we seek to continually improve our solutions as more vehicles are deployed with our technology.

- **RSS: Our Technology Safety Concept for Deploying AV at Scale** - Responsibility Sensitive Safety (“RSS”), published in 2017, is a key component of our safety model, intended to specifically address the regulatory and public debate regarding, and enable the acceptance of, eyes-off/hands-off autonomous solutions. It is a formal, explicit, machine interpretable model governing the safety of our autonomous driving solutions’ driving policy. RSS articulates a set of plausible-worst-case assumptions regarding the behavior of other road-users, thereby enabling assertive, human-like driving while rigorously respecting the boundary between safe driving decisions and dangerous, risk-inducing ones. By doing so, it provides a deterministic model for safe driving decisions. As such, RSS further gives regulators and industry participants a framework for standardizing autonomous driving decision-making safety. RSS is also the key enabler of our lean compute driving policy design, as we distinctly separate comfort driving strategies and tactics from safety-related inhibitions and adjustments. RSS has inspired a global standardization effort of AV safety including IEEE 2846, an industry working group that we lead. We first published our RSS model in 2017, setting another example of our industry leadership in addressing one of the key issues to enable regulatory and public acceptance of eyes-off/hands-off autonomous solutions at scale.

- RSS is the key enabler of our lean compute driving policy design, where we distinctly separate driving comfort features from safety-related inhibitions and adjustments. Our framework monitors and establishes driving policy by identifying intentions in order to only predict the plausible actions of road users, significantly reducing possible options and computational demands. Our RSS-based driving policy is designed for global deployment, as it does not need to be tailored to specific driving cultures.

- **Purpose-built imaging-radar unlocks consumer AV at scale** - We have developed software-defined imaging-radar with cutting-edge dynamic range and resolution. Our differentiated True Redundancy™ architecture, which is adaptable to different lidar architectures, will leverage our imaging-radar, which we believe will give us the ability to significantly reduce the cost of the overall sensor suite by replacing multiple, expensive lidars around the vehicle, with only a single front-facing lidar sensor, which we believe will support consumer AV production at scale.

- **Deep, collaborative ecosystem relationships** - Our deep global relationships with key partners across the value chain, from component suppliers, through Tier 1 customers and up to OEMs, offer us a broad and diverse set of collaboration opportunities for high-performance computing, networking, and advanced packaging technologies, among others, from the vehicle to the cloud. Together with our partners, we believe that we can accelerate the pace of autonomous innovation and market adoption.

Our Growth Strategies

Key levers of our growth strategy are:

- **Benefit from regulatory and safety rating changes promoting base ADAS** - We intend to continue to lead and deliver upon global regulatory and safety requirements for base ADAS features by maintaining and enhancing our vision only solution. We expect a strong increase in base ADAS fitment rates due to global regulatory and safety requirements, as OEMs move to adopt standard ADAS technology for the vast majority of new model launches. We plan to continue to leverage our technology leadership and strong customer relationships to position us for additional design wins with high production volumes. We believe that our comprehensive stack of solutions and proven success at scale will enable us to further solidify our industry leadership.

- **Capitalize on Cloud-Enhanced ADAS™ features** - We have pioneered a cloud-enhanced ADAS solution, which offers customers using advanced EyeQ™ versions (EyeQ™4 and above) a significant value through our REM™ technology. Our Cloud-Enhanced ADAS™ solution is capable of utilizing our EyeQ™ SoCs and entry level camera technologies to deliver feature enhancements over time. Our premium Cloud-Enhanced ADAS™ features range in complexity from all road-type lane keeping assist and lane centering, to Cross-Junction Assist, to Traffic Jam Assist. We will continue to grow the depth and breadth of our REM™ maps in order to deliver leading ADAS capabilities. In the future, we plan to create revenue streams from our OTA capabilities and REM™ maps through solution upgrades.

- **Further enhance and drive adoption of our Premium Driver Assist solutions** - Our Mobileye SuperVision™ solution represents a comprehensive eyes-on/hands-off ADAS solution. After the initial launch by the Geely Group's premium electric vehicle brand, ZEEKR, we have successfully executed a series of software updates and also achieved a series of production program awards with Volkswagen Group that increased substantially the number of vehicle models in our future launch pipeline. During 2024, we made significant progress towards additional design wins for SuperVision throughout our top OEM customers. Our validated SuperVision™ technology can serve as the foundation to enable eyes-off/hands-off capabilities in a modular way. In addition, our Mobileye SuperVision™ configuration of sensors and compute can also be transformed into an effective "360 guardian," helping the driver avoid accidents, as referenced in our Vision Zero publications. We believe that Mobileye SuperVision™ has the potential to transform ADAS at its core, potentially leading to adoption driven by regulatory requirements and safety ratings of a Mobileye SuperVision™-like solution in its own category, similar to how safety-ratings and regulation have driven the adoption of base ADAS beginning in 2014.

Additionally, we added a new innovative Premium ADAS solution, Mobileye Surround ADAS™, which utilizes the SuperVision™ software stack with a down-scaled sensor suite and an ECU that includes one EyeQ™6 High SoC. The solution will enable eyes-on/hands-off driving on highway road types (as compared to SuperVision™ which is expected to operate on various ODDs). Mobileye Surround ADAS™ will provide OEMs with higher levels of autonomy than Cloud-Enhanced Driver Assist™, which we believe will expand the application and adoption of our products.

Our Premium Driver Assist offerings are expected to be available with DXP, which will enable OEM customers to deploy their own internally-developed software on our EyeQ™ SoCs while benefiting from our industry-leading technology platform.

- ***Innovate and commercialize our next-generation autonomous driving solutions*** - Propelled by our next generation EyeQ™ SoC, our surround computer vision Mobileye SuperVision™ solution, productization of software-defined imaging radars and our Compound AI system architecture including True Redundancy™, we believe that we will be positioned to deliver an autonomous driving solution that can enable the mass adoption of AV. We plan to continue to develop innovative and cost-optimized solutions to deliver comprehensive capabilities for mass market adoption to our customers. We believe the introduction of our Premium ADAS capabilities with our launched Mobileye SuperVision™ solution, which can be scaled to a variety of Mobileye Chauffeur™ consumer AV solutions, and our eyes-off/hands-off/no driver capabilities with Mobileye Drive™ will help us continue to provide our customers with innovative solutions and enable further growth for us. The favorable view of Chauffeur eyes-off technology by automakers is based on two key factors: 1) Chauffeur adds “buying your time back” as an additional value proposition on top of the safety and convenience benefits of SuperVision™; and 2) the sharing of tech building blocks between SuperVision™ and Chauffeur creates a scalable bridge from one to the other, significantly lowering the investment needs and raising the probability of success for a consumer AV product. We plan to continue to build and enhance our full-stack technology platform in order to offer an affordable, time-saving and much safer driving experience, which we believe will propel the mass-market adoption of autonomous driving solutions.

- ***Utilize our flexible platform to expand our collaboration with our OEM customers*** - We have designed our EyeQ™5 SoCs and subsequent generations to be increasingly customizable by our OEM customers, supported by DXP. DXP enables automakers to develop and customize the driving experience while utilizing Mobileye’s proven core technology perception and driving software - allowing our customers to create unique products from our technology while accelerating time-to-market and reducing overall execution risk. We plan to continue to develop our platform to offer our customers the ability to seamlessly address the additional capabilities and features that they demand by customizing their offerings on top of our solutions. This collaborative addition to our platform offer a mutually beneficial middle ground between open and closed systems, which will allow OEMs to innovate on top of our platform, augmenting and differentiating their offerings, while benefiting from our cutting-edge, verified and validated core technologies such as computer vision, true redundancy perception, REM™ mapping and driving policy.

- ***Capitalize on our active sensor technology*** - We intend to continue to develop and commercialize next-generation active sensors such as software-defined imaging radars, which leverage our AI capabilities. Our software-defined imaging radars are designed to form a standalone “sensing state” layer which can be utilized as a sensing layer on its own, enabling 360-degree coverage, replacing multiple lidar sensors and requiring only a single front-facing lidar. We believe enhancing our sensing and perception technology leadership will further strengthen our competitive position and allow us to offer additional differentiated and cost-effective solutions to our customers.

- ***Accelerate our roadmap of next generation proprietary EyeQ™ SoCs*** - We believe that we have created the standard for processors focused on Compound AI systems that control perception, including computer vision. Our EyeQ™ SoCs are purpose-built for sensing and perception technologies and optimized for high throughput and power efficiency. We intend to continue to accelerate our technology leadership with a focus on silicon, packaging, and systems level needs to deliver cost-efficient processing at the edge. EyeQ™6 High will be built to address the needs of eyes-on/hands-off and eyes-off/hands-off solutions in a scalable way. Our architecture is highly scalable and is designed to support the increasing and computationally intensive demands of future autonomous driving applications.

- ***Utilize our substantial and growing dataset to continuously improve the intelligence and robustness of our solutions*** - We will continue to grow the depth and breadth of our substantial dataset. We believe that our ability to use this data to create, maintain, and improve our Compound AI systems and high-precision REM™ maps through our REM™ mapping system will enable us to further improve our ADAS offerings and position us well for autonomous driving.

- ***Establish our Eyes-Off/Hands-Off autonomous and AMaaS solutions*** - We believe that Mobileye Chauffeur™ and Mobileye Drive™ will unlock new use cases and end-consumers for our OEM and fleet-owner customers, which will be applicable for both the AMaaS and consumer AV markets. We expect, in collaboration with our customers, to add additional cities to our AMaaS offerings to showcase our industry-leading technology and to help accelerate the pace of AV adoption. We also expect to continue to invest in our ecosystem partnerships with OEMs and transportation network companies in order to foster close collaboration and further commercialize our autonomous technologies.

- **Benefit from opportunities in large emerging markets** - We intend to continue to invest in customer relationships in emerging markets to accelerate ADAS and autonomous driving adoption, particularly in India. Mahindra & Mahindra, one of India's largest automakers, has launched the first vehicle made locally to offer ADAS capabilities, which is powered by our EyeQ™ SoC. Its accessible price point compared to imported alternatives expands the ADAS reach to a broader range of consumers in one of the most populous countries in the world. We believe our long-term partnerships with emerging market OEMs position our solutions at the forefront of continued innovation and market growth.

Our Customers

Our customers include leading OEMs, which we primarily sell to through Tier 1 automotive suppliers that implement our product into automotive vehicles, as well as fleet owners and operators.

OEMs

Our market position has remained strong across a broad set of customer relationships for many years. We are actively working with more than 50 OEMs worldwide on the implementation of our ADAS solutions.

Tier 1 Automotive Suppliers

We supply certain OEMs with the EyeQ™ platform through our arrangements with automotive system integrators, known as Tier 1 automotive suppliers, which are direct suppliers to OEMs. Our Tier 1 customers include Aptiv, Magna, Valeo, ZF, Imotion and others.

Mobility-as-a-Service

We expect to sell the Mobileye Drive™ self-driving vehicles to a range of transportation network companies, public transit operators and vehicle OEMs which intend to operate a variety of services (e.g., consumer-facing AMaaS, transportation on demand, delivery). These partners could produce vehicles themselves and integrate Mobileye Drive™ with our assistance.

Our Partnerships with STMicroelectronics and Intel

Our long-standing relationship with STMicroelectronics N.V. ("STMicroelectronics") continues to strengthen with the complexity of our solutions. Our partnership includes close collaboration in product development, design, and manufacturing. For example, we have co-developed six EyeQ™ generations, including the EyeQ™6. We also benefit from STMicroelectronics' advanced packaging and testing capabilities and automotive expertise. Together with STMicroelectronics, we are working on developing and productizing next-generation automotive-grade technology for high volume automotive applications, which we believe will accelerate the pace of autonomous innovation and market adoption.

Our close partnership with Intel exists on multiple fronts. As a result of our relationship with Intel, we have access to certain technologies that support design and development of our software-defined radar, including Intel's mmWave technologies. Additionally, we intend to explore a collaboration with Intel on a technology platform to integrate our EyeQ™ SoC with Intel's market-leading central compute capability, with plans to utilize Intel Foundry Services' advanced packaging capabilities. This potential platform is intended to enable functions essential to safety, entertainment, and cloud connectivity. Intel's strength in government affairs and policy development around the world will continue to be of significant value to us as we collaborate with regulators who are preparing frameworks to enable commercial deployment of AVs.

Manufacturing

Our products are designed and manufactured specifically for automotive applications after extensive validation tests under stringent automotive environmental conditions.

We partner with STMicroelectronics, a leading supplier and innovator of semiconductor devices for automotive applications, in manufacturing, design and research and development. We have co-developed six generations of our automotive grade SoC, EyeQ™, with STMicroelectronics including EyeQ™5 and EyeQ™6. We design the front-end and STMicroelectronics designs the back-end package and also includes testing, quality assurance, customer care, failure analysis and manufacturing standards. All of our EyeQ™ integrated circuits are manufactured by or outsourced to a partner foundry by STMicroelectronics.

We have also established a relationship with Quanta Computer and other suppliers to develop and assemble our ECUs including our reference design for our Mobileye SuperVision™ solution, which includes our EyeQ™5 SoCs from STMicroelectronics.

Regulation and Ratings

Automobile safety is driven by both regulations and the availability to consumers of independent assessments of the safety performance of different car models. These assessments have encouraged OEMs to produce cars that are safer than those required by law. In many countries, these NCAPs have created a “market for safety” as car manufacturers seek to demonstrate that their models satisfy the various NCAPs’ highest ratings.

National NCAPs will continue to add specific ADAS applications to their evaluation items over the next several years, led by the Euro NCAP. In the EU, pre-market approval is required for all vehicles sold, and many manufacturers choose to satisfy a set of technical criteria determined by the Euro NCAP. The Australian, Japanese, and Korean NCAPs’ have fully harmonized their policies with the Euro NCAP. In the United States, ADAS regulation continues to make large strides. For example, the INVEST in America Act, which was passed in late 2021, requires the U.S. Department of Transportation to issue requirements and standards regarding vehicle safety technologies. On the AV front, our RSS driving policy provides a cornerstone for global standardization efforts of the safety of assisted and automated driving, in particular IEEE 2846, a working group of approximately 30 organizations in the industry that we lead.

At the federal level in the United States, the safety of motor vehicles is regulated by the U.S. Department of Transportation through two federal Agencies - the National Highway Traffic Safety Administration (the “NHTSA”), which regulates all motor vehicles, and the Federal Motor Carrier Safety Administration (the “FMCSA”), which regulates commercial motor vehicles. NHTSA establishes the Federal Motor Vehicle Safety Standards (the “FMVSS”) for motor vehicles and motor vehicle equipment and oversees the actions that manufacturers of motor vehicles and motor vehicle equipment are required to take regarding the reporting of information related to defects or injuries related to their products and the recall and repair of vehicles and equipment that contain safety defects or fail to comply with the FMVSS. FMCSA regulates the safety of commercial motor carriers operating in interstate commerce, the qualifications and safety of commercial motor vehicle drivers, and the safe operation of commercial trucks.

While there are currently no mandatory federal U.S. regulations expressly pertaining to the safety of autonomous driving systems, the U.S. Department of Transportation has established recommended voluntary guidelines, and the NHTSA or the FMCSA, as applicable, have authority to take enforcement action should an automated driving system pose an unreasonable risk to safety or inhibit the safe operation of a motor vehicle. Certain U.S. states have legal restrictions on autonomous driving vehicles, and many other states are considering them. These variations increase the legal complexity of deploying our solutions. If discrepancies emerge in the legal restrictions adopted by different U.S. states, our plan is to develop our technology to comply with the strictest standards. We will continue to actively monitor regulatory developments in the U.S. and intend to adjust our products and solutions as needed.

In Europe, certain vehicle safety regulations apply to self-driving braking and steering systems, and certain treaties also restrict the legality of certain higher levels of autonomous driving vehicles. In jurisdictions that follow the regulations of the United Nations Economic Commission for Europe, some regulations restrict the design of advanced driver-assistance or self-driving features, which can compromise or prevent their use entirely. Other applicable laws, both current and proposed, may hinder the path and timeline to introducing self-driving vehicles for sale and use in the markets where they apply. Other markets, including China, continue to consider self-driving regulation. Any implemented regulations may differ materially from those in the United States and Europe, which may further increase the legal complexity of self-driving vehicles and limit or prevent certain features. Autonomous driving laws and regulations are expected to continue to evolve in numerous jurisdictions in the United States and foreign countries and may create restrictions on autonomous driving features that we develop.

In order for us to operate in international markets outside the United States, we must comply with relevant legal regulations regarding autonomous vehicles as well as technology export control, data security, cybersecurity and other related regulations that apply to global technology companies. We have developed robust compliance processes and procedures related to these regulatory requirements and believe that we are in compliance with such requirements.

On October 7, 2022, the U.S. Department of Commerce’s Bureau of Industry and Security (“BIS”) announced restrictions on the export of advanced computing integrated circuits and related items to China and certain other jurisdictions. Based on our existing customer base and the export classifications for our existing chip products, we do not believe that these U.S. export controls will have a material impact on our sales of these products to our existing customers in China. In 2023, BIS added to these restrictions and the U.S. also worked with Japan and the Netherlands to align on additional restrictions on semiconductor manufacturing equipment. In 2024, BIS further expanded export controls to limit the global distribution of high-performance integrated circuits by restricting sales through customer allocations and imposing per-country caps. Further, on January 14, 2025, BIS announced the adoption of a final rule prohibiting certain transactions involving the sale or import of (i) connected vehicles integrating “Vehicle Connectivity System” hardware, and (ii) connected vehicles integrating “Automated Driving System” or “Vehicle Connectivity System” software, or those components sold separately, in each case with a sufficient nexus to the People’s Republic of China or Russia. The software provisions of the final rule and the prohibition on sales of connected vehicles will take effect for model 2027 and the hardware-related prohibitions will take effect model year 2030, or January 1, 2029 for units without a model year. We are developing compliance processes for these new rules and expect to be compliant when these restrictions are effective. Import and Export control regulations adopted by the United States and other jurisdictions are subject to change and interpretation, and it is possible that future regulatory actions by BIS impacting U.S. imports and exports of integrated circuits as well as certain software and hardware components used in our systems and related items could have a material impact on our business operations.

Data Privacy

Privacy is fundamental to Mobileye. We collect, process, transmit, and store personal information in connection with the operation of our business and are subject to a variety of local, state, national and international laws, directives and regulations that apply to the collection, use, retention, protection, security, disclosure, transfer and other processing of personal data in the different jurisdictions in which we operate. Data collected by the camera of our solutions during the development cycle of a project may include personal information such as license plate numbers of other vehicles, facial features of pedestrians, appearance of individuals, GPS data, and geolocation data in order to train the data analytics and AI technology equipped in our solutions for the purpose of identifying different objects and predicting potential issues that may arise during the operation of a motor vehicle. We anticipate that our collection of such personal information may increase as a result of the introduction of our MaaS solutions, and our integration of Moovit, which may provide us with access to personal information of users. Our data-collection processes implement strict methodologies to comply with data protection and privacy laws, including the EU General Data Protection Regulation (the “GDPR”), the UK General Data Protection Regulation, and U.S. federal and state laws, including the California Consumer Privacy Act of 2018 (the “CCPA”), as amended by the California Privacy Rights Act of 2020 (the “CPRA”).

We leverage systems and applications that are spread over the countries in which we do business, requiring us to regularly move data across national borders. As a result, we are subject to a variety of laws and regulations in the United States, China, the European Union, and other foreign jurisdictions as well as contractual obligations, regarding data privacy, protection, and security.

The scope and interpretation of the laws and regulations that are or may be applicable to us are often uncertain and may be conflicting, particularly with respect to foreign laws. We are subject to the GDPR, which became effective in May 2018. EU member states have enacted certain implementing legislation that adds to and/or further interprets the GDPR requirements. The GDPR, together with national legislation, regulations and guidelines of the EU member states governing the processing of personal data, impose strict obligations and restrictions on the ability to collect, use, retain, protect, disclose, transfer, and otherwise process personal data with respect to EU data subjects. In particular, the GDPR includes obligations and restrictions concerning the consent and rights of individuals to whom the personal data relates, the transfer of personal data out of the EEA, security breach notifications and the security and confidentiality of personal data. We are also subject to the UK General Data Protection Regulation (*i.e.*, a version of the GDPR as implemented into UK law), exposing us to two parallel regimes with potentially divergent interpretations and enforcement actions for certain violations. While the European Commission issued an adequacy decision in respect of the UK’s data protection framework, enabling data transfers from EU member states to the UK to continue without requiring organizations to put in place contractual or other measures in order to lawfully transfer personal data between the territories, that decision will sunset in June 2025 unless extended and it may be revoked in the future by the European Commission if the UK data protection regime is reformed in ways that deviate substantially from the GDPR. Other countries have enacted or are considering enacting similar cross-border data transfer rules or data localization requirements.

Additionally, U.S. state governments have enacted new data protection and privacy laws and regulations since 2018, including California, Colorado, Connecticut, Delaware, Iowa, Texas, Utah and Virginia. These new state laws and regulations may impact our business practices, including limiting our ability to use clips for internal development and validation purposes. Federal and state laws and regulations are changing rapidly and there is discussion in Congress of a new federal data protection and privacy law to which we would become subject if it is enacted. Compliance with these federal and state data protection and privacy laws and regulations, and other similar federal or state laws and regulations that may be enacted in the future, may require us to put in place additional mechanisms to comply with such laws and regulations which could cause us to incur substantial costs or require us to change our business practices, including our data processing practices, in a manner adverse to our business. Moreover, any failure to comply with such federal and state laws and regulations could result in, among other things, regulatory or government investigations, monetary penalties or fines, litigation (including civil claims, such as representative actions and other class action-type litigation), and orders to cease, modify or change our business practices, including our data processing practices.

In China, the PRC Cyber Security Law became effective on June 1, 2017. The Cyber Security Law reaffirms the basic principles and requirements specified in other existing laws and regulations on personal information protection, such as the requirements on the collection, use, processing, storage, and disclosure of personal information. Specifically, it requires that network operators take technical measures and other necessary measures in accordance with applicable laws and regulations and the compulsory requirements of the national and industrial standards to safeguard the safe and stable operation of its networks, maintain the integrity, confidentiality, and availability of network data, take technical and other necessary measures to ensure the security of the personal information they have collected against unauthorized access, alteration, disclosure, or loss, and formulate contingency plans for network security incidents and remediation measures. It also requires a subset of network operators that meet certain thresholds to be critical information infrastructure operators (“CIIO”) to store personal information and important data collected and generated during its operation within the territory of China locally on servers in China.

Our Competition

The ADAS and autonomous driving industries are highly competitive. In the ADAS and consumer AV market, we face competition primarily from other external providers including Tier 1 automotive suppliers and silicon providers, as well as in-house solutions developed by the OEMs to a certain extent. Our Tier 1 customers may be developing or may in the future develop competing solutions. For example, certain of our competitors have announced that they are operating autonomous robotaxis. Tier 1 automotive supplier competitors include Bosch, Continental, and Denso. Our silicon provider competitors include Ambarella, Advanced Micro Devices, Arriver / Qualcomm, Black Sesame Technologies, Horizon Robotics, Huawei, NVIDIA, NXP, Renesas Electronics, and Texas Instruments. OEMs who have or are pursuing their own in-house solutions are also indirect competitors, with Tesla and Mercedes-Benz being examples of automakers taking that approach today, with others such as General Motors, NIO, Volvo Cars, Xpeng Motors, Huawei and Li Auto also pursuing in-house solutions for portions of the advanced ADAS software stack. In the future, our indirect competitors could become direct competitors.

In the autonomous driving market, including AMaaS and consumer AV, we face competition from technology companies, internal development teams from the automakers themselves, sometimes in combination with investments in early-stage autonomous vehicle technology companies, Tier 1 automotive companies, as well as robotaxi providers. AMaaS competitors include Cruise, Motional, Waymo, Yandex, and Zoox in the United States and Europe and Auto X, Baidu, Deeproute.ai, Didi Chuxing, Momenta, and WeRide in China. Consumer AV competitors include Sony and Tesla, who are developing self-driving vehicles for consumers. We also face competition from companies that offer “software-only” autonomous vehicle solutions, including StradVision, Autobrains and Wayve.

Developing effective ADAS technology is technologically complex, requires the development of large validation datasets in order to train the required software algorithms effectively, requires a long-term commitment to validation and qualification with an OEM before series production can even begin, and requires significant financial resources. In addition, our tightly coupled software and hardware solutions, which are based on highly advanced, road-tested, sensing and perception technologies from decades of leadership in artificial intelligence (“AI”), including computer vision, and powered by our mission critical software and purpose-built EyeQ™ family of SoCs are extremely hard to replicate.

Moovit competes against urban mobility applications and MaaS solutions which provide transportation services and navigation data to consumers. Moovit’s free and subscription-based application competition includes Alphabet, Apple, Citymapper, and Transit. Moovit’s application also competes with local urban and inter-city ticketing service providers that provide purchase and ticketing of public transit and mobility services on their own platform.

The principal competitive factors impacting the market for our solutions include:

- completeness of our technology platform including SoCs, sensing and perception technologies, sensor fusion architecture, high-precision mapping system, and supporting software and algorithms;
- ability to design and develop ADAS and autonomous driving solutions that meet our customers' needs;
- automotive quality standards, compliance, and performance in all areas of ADAS and autonomous driving;
- agile software validation and robust product release discipline;
- scalability, and cost efficiency of our solutions;
- engineering capabilities, the ability to innovate and continuously improve our technology;
- pricing;
- design and development support for our customers;
- manufacturing reliability and the ability to make on-time delivery of appropriate quantities of product at a consistent level of quality;
- ability to meet regulatory requirements;
- intellectual property protection; and
- brand and reputation, including the ability to market new offerings.

We believe we compete favorably with respect to these factors. In addition, as the ADAS and autonomous driving markets progress and, in some use cases, converge, we believe we will be in a favorable position to achieve meaningful business wins given our differentiated capabilities.

Distribution and Marketing

Our products are sold directly to customers throughout the world, or through distribution channels for our remaining inventory of aftermarket products meant for vehicles that do not come pre-equipped with ADAS technology.

We actively promote our brand and technologies to increase awareness and generate demand through direct marketing as well as co-marketing programs. Our direct marketing to consumers and businesses primarily includes trade events, industry and consumer communications and press relations. We work closely with our existing customers in order to ensure that we are aware of their requirements and plans for future car models and can respond promptly and effectively.

We regularly present our technology to regulators and safety organizations to demonstrate its capabilities and reliability and to help ensure that they develop regulations and ratings that address the full range of benefits that we believe we can offer.

Research and Development

We believe our strong research and development is our principal competitive strength and has led to our position in the market. Our research and development activities are predominantly conducted in Israel. We have approximately 85% of our full time-equivalent employees engaged in research and development, many of whom have been with the company for significant tenures. Our research and development efforts focus on algorithms, including visual processing, camera control, vehicle control, camera/radar fusion, autonomous driving sensing technologies, REM™ technology, driving policy and related engineering tasks as well as application software, silicon design and hardware electronics design. We believe we have a unique approach by developing ADAS and autonomous solutions simultaneously, giving us a technical and scale advantage over our competition.

Our Employees

As of December 28, 2024, we had approximately 3,900 employees operating across eight countries, with approximately 85% of such employees involved in research and development and approximately 3,600 of such employees operating in Israel. None of our employees is represented by a labor union with respect to his, her or their employment. In certain countries in which we operate, we are subject to, and comply with, local labor law requirements, which may automatically make our employees subject to industry-wide collective bargaining agreements. We have not experienced any work stoppages and we consider our relations with our employees to be good.

Our Employees

Intellectual Property

Our ability to compete effectively depends in part on our ability to develop and maintain the proprietary aspects of our technology. Our policy is to obtain appropriate proprietary rights protection for any potentially significant new technology acquired or developed by us. As of December 28, 2024, we held 382 U.S. patents, 74 European patents, 175 U.S. patent applications, 608 European and other non-U.S. patent applications, and provisional patent filings. We do not view any single patent or patent application to be material.

In addition to patent laws, we rely on copyright and trade secret laws to protect our proprietary rights. We attempt to protect our trade secrets and other proprietary information through agreements with OEMs, distributors, other customers and suppliers, proprietary information agreements with our employees and consultants, and other similar measures. Our primary trademarks are for our name and product names. We cannot be certain that we will be successful in protecting our proprietary rights. While we believe our patents, patent applications, software and other proprietary know-how have value, changing technology makes our future success dependent principally upon our ability to successfully achieve continuing innovation.

Litigation may be necessary in the future to enforce our proprietary rights, to determine the validity and scope of the proprietary rights of others, or to defend us against claims of infringement, misappropriation or other violation or invalidity by others. An adverse outcome in such litigation or similar proceedings could subject us to significant liabilities to third parties, require disputed rights to be licensed from others or require us to cease marketing or using certain products, any of which could have a material adverse effect on our business, financial condition, and results of operations. In addition, the cost of addressing any intellectual property litigation claim, both in legal fees and expenses, as well as from the diversion of management's resources, regardless of whether the claim is valid, could be significant and could have a material adverse effect on our business, financial condition, and results of operations.

Relationship with Intel

Prior to the Mobileye IPO, Intel beneficially owned 100% of our outstanding shares of common stock and we operated as Intel's wholly owned subsidiary. As of December 28, 2024, Intel beneficially owns all of the outstanding shares of our Class B common stock, representing approximately 87.7% of our outstanding common stock and 98.6% of the voting power of our common stock. As a result, Intel is able to control all matters submitted to our stockholders for approval, including the election of our directors and the approval of significant corporate transactions. Furthermore, in addition to any other vote required by law or by our amended and restated certificate of incorporation, until the first date on which Intel ceases to beneficially own 20% or more of our outstanding shares of common stock, the prior affirmative vote or written consent of Intel as the holder of our Class B common stock will be required in order for us to: adopt or implement any stockholder rights plan or similar takeover defense measure; consolidate or merge with or into any other entity; permit any of our subsidiaries to consolidate or merge with or into any other entity, with certain exceptions; acquire the stock or assets of another entity for consideration in excess of \$250,000,000 other than transactions in which we and one or more of our wholly owned subsidiaries are the only parties; issue any stock or other equity securities except to our subsidiaries, pursuant to the Mobileye IPO, or pursuant to our employee benefit plans limited to a share reserve of 5% of the outstanding number of shares of our common stock on the immediately preceding December 31; make or commit to make any individual or series of related capital or other expenditures in excess of \$250,000,000; create, incur, assume or permit to exist any indebtedness or guarantee any indebtedness in excess of \$250,000,000; make any loan to or purchase any debt securities of any person in excess of \$250,000,000; redeem, purchase or otherwise acquire or retire for value any equity securities of our company except repurchases from employees, officers, directors or other service providers upon termination of employment or through the exercise of any right of first refusal; take any actions to dissolve, liquidate, or wind-up our company; declare dividends on our stock; or amend, terminate or adopt any provision inconsistent with our amended and restated certificate of incorporation or amended and restated bylaws. See "Item 1A. Risk Factors — Risks Related to our Relationship with Intel and our Dual Class Structure".

We and Intel continue to interact as strategic partners, collaborating on projects to pursue the growth of computing and advanced technology in the automotive sector. In connection with the Mobileye IPO, we entered into certain agreements (collectively, the "Intercompany Agreements") with Intel and certain of its subsidiaries that provide the framework for our ongoing relationship with Intel, including the Master Transaction Agreement, which contains key provisions relating to our ongoing relationship with Intel. The Master Transaction Agreement also contains agreements relating to the conduct of the Mobileye IPO and future transactions, and governs the relationship between Intel and Mobileye. Unless otherwise required by the specific provisions of the Master Transaction Agreement, the Master Transaction Agreement will terminate on a date that is five years after the first date upon which Intel ceases to beneficially own at least 20% of our outstanding shares of common stock. The provisions related to our cooperation with Intel in connection with future litigation will survive seven years after the termination of the agreement, and certain other provisions including those related to indemnification by us and Intel will survive indefinitely.

Key provisions of the Master Transaction Agreement include: we will provide Intel with certain registration rights to register our common stock, because the shares of our common stock held by Intel after the Mobileye IPO are “restricted securities” as defined in Rule 144 under the Securities Act; we will cooperate with Intel, at its request, to accomplish a distribution by Intel of our common stock to Intel stockholders which is intended to qualify as a distribution under Section 355 of the Code, or any corresponding provision of any successor statute, and we have agreed to promptly take any and all actions reasonably necessary or desirable to effect any such distribution, in which Intel will determine, in its sole and absolute discretion, whether to proceed with all or part of the distribution, the date of the distribution and the form, structure and all other terms of any transaction to effect the distribution; so long as Intel beneficially owns at least 20% of our common stock, we will sell Intel our commercially available products, including EyeQ™ SoCs, for internal use, but not for resale on a standalone or bundled basis; we and Intel agree to hold the other in most favored status with respect to products purchased or sold for internal use, meaning that the product prices, terms, warranties and benefits provided between us and Intel shall be comparable to or better than the equivalent terms being offered by the party providing the products to any single, present customer of such party; we have granted Intel a continuing right to purchase from us shares of Class A common stock or Class B common stock as is necessary for Intel to maintain an aggregate ownership interest of our common stock representing at least 80.1% of our common stock outstanding; we and Intel have cross-indemnities that generally place the financial responsibility on us and our subsidiaries for all liabilities associated with the current and historical Mobileye business and operations, and generally will place on Intel the financial responsibility for liabilities associated with all of Intel’s other current and historical businesses and operations, in each case regardless of the time those liabilities arise, and certain other indemnities; the Master Transaction Agreement contains a general release for liabilities arising from events occurring on or before the time of the Mobileye IPO; for so long as Intel provides us with accounting and financial services under the Administrative Services Agreement that we entered into with Intel, and to the extent necessary for the purpose of preparing financial statements or completing a financial statement audit, we will provide Intel as much prior notice as reasonably practical of any change in the independent certified public accountants to be used by us or our subsidiaries for providing an opinion on our consolidated financial statements; until the later of Intel ceasing to be a “controlling person” of us as defined in the Securities Act and such date that Intel ceases to provide us with legal, financial, or accounting services under the Administrative Services Agreement, we will comply with all Intel rules, policies, and directives identified by Intel as critical to legal and regulatory compliance, to the extent such rules, policies, and directives have been previously communicated to us, and will not adopt legal or regulatory policies or directives inconsistent with the policies identified by Intel as critical to legal and regulatory compliance; for a period of two years following the closing of the Mobileye IPO, we and Intel will not, directly or indirectly, solicit active employees of the other without prior consent by the other, provided we both have agreed to give such consent if either party believes, in good faith, that consent is necessary to avoid the resignation of an employee from one party that the other party would wish to employ; all outstanding options to purchase shares of Intel and all other Intel equity awards held by Mobileye Group employees at the time of the Mobileye IPO will continue to be outstanding until the earliest of (i) the date the award is exchanged pursuant to any issuer exchange offer undertaken by us and Intel, (ii) the date the award is exercised or expires under the terms of the applicable award agreement, and (iii) the date such award is canceled as a result of a Mobileye Group employee being terminated or, if later, the end of any post-termination exercise period specified in the award agreement or by the applicable equity plans’ administrative committees; immediately after completion of the Mobileye IPO (and after giving effect to the repayment of indebtedness by us to Intel and other transactions that occurred substantially concurrently with the Mobileye IPO), Intel agreed to ensure that we had \$1.0 billion in cash, cash equivalents, or marketable securities; and Intel will use commercially reasonable efforts to provide three months’ advance notice to our board of directors in the event that Intel intends to pursue a transaction (even if no such transaction is imminent or probable at such time) which is reasonably expected to cause Intel’s ownership in us to fall below 50% of our total issued and outstanding shares of common stock.

[Table of Contents](#)

In connection with the Mobileye IPO, we entered into a LiDAR Product Collaboration Agreement with Intel and a Technology and Services Agreement with Intel pursuant to which Intel granted us a limited license to sensitive core technology relating to lidar and radar, respectively. Pursuant to the LiDAR Product Collaboration Agreement, the license was limited to a particular lidar sensor system for ADAS and AV systems in automobiles and to certain types of customers (Tier 1s, OEMs and MaaS), and we were not licensed to manufacture products based on Intel technology with anyone other than Intel. On September 9, 2024, we announced the cessation of further internal development of FMCW lidar and the wind down of our Lidar R&D Unit. In connection with our decision, Mobileye and Intel terminated the LiDAR Product Collaboration Agreement as of October 2, 2024. Pursuant to the Technology and Services Agreement, the license is limited to the development of a specific type of radar for specific applications, and any radar products that do not fall under the scope of the agreement will require a separate license from Intel, at Intel’s discretion. As a result, we will not own most new radar intellectual property, even if developed solely by us. If we are not able to continue to use or license sensitive core technology related to radar from Intel, we may not be able to secure alternatives in a timely manner or at all, and our ability to remain competitive would be harmed and that could adversely affect our business, results of operations and financial condition. See “Item 1A. Risk Factors — Risks Related to our Relationship with Intel and our Dual Class Structure — We may have conflicts of interest with Intel and, because of (i) certain provisions in our amended and restated certificate of incorporation relating to related person transactions and corporate opportunities, (ii) agreements we have with Intel in connection with the Mobileye IPO, and (iii) Intel’s controlling beneficial ownership interest in our company, we may not be able to resolve such conflicts on terms favorable to us.”

Several of our directors also serve as officers, directors and/or other positions at Intel. Mr. Yeboah-Amankwah, the Chair of our Board of Directors, is a Senior Vice President and the Chief Strategy Officer of Intel. Mr. Schell, our director, is an Executive Vice President and the Chief Commercial Officer of Intel. Ms. Pambianchi, our director, is an Executive Vice President and the Chief People Officer of Intel. Mr. Bombach, our director, is a Corporate Vice President, Assistant Secretary and Head of Corporate Legal at Intel. Mr. Yearly, our director, is the Interim Executive Chair and a director of Intel.

See the information under the heading “Item 13. Certain Relationships and Related Transactions, and Director Independence” which is incorporated herein by reference from our definitive proxy statement for the 2025 Annual Meeting of the Stockholders (the “2025 Proxy Statement”), which we expect to file with the SEC within 120 days after the end of our fiscal year ended December 28, 2024.

Available Information

Our reports filed with or furnished to the Securities and Exchange Commission (“SEC”) pursuant to Sections 13(a) and 15(d) of the Securities Exchange Act of 1934, as amended (“the Exchange Act”), are available, free of charge, on our Investor Relations website at <https://ir.mobileye.com/> as soon as reasonably practicable after we electronically file such material with, or furnish it to, the SEC. The SEC maintains an Internet site (www.sec.gov) that contains all of the documents we file with the SEC.

Information about our Executive Officers

Set forth below are the names, ages and positions as of the date hereof of our executive officers.

Name	Age	Position
Amnon Shashua	64	Chief Executive Officer, President, and Director
Moran Shemesh Rojansky	44	Chief Financial Officer
Boaz Ouriel	51	Executive Vice President, EPG Software
Shai Shalev-Shwartz	49	Chief Technology Officer
Nimrod Nehushtan	35	Executive Vice President Business Development & Strategy, Co-Manager REM

Amnon Shashua is our co-founder and has been serving as our Chief Executive Officer and President since 2017 and as our director since our founding in 1999. He served as a Senior Vice President at Intel from 2017 to 2022, following our acquisition by Intel. Professor Shashua founded Mobileye in 1999. In addition to Mobileye, Professor Shashua has founded a number of startups in the fields of computer vision and machine learning, including CogniTens, which develops comprehensive dimensional measurement systems, which he founded in 1995 and has since been acquired, OrCam, which harnesses computer vision and AI to assist the visually and hearing impaired, which he co-founded in 2010 and serves as its Co-Chairman, and AI21 Labs, which works to use AI to understand and create natural language, which he co-founded in 2017 and serves as its Chairman. In 2019, Professor Shashua founded One Zero Digital Bank, a digital bank in Israel. In December 2021, Professor Shashua co-founded Mentee Robotics, which aims to build humanoid robots and has since been serving as its Chairman. Professor Shashua holds the Sachs Chair in Computer Science at the Hebrew University of Jerusalem, where he teaches and supervises graduate students. He has published 162 papers in the field of machine learning and computational vision and holds over 94 patents. Professor Shashua has been awarded prestigious prizes for his contributions to science and technology and is also the 2020 Dan David laureate in the field of AI awarded for his ground-breaking work in the field. In 2019, he was recognized as the Electronic Imaging Scientist of the Year by the Society for Imaging Science and Technology. Professor Shashua and his team were also finalists in the European Inventor Awards of 2019, awarded by the European Patent Office. In July 2022, Professor Shashua received the Mobility Innovator Award from the Automotive Hall of Fame. In March 2023, Professor Shashua received the Israel Prize for Lifetime Achievement from the Israel Ministry of Education.

Moran Shemesh Rojansky has been serving as our Chief Financial Officer since 2023. Prior to her current position, Ms. Shemesh Rojansky joined Mobileye in 2016 as our Corporate Controller and subsequently became our Director of Finance, Vice President of Finance and Acting Chief Financial Officer. Prior to joining Mobileye, Ms. Shemesh Rojansky served in financial reporting roles at Tnuva Ltd, including head of consolidation and reporting, for three years from 2013 to 2016. Prior to that, Ms. Shemesh Rojansky served in several roles in the accounting consulting services and advisory group at PricewaterhouseCoopers Israel, including senior manager. Ms. Shemesh Rojansky earned both her M.B.A. in financial management and her B.A. in accounting and law from Tel Aviv University in Israel and is a licensed certified public accountant.

Boaz Ouriel has been serving as our Executive Vice President, EPG Software since 2023. From December 2017 to April 2022, following our acquisition by Intel, Mr. Ouriel was an Intel employee assigned to work for Mobileye. Mr. Ouriel joined Mobileye as an employee in April 2022 as Senior Director Software Development Manager. Mr. Ouriel has over 20 years' experience at Intel and Mobileye leading the development of middleware and low-level software, with a focus on performance optimization and a specialty in building robust compilers and unique compute-oriented programmable accelerators. Mr. Ouriel received a BSc in applied mathematics and computer science from the Technion, where he graduated with honors, and an executive MBA from the Recanati Graduate School of Business Administration. He is an OpenCL veteran, contributing to the definition of the OpenCL standard, is the former editor of the SPIR-V 1.0 specification, and the recipient of numerous patents and awards in his field.

Shai Shalev-Shwartz has been serving as our Chief Technology Officer since 2018. From 2017 to 2022, following our acquisition by Intel, Professor Shalev-Shwartz served as a Senior Fellow of Intel. Professor Shalev-Shwartz is well known for his research in machine learning and was listed as one of the 100 most influential researchers worldwide in 2016 by AMiner. Professor Shalev-Shwartz is also a professor at the Rachel and Selim Benin School of Computer Science and Engineering at the Hebrew University of Jerusalem. In 2014, he co-authored a book used by major universities on theoretical machine learning: "Understanding Machine Learning From Theory to Algorithms." Before joining Hebrew University and Mobileye, Mr. Shalev-Shwartz was a research assistant professor at Toyota Technological Institute in Chicago, and also worked in research at both Google (Nasdaq: GOOG) and IBM (NYSE: IBM). Professor Shalev-Shwartz has written more than 100 research papers, focusing on machine learning, online prediction, optimization techniques and practical algorithms. In 2020, he was awarded the prestigious Michael Bruno Award for his research and his contribution to computer science and engineering. Mr. Shalev-Shwartz earned his Ph.D. from the Hebrew University of Jerusalem.

Nimrod Nehushtan has been serving as our Executive Vice President of Business Development & Strategy and Co-Manager of REM since 2023. Prior to his current position, Mr. Nehushtan served as Senior Vice President of Business Development & Strategy and Co-Manager of REM. Prior to that, Mr. Nehushtan served as Co-General Manager of the REM™ division of Mobileye, overseeing product development and leading business operations and growth. Mr. Nehushtan joined Mobileye in 2017 as a Project Manager. Prior to joining Mobileye, Mr. Nehushtan was an engineer at Israel Aerospace Industries. Mr. Nehushtan earned his B.Sc. in mechanical engineering from Tel Aviv University.

Item 1A. Risk Factors

Risk Factor Summary

Our business is subject to a number of risks and uncertainties that you should understand before making an investment decision. These include:

- If we are unable to develop and introduce new solutions and improve existing solutions in a cost-effective and timely manner, then our competitive position would be negatively impacted and our business, results of operations, and financial condition would be adversely affected.
- We invest significantly in research and development, and to the extent our research and development efforts are unsuccessful, our competitive position would be negatively impacted and our business, results of operations, and financial condition would be adversely affected.
- We operate in a highly competitive market.
- We have previously experienced constraints in the supply of our EyeQ™ SoCs as the result of the global semiconductor shortage during 2021 and 2022, and future shortages in the supply of our EyeQ™ SoCs or other critical parts would adversely affect our business, results of operations, and financial condition.
- We face additional supply chain risks and risks of interruption of requisite services, including, as a result of our reliance on a single supplier or limited suppliers and vendors, for certain components, equipment, and services.
- Increases in costs of the materials and other components that we use in our solutions would adversely affect our business, results of operations, and financial condition.
- Our business may suffer from claims, or incur losses, relating to, among other things, actual or alleged defects in our solutions, or if our solutions actually or allegedly fail to perform as expected, and publicity related to these claims could harm our reputation and decrease demand for our solutions or increase regulatory scrutiny of our solutions.
- We are subject to risks related to trade policies, sanctions, and import and export controls.
- We invest significant effort and money seeking OEM selection of our solutions, and there can be no assurance that these efforts will result in the selection of our solutions for use in production models. If we fail to achieve a design win after incurring substantial expenditures in these efforts, our future business, results of operations, and financial condition would be adversely affected.
- There is no guarantee that our customers will purchase our solutions in any certain quantity or at any certain price even after we achieve design wins, and there may be significant delays between the time we achieve a design win until we realize revenue from the vehicle model.
- We depend on a limited number of Tier 1 customers and OEMs for a substantial portion of our revenue, and the loss of, or a significant reduction in sales to, one or more of our major Tier 1 customers and/or the discontinued incorporation of our solutions by one or more major OEMs in their vehicle models would adversely affect our business, results of operations, and financial condition.
- We are highly dependent on the services of Professor Amnon Shashua, our President and Chief Executive Officer.
- If we are unable to attract, retain, and motivate key employees, then our business, results of operations, and financial condition would be adversely affected.
- We face integration risks and costs associated with companies, assets, employees, products, and technologies that we have or that we may acquire.

[Table of Contents](#)

- Interruptions to our information technology systems and networks and cybersecurity incidents could adversely affect our business, results of operations, and financial condition.
- Security breaches and other disruptions of our in-vehicle systems and related data could impact the safety of our end users and reduce confidence in us and our solutions.
- An uncertain economic environment and inflationary conditions may adversely affect global vehicle production and demand for our solutions.
- If OEMs are unable to maintain and increase consumer acceptance of ADAS and autonomous driving technology, our business, results of operations, and financial condition would be adversely affected.
- Our business, results of operations, and financial condition may be adversely affected by changes in automotive safety regulations or concerns that drive regulations that could increase our costs or delay or halt adoption of our solutions.
- The dual class structure of our common stock has the effect of concentrating voting control with Intel, and Intel will beneficially own shares of our Class B common stock, representing a majority of the shares of our common stock and approximately 98.6% of the voting power of our outstanding common stock as of December 28, 2024. This will limit or preclude your ability to influence corporate matters.
- We may have conflicts of interest with Intel, and because of (i) certain provisions in our amended and restated certificate of incorporation relating to related person transactions and corporate opportunities, (ii) agreements we entered into with Intel in connection with the Mobileye IPO, and (iii) Intel's controlling beneficial ownership interest in our company, we may not be able to resolve such conflicts on terms favorable to us.
- Conditions in Israel affect our operations and may limit our ability to produce and sell our solutions.
- Our operations may be disrupted by the obligations of personnel to perform military service as a result of current or future military actions involving Israel.

[Table of Contents](#)

In addition to the other information included in this Annual Report on Form 10-K and in our other filings with the SEC, the following risk factors should be considered in evaluating our business and future prospects. These risk factors represent what we believe to be the known material risk factors with respect to us and our business. Our business, operating results, cash flows and financial condition are subject to these risks and uncertainties, any of which could cause actual results to vary materially from recent results or from anticipated future results. Additional risks or uncertainties not currently known to us, or that we currently deem immaterial, may also have a material adverse effect on our business, financial condition, prospects, results of operations, or cash flows. We cannot assure you that any of the events discussed in the risk factors below will not occur.

Risks Related to Our Business

If we are unable to develop and introduce new solutions and improve existing solutions in a cost-effective and timely manner, then our competitive position would be negatively impacted and our business, results of operations, and financial condition would be adversely affected.

Our business, results of operations, and financial condition depend on our ability to complete development of our existing ADAS and autonomous driving programs and to develop and introduce new and enhanced solutions that incorporate and integrate the latest technological advancements in sensing and perception technologies, software and hardware, and camera, radar, lidar, mapping, and AI technologies to satisfy evolving customer, regulatory, and safety rating requirements. For example, we will need to complete the development and achieve cost efficient production at scale of new generations of our EyeQ™ SoCs and our software-defined imaging radar, and, in the case of AMaaS, source lidar cost effectively, all of which are important components of our planned approach to address the AMaaS and consumer AV markets. This report may contain descriptions of our current expectations regarding the years by which we expect to obtain engineering samples, commence production, or release our anticipated future solutions. These time periods are subject to significant uncertainty. We may encounter significant unexpected technical and production challenges, or delays in completing the development of these and other solutions and ramping production in a cost-efficient manner particularly as our products become increasingly complex. The development of these and other new and enhanced solutions requires us to invest resources in research and development and also requires that we:

- design innovative, accurate, and safety- and comfort-enhancing functions that differentiate our solutions from those of our competitors;
- continuously improve the reliability of, and reduce and ultimately remove the requirement for human intervention with, our autonomous driving technology;
- cooperate effectively on new designs and development with our customers, suppliers and partners;
- respond effectively to technological changes and product announcements by our competitors; and
- adjust to changing customer requirements, market conditions, and regulatory and rating standards quickly and cost-effectively.

If there are delays in, or if we fail to complete when expected or at all, our existing and new development programs, we may not be able to satisfy our customers' requirements, achieve additional design wins with existing or new customers, or achieve broader market acceptance of our solutions, and our business, results of operations, and financial condition would be adversely affected. In addition, the price of our solutions depends on the bundle included in the specific product. Our solutions have different margin profiles. As we develop, bundle, and sell full systems that include third-party hardware beyond EyeQ™, we expect that our gross margin will decrease on a percentage basis because of the greater third-party hardware content.

We invest significantly in research and development, and to the extent our research and development efforts are unsuccessful, our competitive position would be negatively impacted and our business, results of operations, and financial condition would be adversely affected.

To compete successfully, we must maintain successful research and development efforts, develop new solutions, and improve our existing solutions, all ahead of competitors. We are focusing our research and development efforts across several key emerging technologies, including computer vision, Compound AI and other AI technologies, software-defined imaging radar, the True Redundancy™ sensor fusion architecture, the REM™ mapping technology and our RSS model, and our Mobileye Surround ADAS™, Mobileye SuperVision™, Mobileye Chauffeur™ and Mobileye Drive™ systems. These are ambitious initiatives, and we cannot guarantee that all of these efforts will deliver the benefits we anticipate or be homologated as expected. We must make research and development investments based on our views of the most promising approaches to address future customer needs in rapidly evolving markets, and we cannot be certain that we will target out research and development investments appropriately, or correctly anticipate the manner in which these markets will evolve. To the extent our research and development efforts do not produce timely improvements in utility, accuracy, safety, cost and operational efficiency, our competitive position will be harmed. We do not expect all of our research and development investments to be successful. Some of our efforts to develop and market new solutions may fail, and the solutions we invest in and develop may be rejected by regulators or may not be well received by customers, who may adopt competing technologies. We make significant investments in research and development, and our investments at times may not contribute to our future operating results for several years, if at all, and such contributions at times may not meet our expectations or even cover the costs of such investments, which would adversely affect our business, results of operations, and financial condition.

We operate in a highly competitive market.

The ADAS and autonomous driving industries are highly competitive, and we expect they will become even more competitive in the future. Our future success will depend on, among other things, our ability to continue developing superior advanced technology to remain competitive with our existing and any new competitors. Competition is based on, among other things, cost efficiency, reliability, the ability to develop and deploy increasingly complex technologies that provide for vehicle, passenger, and pedestrian safety in compliance with existing and future regulations, the ability to gather or access large validation datasets in order to train the required software and to continuously harvest new data in real-time, the ability to cost-effectively deploy hardware, the ability to integrate technologies and hardware with overall vehicle design and production, adoption by OEMs, and the ability to develop and maintain strategic relationships with other participants in the automotive industry.

A significant and growing number of established and new technology companies and automobile manufacturers have entered, or are reported to have plans to enter, the market for ADAS and autonomous driving solutions. For example, certain of our competitors have announced that they are operating autonomous robotaxis. Some of our competitors have significantly greater or better-established resources than we do to devote to the design, development, manufacturing, distribution, promotion, sale, and support of their products. Automakers who seek to develop their own in-house solutions may also become indirect competitors. Some OEMs that have incorporated our solutions in the past have decided, and some OEMs that currently incorporate our solutions may decide to design in-house solutions to replace our solutions that they currently implement. For example, Tesla had previously incorporated our ADAS solutions in their vehicles but transitioned to their own in-house ADAS solutions in 2017. Further, in the third quarter of 2024, Zeekr announced their decision to utilize their in-house system instead of SuperVision™ for at least a major portion of production for their 001 model going forward. Mercedes-Benz is also employing its own in-house solutions, with others such as NIO, Volvo Cars, and Xpeng Motors also pursuing in-house solutions for portions of the ADAS software stack. In addition, our Tier 1 customers may be developing or may in the future develop competing solutions.

Tier 1 automotive supplier competitors include Bosch, Continental, and Denso. Our competitors in the silicon provider category include Ambarella, Advanced Micro Devices, Arriver / Qualcomm, Black Sesame Technologies, Horizon Robotics, Huawei, NVIDIA, NXP, Renesas Electronics, and Texas Instruments. Our competitors in the software-only category include StradVision, Autobrains and Wayve.

Additional competitors that could emerge include large technology companies that are resource rich and able to deploy such resources to compete, as well as companies that are able to develop products that may not require the massive datasets upon which our technologies currently rely while still achieving the same effectiveness of algorithms.

[Table of Contents](#)

In the autonomous driving market, including AMaaS and consumer AV, we face competition from technology companies, internal development teams from the automakers themselves, sometimes in combination with investments in early-stage autonomous vehicle technology companies, Tier 1 automotive suppliers, and robotaxi providers. AMaaS competitors include Cruise, Motional, Waymo, and Zoox in the United States and Europe and Auto X, Baidu, Deeproute.ai, Didi Chuxing, Momenta, and WeRide in China. Consumer AV competitors include Sony, and Tesla, who are developing self-driving vehicles for consumers.

Moovit competes against urban mobility applications and MaaS solutions, which provide transportation services and navigation data to consumers. Moovit's free and subscription-based application competition includes Alphabet, Apple, Citymapper and Transit. Moovit's application also competes with local urban and inter-city ticketing service providers that provide purchase and ticketing of public transit and mobility services on their own platform. See "Item 1. Business — Our Competition."

We have previously experienced constraints in the supply of our EyeQ™ SoCs as the result of the global semiconductor shortage during 2021 and 2022, and future shortages in the supply of our EyeQ™ SoCs or other critical parts would adversely affect our business, results of operations, and financial condition.

In 2021 and 2022, the semiconductor industry experienced widespread shortages of substrates and other components and available foundry manufacturing capacity. These factors, combined with the long lead times associated with wafer production, contributed to a shortage of semiconductors. During 2021 and 2022, STMicroelectronics, our sole supplier of EyeQ™ SoCs, was not able to meet our demand for EyeQ™ SoCs, causing a significant reduction in our inventory level, and we entered 2022 with significantly lower inventories of our EyeQ™ SoCs as a result of the limited supply during 2021. Starting in late 2022 and early 2023, such supply chain disruptions, raw material shortages and manufacturing limitations abated and during 2023, we successfully increased levels of EyeQ™ SoC inventory on hand, mitigating the potential for future supply constraints to cause a shortfall. However, in the event of a reoccurrence of supply chain constraints, and subject to the duration and severity thereof, we may be required to operate with minimal or no inventory of EyeQ™ SoCs or ECUs (including for Mobileye SuperVision™, Mobileye Chauffeur™, and Mobileye Drive™) on hand. As a result, we are substantially reliant on timely shipments of EyeQ™ SoCs from STMicroelectronics and ECUs from Quanta Computer (or other suppliers) to fulfill customer orders and if such a shortfall of chips or ECUs were to occur, we may be unable to offset future supply constraints through the use of inventory on hand. Since our EyeQ™ SoC is the core of our ADAS and autonomous driving solutions, continued, acute shortages in the supply of sufficient EyeQ™ SoCs to meet our production needs would impair our ability to meet our customers' requirements in a timely manner, and would affect our business, results of operations, and financial condition potentially in an adverse manner.

Moreover, the reoccurrence of global semiconductor shortages could constrain production and cause production delays by automakers, which could then result in reduced or delayed demand for our solutions. In addition, any event, including for example the COVID-19 pandemic from 2020 through 2022, causing, or leading to, port congestion, intermittent supplier shutdowns, and/or delays in the delivery of critical components, could result in additional expenses to expedite delivery of critical parts. Sustaining the proliferation of our solutions will require the readiness and solvency of our suppliers and vendors, a stable and motivated workforce, and ongoing government cooperation, including for travel and visa allowances, which many governments previously restricted in connection with efforts to address the COVID-19 pandemic. To mitigate supply chain constraints, we monitor inventory levels on an on-going basis and may further build up inventories of EyeQ™ SoCs. Accumulating such additional inventories could require substantial amounts of capital and may expose us to risks regarding the obsolescence of such chips.

We depend on STMicroelectronics to manufacture our EyeQ™ SoCs.

We currently purchase all of our EyeQ™ SoCs from STMicroelectronics. Because of the complex proprietary nature of our EyeQ™ SoCs, any transition from STMicroelectronics to a new supplier or, if there were a disaster at any of STMicroelectronics' facilities involved in manufacturing our EyeQ™ SoCs, bringing new facilities online, would take a significant period of time to complete and would likely result in our having insufficient inventory and adversely affect our business, results of operations, and financial condition. In addition, our contractual relationship with STMicroelectronics does not provide us with long-term pricing or quantity guarantees, and both we and STMicroelectronics are free to terminate the arrangement at any time. Further, we are vulnerable to the risk that STMicroelectronics may be unable to meet demand for our EyeQ™ SoCs or cease operations altogether. Moreover, certain critical manufacturing steps for EyeQ™ SoCs, including wafer fabrication and advanced packaging, are performed by a limited number of suppliers, including Taiwan Semiconductor Manufacturing Company Limited ("TSMC"). Any interruptions or delays in these manufacturing steps due to capacity constraints, equipment failures or geopolitical issues could significantly affect STMicroelectronics's ability to manufacture and deliver EyeQ™ SoCs on time, impacting our operations and customer relationships. STMicroelectronics depends on TSMC as its subcontractor to manufacture our EyeQ™ SoCs, particularly our EyeQ™5 and EyeQ™ 6 SoCs, and as a result, we are also vulnerable to the risk that TSMC may be unable to meet demand or cease operations altogether. In addition, we may be affected by supply constraints and increased costs involving STMicroelectronics and TSMC resulting from any reoccurrence of the global semiconductor shortage. See "— We have previously experienced constraints in the supply of our EyeQ™ SoCs as the result of the global semiconductor shortage during 2021 and 2022, and future shortages in the supply of our EyeQ™ SoCs or other critical parts would adversely affect our business, results of operations, and financial condition."

TSMC is located in Taiwan, and our ability to receive sufficient supplies of our EyeQ™ SoCs could be adversely affected by events in Taiwan, China and the broader region, such as natural disasters in Taiwan, including earthquakes, drought and typhoons, escalations of tensions between the People's Republic of China and Taiwan, including resulting from the People's Republic of China's step up of military exercises around Taiwan, political unrest, trade restrictions, war, or other geopolitical issues. These same factors may also adversely affect the global supply of microchips and cause additional constraints on global automotive production.

We face additional supply chain risks and risks of interruption of requisite services, including, as a result of our reliance on a single supplier or limited suppliers and vendors, for certain components, equipment, and services.

A large number of direct and indirect suppliers and vendors provide materials, equipment, and services that are used in the production of our solutions and other aspects of our business. Where possible, we seek to have several sources of supply, and to ensure our suppliers and vendors have multiple sources of supply as well. However, for certain materials, equipment, and services, we, and/or our suppliers and vendors, rely on a single or a limited number of direct and indirect suppliers and vendors, or upon direct and indirect suppliers and vendors in a single location, for example STMicroelectronics and TSMC. In addition, direct and indirect supplier and vendor consolidation, financial health or business failures can impact the nature, quality, availability, and pricing of the products and services available to us. For example, we currently depend on Amazon Web Services for cloud services in connection with our REM™ mapping system, Roadbook™, and AMaaS solutions including the Moovit platform, and a failure of such cloud services would result in interruptions to our services. In addition, the semiconductor industry has previously experienced widespread shortages of substrates. See "— We have previously experienced constraints in the supply of our EyeQ™ SoCs as the result of the global semiconductor shortage during 2021 and 2022, and future shortages in the supply of our EyeQ™ SoCs or other critical parts would adversely affect our business, results of operations, and financial condition" and "— We depend on STMicroelectronics to manufacture our EyeQ™ SoCs."

Finding and qualifying alternate or additional suppliers and vendors is often a lengthy process and can lead to production delays, interruptions to our services, or additional costs, and such alternatives are sometimes not available at all. The inability of suppliers or vendors to deliver necessary production materials, equipment, or services can disrupt the production processes of our solutions and make it more difficult for us to implement our business strategy. Suppliers and vendors periodically extend lead times, face capacity constraints, limit supplies, increase prices, experience quality issues, face equipment failures, experience financial instability or encounter cybersecurity or other issues that can interrupt or increase the cost of our supply and services. Production of our solutions can be disrupted by the unavailability of resources, such as water, silicon, electricity, gases, and other materials. The unavailability or reduced availability of materials or resources would require us to reduce production or incur additional costs, which would harm our business and results of operations.

We also rely on third-party providers to manufacture, assemble, and test certain components and products. From time to time, these third parties are unable to perform these services on a timely or cost-effective basis, in sufficient volumes, or at all. In some cases, there are limited or no readily available satisfactory alternate providers. In any of these circumstances, we can encounter supply delays or disruptions or incur additional costs that could prevent us from meeting customer demand and/or adversely affect our business and financial results. We typically have less control over delivery schedules, design and manufacturing co-optimization, manufacturing yields, quality, product quantities, and costs for components and products that are manufactured or supplied by third parties. Delays or quality issues with one component could limit our ability to manufacture the entire completed product.

Moreover, increased regulation or stakeholder expectations regarding responsible sourcing practices could cause our compliance costs to increase, or result in publicity that negatively affects our reputation. Moreover, given that we use several materials and services and rely on several suppliers and vendors, but do not directly control the procurement or employment practices of such suppliers and vendors, we could be subject to financial or reputational risks as a result of our suppliers' and vendors' conduct. To the extent we are unable to manage these risks, our ability to timely supply competitive solutions will be harmed, our costs will increase, and our business, results of operations, and financial condition would be adversely affected.

Increases in costs of the materials and other components that we use in our solutions would adversely affect our business, results of operations, and financial condition.

Significant changes in the markets in which we purchase materials, components, and supplies for the production of our solutions may adversely affect our profitability. Our contractual relationship with STMicroelectronics, our sole supplier of EyeQ™ SoCs, and with other suppliers does not provide us with long-term pricing or quantity guarantees. As a result of the global semiconductor shortage in 2021 and 2022 as well as inflationary pressures, we have experienced and may experience in the future increases in the cost of our EyeQ™ SoCs. We have adjusted, and continue to seek to adjust, the prices charged to our customers to offset these cost increases, but anticipate that, despite such price increases, our percentage gross margin may decrease, at least in the short term, as a result of these cost increases. Competitive and market pressures limit our ability to recover increases in costs through increases in prices we charge to our customers, and, even where we are able to achieve price increases that would offset such increased costs, in some cases there may be a delay before we are able to do so. The inability to pass on price increases to our customers when raw material or component prices increase rapidly or are significantly higher than historic levels would adversely affect our business, results of operations, and financial condition.

In addition, the prices of our solutions depend on the bundle of applications that are included in the specific product, and our prices vary significantly across our solutions. Our solutions have different margin profiles, which vary between solutions depending on the amount, number, and type of components that we deliver. If we fail to maintain our solutions mix or maintain our gross margin and operating margin, our business, results of operations, and financial condition would be adversely affected.

Our business may suffer from claims or incur losses relating to, among other things, actual or alleged defects in our solutions, or if our solutions actually or allegedly fail to perform as expected, and publicity related to these claims could harm our reputation and decrease demand for our solutions or increase regulatory scrutiny of our solutions.

Our software and hardware, including our EyeQ™ SoCs and AI technologies, are complex and, from time to time, have had, and could have or could be alleged to have, defects in design or manufacturing, inadequate, inaccurate, biased or otherwise flawed data or algorithms used to train certain AI technologies, security vulnerabilities or other errors, failures, or other issues of not functioning in accordance with their specifications or as expected. Some errors or defects in our solutions have been, and could be, initially undetected and only discovered after they have been tested, commercialized, and deployed by customers. Alleged or actual defects in any of our solutions could result in adverse publicity for us, warranty claims, litigation against us, legal expenses and damages, our customers never being able to commercialize technology incorporating our solutions, negative publicity for our customers, and other consequences. Errors, defects, or security vulnerabilities could result in serious injury to or death of the end users of vehicles incorporating our solutions, or those in the surrounding area, including as a result of traffic accidents and collisions. If that is the case, we would incur significant additional development costs and product recall, repair, or replacement costs.

If any of our solutions are or are alleged to be defective, we may be required to participate in a recall involving such solutions. Each vehicle manufacturer has its own practices regarding product recalls and other product liability actions relating to its suppliers. However, as suppliers become more integrally involved in the vehicle design process, OEMs may look to their direct and indirect suppliers for contribution when faced with recalls and product liability claims. OEMs also require their suppliers to guarantee or warrant their products and bear the costs of repair and replacement of such products under new vehicle warranties.

Depending on the terms under which we supply products to a Tier 1 customer or an OEM, vehicle manufacturers have held and may attempt to hold us responsible for some or all of the repair or replacement costs of defective products under new vehicle warranties when the OEM asserts that the solution supplied did not perform as warranted. Our potential liability may increase to the extent that OEMs increasingly purchase our products directly, as opposed to incorporating our solutions through indirect purchases from our Tier 1 customers. Although we regularly evaluate the level of our reserves for warranty claims and adjust them when appropriate, final amounts determined to be due in respect of warranty claims could differ materially from our recorded estimates. Product liability, warranty, and recall costs would have an adverse effect on our business, results of operations, and financial condition. In addition, product liability claims present the risk of protracted litigation, legal fees, and diversion of management's attention from the operation of our business, even if our defense of these claims is ultimately successful.

While STMicroelectronics is responsible for quality control and procedures for testing and manufacturing our EyeQ™ SoCs to our specifications, we retain liability for failure in production caused by defective EyeQ™ SoC design or error. Further, although we use disclaimers, limitations of liability, and similar provisions in our agreements, there is no assurance that any or all of these provisions will prove to be effective barriers to product liability claims with respect to our products.

In addition, although we currently maintain casualty insurance, there is no assurance that such insurance will be adequate to cover any or all of our potential losses, including due to large deductibles and broad exclusions. Our insurers may also discontinue our insurance coverage or be unable or unwilling to pay a claim, and we may be unable to find replacement insurance on acceptable terms, or at all. In respect of the commercialization of our solutions, including Mobileye SuperVision™, Mobileye Chauffeur™ and Mobileye Drive™, adequate insurance coverage may be partially or entirely unavailable to cover the associated risks, for which specialized insurance may be required. Losses not covered by insurance may be large, which could harm our results of operations and financial condition.

Furthermore, the automotive industry in general is subject to significant litigation claims due to the potentially severe consequences of traffic collisions or other accidents. As a provider of solutions related to, among other things, preventing traffic collisions and other accidents, we could be subject to litigation for traffic collisions or other accidents, even if our solutions or their features or the failure thereof did not cause any particular traffic collision or accident. Our technology has been involved, and we expect in the future will be involved, in accidents resulting in death or personal injury, and such accidents where our solutions or their features are involved may be the subject of significant public attention. There also remains significant uncertainty in the legal implications to providers of emerging ADAS and autonomous driving technologies of traffic collisions or other accidents involving such technologies, particularly given variations in legal and regulatory regimes that are emerging in different jurisdictions, and we may become liable for losses that exceed the current industry norms as the regulatory and legal landscape develops. In addition, because ADAS and autonomous driving technologies rely on products and services provided by third parties, there is the potential that the failure of such third-party products or services that affect the performance of EyeQ™ SoCs, notwithstanding the absence of any defect in design or manufacture or other failure in EyeQ™ SoCs themselves, could result in additional claims being made against us.

Publicity regarding claims involving our solutions can also have an adverse effect on our reputation and the reputation for ADAS and autonomous driving solutions, which could decrease consumer demand for vehicles incorporating these technologies. Further, enhanced publicity surrounding such claims may also increase the regulatory scrutiny of our platforms, which could have a material adverse effect on our ability to complete our business plans.

We invest significant effort and money seeking OEM selection of our solutions, and there can be no assurance that these efforts will result in the selection of our solutions for use in production models. If we fail to achieve a design win after incurring substantial expenditures in these efforts, our future business, results of operations, and financial condition would be adversely affected.

We invest significant effort and money from the time of our initial contact with an OEM to the time when the OEM chooses our technology for ADAS or autonomous driving applications to be incorporated into one or more specific vehicle models to be produced by the OEM. This selection process is known as a “design win.” We could expend significant resources pursuing, but fail to achieve, a design win. After a design win, it is typically difficult for a product or technology that did not receive the design win to displace the winner until the OEM issues a new request for quotation because an OEM will generally not change complex technology already integrated in its systems until a vehicle model is revamped. In addition, the firm with the winning design may have an advantage with the OEM going forward because of the established relationship between the winning firm and the OEM, which would make it more difficult for that firm’s competitors to win the designs for other production models. If we fail to win a significant number of OEM design competitions in the future, then our business, results of operations, and financial condition would be adversely affected. We typically sell our products to Tier 1 suppliers, but increasingly engage directly with OEMs, particularly with respect to our advanced product portfolio, which adds complexity to the sourcing and contracting process for us, and could strain our resources.

There is no guarantee that our customers will purchase our solutions in any certain quantity or at any certain price even after we achieve design wins, and there may be significant delays between the time we achieve a design win until we realize revenue from the vehicle model.

We generally do not have contracts with customers that require them to purchase our solutions in any certain quantity or at any certain price, and our sales could be less than we forecast if a vehicle model for which we achieved a design win is unsuccessful, including for reasons unrelated to our solutions, if an OEM decides to discontinue or reduce production of a vehicle model or of the use of our solutions in a vehicle model, or if we face downward pricing pressure. As a result, achieving design wins is not a guarantee of revenue, and our sales may not correlate with the achievement of additional design wins. For example, in the third quarter of 2024, Zeekr announced their decision to utilize their in-house system instead of SuperVision™ for at least a major portion of production for their 001 model going forward. Moreover, pricing estimates are made at the time of a request for quotation by an OEM, so that worsening market or other conditions between the time of a request for quotation and an order for our solutions may require us to sell our solutions for a lower price than we initially expected. Due to the global material shortage in 2021 and 2022, we worked with our customers to ensure they commit to certain volumes on an annual basis in order to secure quantities. In late 2023, we returned to our pre-global material shortage practice of having customers commit to certain volumes on a quarterly or shorter basis. However, we have not committed to supply such volumes and the volumes we supply will depend upon market conditions. We may also face pricing pressures from our customers as a result of their restructuring, consolidation, and cost-cutting initiatives or as a result of increased competition. As a particular solution matures and unit volumes increase, we also generally expect its average selling price (“ASP”) to decline. In addition, there are generally step-downs in pricing over periods of production as volumes ramp up. If we are unable to generate sufficient production cost savings or introduce solutions with additional features and functionality at higher price points to offset price reductions, then our business, results of operations, and financial condition would be adversely affected.

Furthermore, our solutions are technologically complex, incorporate many technological innovations, and are typically subject to significant safety testing, and OEMs generally must make significant commitments of resources to test and validate our solutions before including them in any particular vehicle model. The integration cycles of our solutions with new OEMs are approximately one to three years after a design win, depending on the OEM and the complexity of the solution. These integration cycles result in our investment of resources prior to realizing any revenue from a vehicle model. An OEM may choose to cancel production of the vehicle model for which we achieved the design win or cancel or postpone the vehicle model. Our ADAS and autonomous driving solutions control various vehicle functions including engine, transmission, safety, steering, navigation, acceleration, and braking and therefore must be integrated effectively with the other systems of the vehicle developed by the OEM, our Tier 1 customers, and other suppliers, and we may be unable to achieve the requisite level of interoperability in a vehicle model for our solutions to be implemented even after a design win.

In connection with our design wins, we typically receive preliminary estimates from OEMs of their anticipated production volumes for the models relating to those design wins. Those estimates may be revised significantly by the OEMs, potentially multiple times, and may not be representative of future production volumes associated with those design wins, which could be significantly higher or lower than estimated. For example, several automakers decreased their initial 2023 vehicle production projections, and we had to adjust our forecasts accordingly. Furthermore, long development cycles or vehicle model cancellations or postponements would adversely affect our business, results of operations, and financial condition. In addition, in prior periods, including during the global semi-conductor shortage in 2021 and 2022, certain Tier 1 customers increased their orders for components and parts, including our solutions, to counteract the impact of supply chain shortages for auto parts, and we expect following the abatement of such shortages, these Tier 1 customers in turn will utilize such accrued inventory on hand before placing new orders to meet the demand of OEMs in current or future periods. As a result, some demand for our solutions and the corresponding revenue from these customers were shifted to earlier time periods than otherwise would have occurred absent a general supply chain shortage and inflationary environment during prior periods. For example, as a result of our standard planning process for 2024, we became aware in late 2023 that our Tier 1 customers accrued significant excess inventory during 2021 and 2022 in a desire to avoid parts shortages, and in 2023 as a result of lower-than-expected production at certain OEMs. We estimate that our customers used the vast majority of this excess, accrued inventory in 2024 in accordance with our expectations, but there is no guarantee that orders will remain normalized or that our customers won't build up excess inventory in the future.

We depend on a limited number of Tier 1 customers and OEMs for a substantial portion of our revenue, and the loss of, or a significant reduction in sales to, one or more of our major Tier 1 customers and/or the discontinued incorporation of our solutions by one or more major OEMs in their vehicle models would adversely affect our business, results of operations, and financial condition.

We supply OEMs with the EyeQ™ platform directly or through our arrangements with automotive system integrators, known as Tier 1 automotive suppliers, which are direct suppliers to OEMs. In 2024, our three largest Tier 1 customers, which were ZF, Valeo, and Aptiv, accounted for 27%, 20%, and 14%, respectively, of our revenue, compared to 30%, 24%, and 14%, respectively, in 2023. Moreover, in 2024, 15%, 15%, 11%, and 9% of our revenue was derived from the incorporation of our solutions into the vehicle models of four OEMs and a total of 78% of our revenue was derived from the incorporation of our solutions into the vehicle models of eight OEMs (including those four) through our Tier 1 customers. We have not executed written agreements with these Tier 1 customers but rather provide our solutions to such customers pursuant to standard purchase orders under our general terms and conditions, pursuant to which they are generally not obligated to purchase our solutions in any certain quantity or at any certain price. See “— There is no guarantee that our customers will purchase our solutions in any certain quantity or at any certain price even after we achieve design wins, and there may be significant delays between the time we achieve a design win until we realize revenue from the vehicle model.” Notwithstanding the foregoing, as a result of global shortages, some of our customers, including our top three Tier 1 customers, committed to purchasing minimum quantities of certain solutions in 2023. However, with the abatement of global shortages, our customers have generally reverted to our customary practice of committing to purchase quantities of our solutions on a quarterly or shorter basis.

We believe our business, results of operations, and financial condition for the foreseeable future will likely continue to depend on sales to a relatively small number of Tier 1 customers and the incorporation of our solutions by a relatively small number of OEMs in their vehicle models. In the future, our current Tier 1 customers may decide not to purchase our solutions, may purchase fewer of our solutions than they did in the past, or may alter their purchasing patterns, and OEMs may discontinue incorporation of our solutions in their vehicle models, including as a result of a transition to in-house solutions or solutions provided by our competitors, or their individual or aggregate production levels may decline due to a number of factors, including supply chain challenges and macroeconomic conditions. Further, the amount of revenue attributable to any single Tier 1 customer, or our Tier 1 customer concentration generally, may fluctuate in any given period. Our customers and the OEMs that incorporate our solutions may not perform as well as the automotive market as a whole, which in turn could impact our business, results of operations, and financial condition relative to the industry. The loss of one or more key Tier 1 customers, a reduction in sales to any key Tier 1 customer, the discontinued or decreased incorporation of our solutions by a key OEM, or our inability to attract new significant Tier 1 customers and OEMs would negatively impact our revenue and adversely affect our business, results of operations, and financial condition.

The success of our AMaaS solutions will depend on their effective deployment and operation by third parties.

The success of our AMaaS directed solutions will depend on our customers and partners, such as transportation network companies, effectively deploying and operating our solution in the future, and their failure to do so may result from factors outside our control. We are collaborating with various business-to-business and business-to-consumer channels for the purpose of deploying Mobileye Drive™. As part of our business-to-business go-to-market strategy, we expect to sell and integrate Mobileye Drive™ to a range of shuttle network operators and vehicle OEMs that intend to operate consumer-facing AMaaS, transportation on demand, and delivery services. Additionally, as part of our business-to-customer go-to-market strategy, we expect to deploy Mobileye Drive™-enabled AMaaS offerings by integrating them with our self-driving vehicles in partnership with transportation network companies. Such third parties may also terminate our partnerships with them. Any failures by third parties to effectively deploy and operate our AMaaS solutions, or the termination of our relationships with any such third parties, would adversely affect our business, results of operations, and financial condition.

Developing RoadBook™ depends on continued cooperation by OEMs.

The success of our Cloud-Enhanced ADAS™, Mobileye Surround ADAS™, Mobileye SuperVision™, Mobileye Chauffeur™ and Mobileye Drive™ systems requires significant amounts of fresh mapping data from series production vehicles around the world in order to develop RoadBook™. We currently have agreements in place that provide OEMs with economic benefits or technological advantages to provide us with data arriving from OEM series production vehicles, but there is no guarantee that we can keep such agreements in place or that OEMs will continue to cooperate with us. If we are not able to obtain mapping data for RoadBook™, our Cloud-Enhanced ADAS™, Mobileye Surround ADAS™, Mobileye SuperVision™, Mobileye Chauffeur™ and Mobileye Drive™ systems will not perform as expected, which would adversely affect our business, results of operations, and financial condition.

We are highly dependent on the services of Professor Amnon Shashua, our President and Chief Executive Officer.

We are highly dependent on Professor Shashua, our President and Chief Executive Officer. While Professor Shashua is highly active in our management and allocates a significant amount of time to our company, he does not devote his full time and attention to our company. For example, Professor Shashua is also the Chairman and co-founder of AI21 Labs, which works to use AI to understand and create natural language, the Co-Chairman and co-founder of OrCam, which harnesses computer vision and AI to assist the visually and hearing impaired, the Founder of One Zero Digital Bank, an entirely digital independent bank being developed in Israel, the Chairman and co-founder of Mentee Robotics, which aims to build humanoid robots, and the Sachs Chair in Computer Science at the Hebrew University of Jerusalem, where he teaches and supervises graduate students. Professor Shashua may also become involved in additional ventures from time to time. The loss of Professor Shashua, or a significant diminution in his contribution to us, would adversely affect our business, results of operations, and financial condition.

If we are unable to attract, retain, and motivate key employees, then our business, results of operations, and financial condition would be adversely affected.

Hiring and retaining qualified executives, developers, engineers, technical staff, and sales representatives are critical to our business. The competition for highly skilled employees in our industry is increasingly intense. Competitors for technical talent increasingly seek to hire our employees. Changes in the interpretation and application of employment-related laws to our workforce practices may also result in increased operating costs and less flexibility in how we meet our changing workforce needs. To help attract, retain, and motivate qualified employees, we intend to use employee incentives such as share-based awards. Our employee hiring and retention also depend on our ability to build and maintain a diverse and inclusive workplace culture and be viewed as an employer of choice. If our share-based or other compensation programs and workplace culture cease to be viewed as competitive, our ability to attract, retain, and motivate employees would be weakened, which would harm our results of operations. Equity compensation has been, and will continue to be, an important part of our future compensation strategy and a significant component of our future expenses, which we expect to increase over time. Moreover, sustained declines in our stock price can reduce the retention value of our share-based awards. If we do not effectively hire, onboard, retain, and motivate key employees, then our business, results of operations, and financial condition would be adversely affected.

[Table of Contents](#)

Changes in our management team can also disrupt our business. Our management and senior leadership team has significant industry experience, and their knowledge and relationships would be difficult to replace. Leadership changes may occur from time to time, and we cannot predict whether significant resignations will occur or whether we will be able to recruit qualified personnel. In addition, the relationships and reputation that members of our management and key leadership have established and maintain with our Tier 1 customers and OEMs contribute to our ability to maintain strong relationships with key partners and to identify new business opportunities.

We face integration risks and costs associated with companies, assets, employees, products, and technologies that we have or that we may acquire.

We have in the past and, if we are presented with appropriate opportunities, we may in the future acquire or make investments in complementary companies, assets, employees, products, and technologies. We face risks, uncertainties, and disruptions associated with the integration process of any such acquisitions or investments, including difficulties in the integration of the operations of an acquired company, integration of acquired technology with our solutions, diversion of our management's attention from other business concerns, the potential loss of key employees or customers of the acquired business, and our inability to achieve the strategic goals of such acquisitions and investments. Any failure to successfully integrate other companies, assets, employees, products, or technologies that we have or may acquire will adversely affect our business, results of operations, and financial condition. Furthermore, we may have to incur debt or issue equity securities to pay for any future acquisitions or investments, the issuance of which could be dilutive to our existing stockholder.

We may need to raise additional capital in the future, which may not be available on terms acceptable to us, or at all.

A majority of our operating expenses are for research and development activities. Our capital requirements will depend on many factors, including, but not limited to:

- technological advancements;
- market acceptance of our solutions and solution enhancements, and the overall level of sales of our solutions;
- research and development expenses;
- our relationships with our customers and suppliers;
- our ability to control costs;
- sales and marketing expenses;
- enhancements to our infrastructure and systems and any capital improvements to our facilities;
- potential acquisitions of businesses and product lines; and
- general economic conditions, including any remaining effects from the COVID-19 pandemic, inflation, rising interest rates, and international conflicts and their impact on the automotive industry in particular.

If our capital requirements are materially different from those currently planned, we may need additional capital sooner than anticipated. If additional funds are raised through the issuance of equity or convertible debt securities, our stockholders may be diluted. Additional financing may not be available on favorable terms, on a timely basis, or at all. If adequate funds are not available or are not available on acceptable terms, we may be unable to continue our operations as planned, develop or enhance our solutions, expand our sales and marketing programs, take advantage of future opportunities, or respond to competitive pressures.

We are affected by fluctuations in currency exchange rates, including those in connection with recent inflationary trends in the United States.

We are exposed to adverse as well as beneficial movements in currency exchange rates. Our functional currency is the U.S. dollar, and we incur financial expenses in connection with fluctuations in value due to foreign exchange differences between our monetary assets and liabilities denominated in New Israeli Shekels and, to a much lesser extent, the Euro, the Chinese Yuan and the Japanese Yen. Although most of our sales occur in U.S. dollars, and our financial results are reported in U.S. dollars, the payroll and other operating expenses that are denominated in New Israeli Shekels are well above half of these expenses. An increase in the value of the dollar will increase the real cost to our customers of our solutions in those markets outside the U.S. where we sell in dollars, and a weakened dollar will increase the cost of expenses such as payroll, utilities, tax, marketing expenses, and capital expenditures. In 2024, the Company initiated a foreign currency cash flow hedging program, designed to hedge the Company's foreign exchange rate risk resulting from its ILS payroll expenses, but there is no guarantee that volatility in exchange rates will not adversely affect our business, results of operations and financial condition.

Our historical financial information may not be representative of our results as an independent public company.

The historical financial information included in this Annual Report on Form 10-K may not necessarily reflect our results of operations, financial position, and cash flows in the future or what they would have been had we been a separate, stand-alone company during the years presented. Our historical financial data presented in this report includes costs of our business, which may not, however, reflect the expenses we would have incurred as a stand-alone company for the years presented. Actual costs that may have been incurred if we had operated as a stand-alone company would depend on a number of factors, including the chosen organizational structure, the outsourcing of certain functions, and other strategic decisions. See "Item 7. Management's Discussion and Analysis of Financial Condition and Results of Operations" and our historical financial statements and the accompanying notes included elsewhere in this report.

We are a holding company.

We are a holding company. Accordingly, our ability to conduct our operations, service any debt that we may incur, and pay dividends, if any, is dependent upon the earnings from the business conducted by our subsidiaries. The distribution of those earnings or advances or other distributions of funds by our subsidiaries to us, as well as our receipt of such funds, are contingent upon the earnings of our subsidiaries and are subject to various business considerations and applicable law, including the laws of Israel. If our subsidiaries are unable to make sufficient distributions or advances to us, or if there are limitations on our ability to receive such distributions or advances, we may not have the cash resources necessary to conduct our corporate operations, which could adversely affect our business, results of operations, and financial condition.

Risks Related to Privacy, Data, and Cybersecurity

Interruptions to our information technology systems and networks and cybersecurity incidents could adversely affect our business, results of operations, and financial condition.

We collect and maintain information in digital form that is necessary to conduct our business, and we rely on information technology systems and networks ("IT systems") to process, transmit, and store electronic information, and to manage or support our business and consumer facing activities. Our operations routinely involve receiving, storing, processing, and transmitting confidential or sensitive information pertaining to our business, customers, suppliers, employees, and other sensitive matters, including trade secrets, other proprietary business information, and personal information. Although we have established physical, logical, electronic, and organizational measures designed to safeguard and secure our systems to prevent a data breach or compromise, and to prevent damage to or downtime of our systems, and although we rely on commercially available systems, software, tools, and monitoring to provide security for our IT systems and the processing, transmission, and storage of digital information, we cannot guarantee that such measures will be adequate to detect, prevent, or mitigate cyber incidents. The implementation, maintenance, segregation, and improvement of these measures requires significant management time, support, and cost. Moreover, there are inherent risks associated with developing, improving, expanding, and updating current systems, including the disruption of our data management, procurement, production execution, finance, supply chain, and sales and service processes. These risks may affect our ability to manage our data and inventory, procure parts or supplies, or produce, sell, deliver, and service our solutions, adequately protect our intellectual property, or achieve and maintain compliance with, or realize available benefits under, applicable laws, regulations, and contracts.

[Table of Contents](#)

We cannot be sure that the IT systems upon which we rely, including those of our third-party vendors or suppliers, will be effectively implemented, maintained, or expanded as planned. While cyberattacks against our third-party vendors or suppliers have not materially adversely affected us to date, future cyberattacks on such third parties may cause significant disruptions and materially adversely affect our business, results of operations, and financial condition. Additionally, any contractual protections with such third parties, including our right to indemnification, if any at all, may be limited or insufficient to prevent a negative impact on our business from such cyberattacks. Despite the implementation of preventative and detective security controls, our and such third parties' IT systems are vulnerable to damage, shutdown, or interruption from a variety of sources, including telecommunications or network failures or interruptions, system malfunction, natural disasters, cyber-crime, terrorism, and war. Additionally, our IT systems and products may be vulnerable to malicious acts by hackers, including through use of computer viruses, malware (including ransomware), phishing attacks, or denial of service attacks.

We regularly face attempts by others to gain unauthorized access, or to introduce malicious software, to our IT systems. Individuals or organizations, including malicious hackers, state-sponsored organizations, insider threats, including employees and third-party service providers, or intruders into our physical facilities, at times may attempt to gain unauthorized access to or corrupt our IT systems, products, or services. Due to the widespread use of our solutions, we are a target for computer hackers and organizations that intend to sabotage, take control of, or otherwise corrupt our processes, solutions, and services. We are also a target for malicious attackers who attempt to gain access to our network or data centers or those of our suppliers, customers, partners, or end users, steal proprietary information related to our business, products, employees, suppliers, and customers, interrupt our infrastructure, systems, and services or those of our suppliers, customers, or others, or demand ransom to return control of such systems and services. Such attempts are increasing in number and in technical sophistication, may see enhanced effectiveness through the use of AI, and if successful, may expose us and the affected parties to risk of loss or misuse of confidential or other proprietary or commercially sensitive information, compromise personal information regarding users or employees, disrupt our business operations, and jeopardize the security of our facilities. Our IT infrastructure also includes products and services provided by third parties, and these providers may experience breaches of their systems and products that impact the security of our systems and our proprietary or confidential information.

We have experienced data breaches, cyberattacks, attempts to breach our systems, and other similar incidents, none of which have resulted in a material adverse impact to our business or operations, but there can be no guarantee we will not experience an incident that would have such an impact. Such incidents, whether or not successful, could result in our incurring significant costs related to, for example, rebuilding internal systems, writing down inventory value, implementing additional threat protection measures, providing modifications to our solutions, defending against litigation, responding to regulatory inquiries or actions, paying damages, providing customers with incentives to maintain the business relationship, or taking other remedial steps with respect to third parties, as well as reputational harm. In addition, cybersecurity threats are constantly evolving, including through the use of AI, thereby increasing the difficulty of successfully defending against them or implementing adequate preventative measures. As a result of and following the COVID-19 pandemic, remote work and remote access to our network and systems have increased significantly, which also increases our cybersecurity attack surface. There has also been an increase in cyberattack volume, frequency, and sophistication driven by the global enablement of remote workforces. We seek to detect and investigate unauthorized attempts and attacks against our network and solutions and to prevent their recurrence where practicable through changes to our internal processes and tools and changes or updates to our solutions. However, despite the implementation of preventative and detective security controls, we, and the third parties upon which we rely, remain potentially vulnerable to additional known or unknown cybersecurity threats. In some instances, we, our suppliers, our customers, and end users, can be unaware of an incident or its magnitude and effects. Even when a security breach is detected, the full extent of the breach may not be determined, and even if determined, a full investigation may require time and resources. Any actual or perceived security incident could result in, among other things, unfavorable publicity, governmental or regulatory inquiry and oversight, difficulty in marketing our services, allegations by our customers that we have not performed our contractual obligations, litigation by affected parties, including our customers, and possible financial obligations for damages related to the theft or misuse of such information or inventory, any of which would adversely affect our business, results of operations, and financial condition.

Security breaches and other disruptions of our in-vehicle systems and related data could impact the safety of our end users and reduce confidence in us and our solutions.

Our ADAS and autonomous driving systems contain complex information technology. These systems may affect the control of various vehicle functions including engine, transmission, safety, steering, navigation, acceleration, and braking. We have designed, implemented, and tested security and safety measures intended to prevent unauthorized access to these systems. However, hackers may attempt in the future to gain unauthorized access to modify, alter, and use such systems to gain control of, or to change, the functionality, user interface and performance characteristics of vehicles incorporating our solutions, or to gain access to data stored in or generated by the vehicle. In addition, as we transition to offering solutions that involve cloud-based solutions, including increased car connectivity and over-the-air updates, our solutions may increasingly be subject to cyber threats.

We also transmit and store RoadBook™ data on the cloud and operate MaaS connectivity infrastructure with Amazon Web Services, and we depend on Amazon Web Services for securing their underlying infrastructure for the data stored on it. Hackers may attempt to infiltrate, steal, corrupt, or manipulate such data on the cloud, which could also result in our in-vehicle systems malfunctioning.

Malicious cybersecurity attacks against our in-vehicle systems that relate to automotive safety and related data, such as the data described in the preceding sentence, could potentially lead to bodily injury or death of end users, passengers, and others. Any unauthorized access to or control of vehicles incorporating our solutions or their systems could adversely impact the safety of those vehicles or outside such vehicles, or result in legal or regulatory claims or proceedings, liability, or regulatory penalties. Moreover, current as well as new law, such as the data law in Massachusetts that permits third-party access to vehicle data and related systems, could expose our vehicle systems and vehicles incorporating our systems to third-party access without appropriate security measures in place, leading to new safety and security risks, and reducing trust and confidence in our solutions. In addition, regardless of their accuracy, reports of unauthorized access to our solutions, their systems, or data, as well as other factors that may result in the perception that our solutions, their systems, or data are capable of being hacked, could harm our reputation, and adversely affect our business, results of operations, and financial condition.

Failures or perceived failures to comply with privacy, data protection, and information security requirements, or theft, loss, or misuse of personal information about our employees, customers, end users, or other third parties, or other information, could increase our expenses, damage our reputation, or result in legal or regulatory proceedings.

The theft, loss, or misuse of personal information collected, used, stored, or transferred by us to run our business could result in significantly increased business and security costs or costs related to defending legal claims. For example, data collected by the camera of our solutions during the development cycle of a project may include personal information such as license plate numbers of other vehicles, facial features of pedestrians, appearance of individuals, GPS data, and geolocation data. We anticipate that our collection of such personal information may increase as a result of the future introduction of our MaaS solutions, including any integration of Moovit, which may provide us with access to personal information of its users, and it may increase as we enter into new or adjacent businesses. Notwithstanding our efforts to protect the security and integrity of our customers' personal information, we may be required to expend significant resources to comply with data breach requirements if, for example, third parties improperly obtain and use the personal information of our customers, or we otherwise experience a data loss with respect to customers' personal information. We may also be required to expend significant resources to investigate a potential data breach. A major data breach or a major breach of our network security and systems may result in fines, penalties, and damages, harm our reputation, and adversely affect our business, results of operations, and financial condition.

Data privacy is subject to frequently changing rules and regulations, which sometimes conflict among the various jurisdictions and countries in which we provide services. We are subject to a variety of local, state, national and international laws, directives, and regulations that apply to the collection, use, retention, protection, security, disclosure, transfer, and other processing of personal data in the different jurisdictions in which we operate (“Data Protection Laws”). Any failure by us or our vendors or other business partners to comply with our public privacy notice or with U.S. federal, state, local, Israeli, Chinese, or other foreign or international Data Protection Laws could result in regulatory or litigation-related actions against us, legal liability, fines, damages, ongoing audit requirements, and other significant costs. Global privacy legislation, enforcement, and policy activity in this area are rapidly expanding and creating a complex regulatory compliance environment. Because many Data Protection Laws are new or subject to recent revisions or updates, there is often little clarity as to their interpretation or best practices for compliance, as well as a lack of precedent for the scope of enforcement. Costs to comply with Data Protection Laws and implement appropriate privacy and data protection measures are significant, and may require us to change our business practices and compliance manners. Any noncompliance could adversely affect our ability to collect, analyze, and store data, expose us to significant monetary penalties, damage to our reputation, result in suspension of online services or sites in certain countries, and even result in criminal sanctions. Even our inadvertent failure to comply with Data Protection Laws could result in audits, regulatory inquiries, or proceedings against us by governmental entities or other third parties. Any inability to adequately address data privacy or data protection, or other information security-related concerns, including in each case in respect of our use of AI technologies, even if unfounded, to successfully negotiate privacy, data protection, or information security-related contractual terms with customers, or to comply and demonstrate compliance with Data Protection Laws, could result in additional cost and liability to us, harm our reputation and brand, and could adversely affect our business, results of operations, and financial condition.

Risks Related to our Intellectual Property Rights

We may not be able to adequately protect, defend or enforce our intellectual property rights, and our efforts to do so may be costly.

The success of our solutions and business depends in part on our ability to obtain patents and other intellectual property rights and to maintain adequate legal protection for our solutions in the United States and other international jurisdictions. If we are not able to adequately protect or enforce the proprietary aspects of our technology, competitors could be able to access our proprietary technology and our business, results of operations, and financial condition could be adversely affected. We currently attempt to protect our technology through a combination of patent, copyright, trademark and trade secret laws, employee and third-party nondisclosure agreements and similar means, all of which provide only limited protection. We have filed for patent and trademark registration in the United States, Israel and in certain other international jurisdictions. However, effective intellectual property protection may be unavailable in some countries where we operate or seek to enforce our intellectual property rights or more limited in foreign jurisdictions relative to those protections available in the United States, or may not be applied for in one or more relevant jurisdictions. Even if foreign patents are granted, effective enforcement in foreign countries may not be available.

Our issued patents and trademarks and any pending or future patent and trademark applications that may result in issuances or registrations may not provide sufficiently broad protection or may not prove to be enforceable in actions against alleged infringers. The patent prosecution process is expensive, time-consuming, and complex, and we may not be able to file, prosecute, maintain, enforce, or license all necessary or desirable patent applications at a reasonable cost or in a timely manner. It is also possible that we will fail to identify patentable aspects of our research and development output in time to obtain patent protection. Failure to timely seek patent protection on products or technologies generally precludes us from seeking future patent protection on these products or technologies. Even if we do timely seek patent protection, the coverage claimed in a patent application can be significantly reduced before a patent is issued, and its scope can be reinterpreted after issuance. As a result, we may not be able to protect our proprietary rights adequately in the United States, Israel or elsewhere. Failure to adequately protect our intellectual property rights could result in our competitors offering similar products or services, potentially resulting in the loss of some of our competitive advantage and a decrease in our revenue, which would adversely affect our business, results of operations, and financial condition.

Despite our efforts, unauthorized parties may attempt to copy, reverse engineer, disclose, obtain, or use our technologies or systems. Our competitors may also be able to independently develop similar products or services that are competitive to ours or design around our issued patents. If third parties obtain patent protection with respect to such technologies, they may assert that our technology infringes, misappropriates or otherwise violates their patents and seek to charge us a licensing fee or otherwise preclude or make costlier the use of our technology. Litigation may be necessary in the future to enforce or defend our intellectual property rights, to prevent unauthorized parties from copying or reverse engineering our solutions, to determine the validity and scope of the proprietary rights of others or to block the importation of infringing products into the United States or other countries. We have been, and in the future may be, a party to claims and litigation as a result of alleged infringement, misappropriation or other violation by third parties of our intellectual property. Even when we sue other parties for such infringement, that suit may have adverse consequences for our business. Any such suit is likely to be time-consuming and expensive to resolve and may divert our management's time and attention from our business, which could adversely affect our business, results of operations, and financial condition, and legal fees related to such litigation will increase our operating expenses and may reduce our net income. Any claims we assert against perceived infringers could provoke these parties to assert counterclaims against us, alleging that we infringe, misappropriate or otherwise violate their intellectual property or alleging that our intellectual property is invalid or unenforceable. Furthermore, any litigation initiated by us could result in a court or governmental agency invalidating or rendering unenforceable our patents or other intellectual property rights upon which the suit is based, which could adversely affect our business, results of operations, and financial condition.

In addition, we depend on licenses for certain technologies from third parties and, as a result, are dependent on these third parties to protect, defend and enforce the intellectual property rights related to those technologies. This includes an agreement with Intel in which Intel grants to us a royalty-free, nonexclusive, nontransferable, and worldwide license, sublicense, or other right, as applicable, under certain patents and patent applications of other Intel subsidiaries and certain third parties, and further includes agreements we entered into with Intel in connection with the Mobileye IPO pursuant to which we are granted limited licenses from Intel for sensitive core technology relating to radar. See “— We depend on licenses for certain technologies from third parties, some of which require us to pay royalties, and our inability to use such technologies in the future would harm our ability to remain competitive” and “Risks Related to Our Relationship with Intel and Our Dual Class Structure — We may have conflicts of interest with Intel and, because of (i) certain provisions in our amended and restated certificate of incorporation relating to related person transactions and corporate opportunities, (ii) agreements we have with Intel in connection with the Mobileye IPO, and (iii) Intel's controlling beneficial ownership interest in our company, we may not be able to resolve such conflicts on terms favorable to us.”

We have previously faced claims and may in the future become subject to additional claims and litigation brought by third parties alleging infringement, misappropriation or other violation by us of their intellectual property rights.

The industry in which our business operates is characterized by a large number of patents, some of which may be of questionable scope, validity, or enforceability, and some of which may appear to overlap with other issued patents. As a result, there is a significant amount of uncertainty in the industry regarding patent protection and infringement. In addition to these patents, participants in this industry typically also protect their technology, especially embedded software, through copyrights and trade secrets. In recent years, there has been significant litigation globally involving patents and other intellectual property rights.

We have previously faced claims and may in the future be subject to additional claims and litigation alleging our infringement, misappropriation or other violation of third-party patent rights, trade secret rights or other intellectual property rights, including in respect of our use of certain AI technologies, particularly as a public company with an increased profile and visibility, and as we expand our presence in the market and to new use cases and face increasing competition. In addition, in the event that we recruit employees from other technology companies, including certain potential competitors, and these employees are used in the development of solutions that are similar to the solutions they were involved in developing for their former employers, we may become subject to claims that such employees have improperly used or disclosed trade secrets or other proprietary information. We may also in the future be subject to claims by our suppliers, employees, consultants, or contractors asserting an ownership right in our patents or patent applications, as a result of the work they performed on our behalf. These claims and any resulting lawsuits, if resolved adversely to us, could subject us to significant liability for damages, impose temporary or permanent injunctions against our solutions or business operations or invalidate or render unenforceable our intellectual property. In addition, because patent applications can take many years until the patents issue, there may be applications now pending of which we are unaware, which may later result in issued patents that our solutions may infringe. If any of our solutions infringe, misappropriate or otherwise violate a third party's patent rights, or if we wish to avoid potential intellectual property litigation on any alleged infringement, misappropriation or other violation relating to our solutions, we could be prevented from selling, or we could elect not to sell, such solutions unless we obtain additional intellectual property rights and licenses, which may involve substantial royalty or other payments and may not be available on acceptable terms or at all. Alternatively, we could be forced to redesign one or more of our solutions to avoid any infringement or allegations thereof. Procuring or developing substitute solutions that do not infringe could require significant effort and expense, and we may not be successful in any attempt to redesign our solutions to avoid any alleged infringement.

A successful claim of infringement, misappropriation or other violation against us, or our failure or inability to develop and implement non-infringing technology, or license the infringed intellectual property rights, on acceptable terms and on a timely basis, could materially adversely affect our business, financial condition, and results of operations. A party making such a claim, if successful, could secure a judgment that requires us to pay substantial damages or obtain an injunction. An adverse determination also could invalidate our intellectual property rights and adversely affect our ability to offer our solutions to our customers. Additionally, we may face liability to our customers, business partners or third parties for indemnification or other remedies in the event that they are sued for infringement, misappropriation or other violation in connection with their use of our solutions. We currently have a number of agreements in effect pursuant to which we have agreed to defend, indemnify, and hold harmless our customers, suppliers and other business partners from damages and costs which may arise from the infringement, misappropriation or other violation by our solutions of third-party patents or other intellectual property rights. The scope of these indemnity obligations varies, but may, in some instances, include indemnification for damages and expenses, including attorneys' fees. Furthermore, our defense of intellectual property rights claims brought against us or our customers, business partners or other related third parties, regardless of our success, would likely be time-consuming and expensive to resolve and would divert management's time and attention from our business, which could seriously harm our business. A claim that our solutions infringe, misappropriate or otherwise violate a third party's intellectual property rights, even if untrue, could adversely affect our relationships with our customers or suppliers, may deter future customers from purchasing our solutions and could seriously harm our reputation with our customers or suppliers, as well as our reputation in the industry at large.

We depend on licenses for certain technologies from third parties, some of which require us to pay royalties, and our inability to use such technologies in the future would harm our ability to remain competitive.

We integrate certain technologies developed and owned by third parties into our solutions, including the central processing unit cores of our EyeQ™ SoCs, through license and technology transfer agreements. Under these agreements, we are obligated to pay royalties for each unit of our solutions that we sell that incorporates such third-party technology. If we are unable to maintain our contractual relationships with the third-party licensors on which we depend, then we may not be able to find replacement technology to integrate into our solutions on a timely basis or for a similar royalty fee, in which case our business, results of operations, and financial condition would also be adversely affected.

We also are party to an agreement with Intel in which (i) we grant to Intel a royalty-free, nonexclusive, nontransferable, perpetual, irrevocable, sublicensable under certain circumstances, and worldwide license under patents and patent applications owned or controlled by us, and (ii) Intel grants to us a royalty-free, nonexclusive, nontransferable, and worldwide license, sublicense, or other right, as applicable, under certain patents and patent applications of other Intel subsidiaries and certain third parties, and we entered into agreements with Intel in connection with the Mobileye IPO in which we will have a limited license from Intel for sensitive core technology relating to radar. See “—Risks Related to Our Relationship with Intel and Our Dual Class Structure — We may have conflicts of interest with Intel and, because of (i) certain provisions in our amended and restated certificate of incorporation relating to related person transactions and corporate opportunities, (ii) agreements we have with Intel in connection with the Mobileye IPO, and (iii) Intel’s controlling beneficial ownership interest in our company, we may not be able to resolve such conflicts on terms favorable to us.”

If we are unable to continue to use or license these technologies on reasonable terms, or if these technologies fail to operate properly, we may not be able to secure alternatives in a timely manner or at all, and our ability to remain competitive would be harmed. In addition, if we are unable to successfully license technology from third parties to develop future solutions, we may not be able to develop such solutions in a timely manner or at all. The operation or security of our solutions could be impaired if errors or other defects occur in the third-party technologies we use, and it may be more difficult for us to correct any such errors and defects in a timely manner, if at all, because the development and maintenance of these technologies is not within our control. Any impairment of the technologies or of our relationship with these third parties would adversely affect our business, results of operations, and financial condition.

We may become subject to claims for remuneration or royalties for assigned service invention rights by our employees that result in litigation, which would adversely affect our business, results of operations, and financial condition.

A significant portion of our intellectual property has been developed by our employees in the course of their employment for us. Under the Israeli Patent Law, 5727-1967 (the “Patent Law”), inventions conceived by an employee in the course and as a result of his or her employment with a company are regarded as “service inventions” that belong to the employer, absent a specific agreement between the employee and employer providing otherwise. The Patent Law also provides that, in the absence of an agreement to the contrary between an employer and an employee, the Israeli Compensation and Royalties Committee (the “Committee”), a body constituted under the Patent Law, will determine whether the employee is entitled to remuneration for his or her inventions. Further, the Committee has not yet determined one specific formula for calculating this remuneration but rather uses the criteria specified in the Patent Law. Although we enter into assignment-of-invention agreements with our employees and service providers pursuant to which such individuals waive their right to remuneration for service inventions, we may face claims demanding remuneration in consideration for assigned inventions. As a consequence of such claims, we could be required to pay additional remuneration or royalties to our current and/or former employees and service providers, or be forced to litigate such claims, which would adversely affect our business, results of operations, and financial condition.

In addition to patented technology, we rely on our unpatented proprietary technology, trade secrets, processes, and know-how.

We rely on proprietary information (such as trade secrets, know-how, and confidential information) to protect intellectual property that may not be patentable and may not be subject to copyright, trademark, trade dress or service mark protection, or that we believe is best protected by means that do not require public disclosure. Such proprietary information may be owned by us or disclosed to us by our licensors, suppliers or other third parties. We generally seek to protect this proprietary information by entering into confidentiality agreements, or consulting, services or employment agreements that contain non-disclosure and non-use provisions with our employees, consultants, contractors, scientific advisors and other third parties. However, we may fail to enter into the necessary agreements, and even if entered into, these agreements may be breached or may otherwise fail to prevent disclosure, third-party infringement, misappropriation or other violation of our proprietary information, may be limited as to their term, and may not provide an adequate remedy in the event of unauthorized disclosure or use of proprietary information. We have limited control over the protection of trade secrets used by our third-party manufacturers and suppliers and could lose future trade secret protection if any unauthorized disclosure of such information occurs. In addition, our proprietary information may otherwise become known or be independently developed by our competitors or other third parties. To the extent that our employees, consultants, contractors, scientific advisors and other third parties use intellectual property owned by others in their work for us, disputes may arise as to the rights in or to related or resulting know-how and inventions. Costly and time-consuming litigation could be necessary to enforce and determine the scope of our proprietary rights, and failure to obtain or maintain protection for our proprietary information could adversely affect our competitive business position. Furthermore, laws regarding trade secret rights in certain markets where we operate may afford little or no protection to our trade secrets.

We also rely on physical and electronic security measures to protect our proprietary information, but we cannot provide assurance that these security measures will not be breached or provide adequate protection for our property. There is a risk that third parties may obtain and improperly utilize our proprietary information to our competitive disadvantage. We may not be able to detect or prevent the unauthorized use of such information or take appropriate and timely steps to protect and enforce our intellectual property rights. The theft or unauthorized use or publication of our trade secrets and other confidential business information as a result of such an incident would affect our competitive position and adversely affect our business, results of operations, and financial condition.

We use certain software and data governed by open-source licenses, which under certain circumstances could adversely affect our business, results of operations, and financial condition.

Certain of our software and data, as well as that of our customers and vendors, may be derived from or otherwise incorporate so-called “open source” software and data that is generally made available to the public by its authors and/or other third parties. Some open-source software is made available under licenses that impose certain obligations on us regarding modifications or derivative works we create based upon the open-source software. These obligations may require us to make source code for the derivative works available to the public and/or license such derivative works under a particular type of license, rather than the forms of license we customarily use to protect our intellectual property. Additionally, if we combine our proprietary software with open-source software in certain manners we could be required to release the source code of our proprietary software or to make our proprietary software available under open-source licenses to third parties at little or no cost or on unfavorable license terms. In the event that the copyright holder of, or other third party that distributes, open-source software alleges that we have not complied with the terms of an open-source license, we could incur significant legal costs defending ourselves against such allegations. If such claims are successful, we could be subject to significant damages, required to release the source code that we developed using that open-source software to the public, enjoined from distributing our software and/or required to take other actions that could adversely affect our business, results of operations, and financial condition.

While we take steps to monitor the use of open-source software in our solutions, processes and technology and try to ensure that no open-source software is used in such a way as to require us to disclose the source code to the related product, processes, or technology when we do not wish to do so, such use could inadvertently occur. Additionally, if a third-party software provider has incorporated certain types of open source software into software we license from such third party for our solutions, processes, or technology, we could, under certain circumstances, be required to disclose the source code to our solutions, processes, or technology. This could harm our intellectual property position and adversely affect our business, results of operations, and financial condition.

Further, the use of open-source software can lead to vulnerabilities that may make our software susceptible to attack, and although some open-source vendors provide warranty and support agreements, it is common for such software to be available “as is” with no warranty, indemnity, or support. Although we monitor our use of such open-source code to avoid subjecting our solutions to unintended conditions, such use, under certain circumstances, could materially adversely affect our business, financial condition and operating results and cash flow, including if we are required to take remedial action that may divert resources away from our development efforts.

Risks Related to Our Industry

An uncertain economic environment and inflationary conditions may adversely affect global vehicle production and demand for our solutions.

Our business depends on, and is directly affected by, the global automobile industry. Economic conditions in North America, Europe and Asia can have a large impact on the production volume of new vehicles, and, accordingly, have an impact on our revenue. Automotive production and sales are highly cyclical and depend on general economic conditions and other factors, including consumer spending and preferences, changes in interest rate levels and credit availability, consumer confidence and purchasing power, energy and fuel costs, fuel availability, environmental impact, governmental incentives, regulatory requirements, and political volatility, especially in energy-producing countries and growth markets. In addition, automotive production and sales can be affected by our customers' ability to continue operating in response to challenging economic conditions and in response to labor relations issues and shortages, supply chain disruptions, regulatory requirements, trade agreements and other factors. Furthermore, uncertain economic conditions and inflation may contribute to a reduction in consumer demand, which may reduce vehicle production over at least the next several quarters. In addition to these general economic factors, uncertainties in specific markets may further contribute to lower vehicle production. For example, the disruption by Russia of gas supplies to Western Europe could significantly impact industrial production, including vehicle production, in significant markets such as Germany. We cannot predict when the impact of these factors on global vehicle production will substantially diminish. More generally, the volume of automotive production in North America, Europe, China, and the rest of the world has fluctuated, sometimes significantly, from year to year, for many reasons, and such fluctuations give rise to fluctuations in the demand for our solutions. For example, towards the end of the first half of 2024, global automotive production forecasts weakened, which disproportionately impacted our core customers, primarily due to their continued market share losses in China. We cannot be certain of the severity and length of the continued volatility in the global automotive market, including macro-factors impacting our sales to OEMs in China, and the extent of the adverse effect that such volatility could have on our results of operations, financial condition and business in the long term. As a result, in addition to the impact of the current uncertainties that we anticipate to impact automotive production in the near term, adverse changes in economic or market conditions or other factors, including, but not limited to, general economic conditions, the bankruptcy of any of our customers or the closure of OEM manufacturing facilities may result in a reduction in automotive sales and production, and could have an adverse effect on our business, results of operations, and financial condition.

If OEMs are unable to maintain and increase consumer acceptance of ADAS and autonomous driving technology, our business, results of operations, and financial condition would be adversely affected.

Our future operating results will depend on the ability of OEMs to maintain and increase consumer acceptance of ADAS and autonomous driving. There is no assurance that OEMs can achieve these objectives. Market acceptance of ADAS and autonomous driving depends upon many factors, including regulatory requirements, evolving safety standards, costs, and driver preferences. Market acceptance of ADAS and autonomous driving may also be adversely affected by safety incidents involving ADAS and autonomous driving solutions, even if the incidents do not involve our solutions. We cannot be sure that ADAS and autonomous driving will achieve market acceptance on a timeline that is consistent with our expectations or development and production plans. Market acceptance of our solutions also depends on the ability of market participants, including Mobileye, to resolve technical challenges for increasingly complex ADAS and autonomous driving technology in a timely and cost-effective manner. Consumers will also need to be made aware of the advantages of our solutions, such as the advantages of our offerings compared to competing technologies, specifically those that rely solely on either cameras or lidar and radar. If consumer acceptance of ADAS and autonomous driving technology does not increase, our business, results of operations, and financial condition would be adversely affected.

Regulatory and Compliance Risks

We are subject to a variety of laws and regulations that affect our operations and that could adversely affect our business, results of operations, and financial condition.

We are subject to laws and regulations worldwide that affect our operations and that differ among jurisdictions, including automotive safety regulations, regulations governing autonomous driving technology, AI technologies, intellectual property ownership and infringement laws, tax laws, import and export regulations, anti-corruption laws, foreign exchange controls and cash repatriation restrictions, data privacy laws, competition laws, advertising regulations, employment laws, product regulations, environmental laws, health and safety requirements, consumer laws and national security laws. Compliance with such requirements can be onerous and expensive, and may otherwise adversely affect our business, results of operations, and financial condition. Further, autonomous driving and AI technologies are the subject of evolving review by various federal, state and foreign governmental and regulatory agencies, including the SEC and U.S. Federal Trade Commission. For example, in Europe, the European Union's Artificial Intelligence Act, which establishes, among other things, a risk-based governance framework for regulating AI systems operating in the European Union, entered into force on August 1, 2024. Various U.S. states and foreign jurisdictions also are applying, or are considering applying, their cybersecurity and data protection laws to AI technologies. As a result of the complexity and rapid development of autonomous vehicles (including the use of AI technologies in connection with their development), it is not possible to predict all of the legal, operational or technological risks related to our development of these technologies or our use of certain tools in connection therewith. Changes in laws and regulations governing autonomous vehicles and the use of certain technologies, such as AI, may adversely affect the ability of our business to develop and use such technologies in the future.

Although we have policies, controls, and procedures designed to help ensure compliance with applicable laws, there can be no assurance that our employees, contractors, suppliers, or agents will not violate such laws or our policies. There may also be laws and regulations that limit the functionality of our solutions or require us to adapt our solutions to retain functionality. For example, the regulatory environment in China creates challenges for the proliferation of our solutions in that market. Due to regulations there, we also depend on our partners in China in order to collect, analyze and transmit data, and such partners may choose to cease, or be unable to, continue cooperating with us. Other countries have, or may implement, similar restrictions. Violations of these laws and regulations can result in fines, criminal sanctions against us, our officers, or our employees, prohibitions on the conduct of our business and damage to our reputation. The automotive and technology industries are subject to intense media, political, and regulatory scrutiny, which can increase our exposure to government investigations, legal actions, and penalties.

Our business, results of operations, and financial condition may be adversely affected by changes in automotive safety regulations or concerns that drive regulations that increase our costs or delay or halt adoption of our solutions.

There are a variety of international, foreign, federal, and state regulations that apply to vehicle safety that could affect the marketability of our solutions. Regulations relating to autonomous driving include many existing vehicle standards that were not originally intended to apply to vehicles that may not have a human driver, and autonomous driving may never be globally approved. The expected launch of our AMaaS solutions in many jurisdictions remains subject to regulatory review and approvals, and the regulatory standards relating to AMaaS are still developing and remain subject to substantial uncertainty. There has been relatively little mandatory government regulation of the self-driving industry to date. Currently, there are no Federal Motor Vehicle Safety Standards that relate to the performance of self-driving technology and no widely accepted uniform standards to certify self-driving technology and its commercial use on public roads. It is also possible that future self-driving regulations are not standardized, and our technology could become subject to differing regulations across jurisdictions. For example, in Europe, certain vehicle safety regulations apply to automated braking and steering systems, and certain treaties also restrict the legality of certain higher levels of automation, while certain U.S. states have legal restrictions on automation that many other states are also considering. Such regulations continue to rapidly change, which increases the likelihood of varying complex or conflicting regulations or may limit global adoption, impede our strategy, or negatively impact our long-term expectations for our investments in these areas.

Government safety regulations are subject to change based on a number of factors that are not within our control, including new scientific or technological data, adverse publicity regarding the industry, recalls, concerns regarding safety risks of autonomous driving and ADAS, accidents involving our solutions or those of our competitors, domestic and foreign political developments or considerations and litigation relating to our solutions and our competitors' products. Changes in government regulations, especially those relating to ADAS and autonomous driving, could adversely affect our business, results of operations, and financial condition.

Regulations governing the automotive industry impose stringent compliance and reporting requirements in response to product recalls and safety issues in the automotive industry, including a duty to report, subject to strict timing requirements, safety defects with, or reports of injuries relating to, our solutions and requirements that a manufacturer recall and repair vehicles that contain safety defects or fail to comply with applicable safety standards. If we do not rapidly address any safety concerns or defects involving our solutions, our business, results of operations, and financial condition would be adversely affected.

We are subject to risks related to trade policies, sanctions, and import and export controls.

Trade policies and international disputes at times result in increased tariffs, trade barriers and other restrictions, which can increase our manufacturing costs, make our solutions less competitive, reduce demand for our solutions, limit our ability to sell to certain customers, limit our ability to procure components or raw materials or impede or slow the movement of our goods across borders. Increasing protectionism and economic nationalism may lead to further changes in trade policies and regulations, domestic sourcing initiatives, or other formal and informal measures.

Likewise, national security and foreign policy concerns may prompt governments to impose trade or other restrictions, which could make it more difficult to sell our solutions in, or restrict our access to, certain markets. In this regard, our business activities are subject to various trade and economic sanctions laws and regulations, including, without limitation, the U.S. Department of the Treasury's Office of Foreign Assets Control's sanctions programs and the Export Administration Regulations issued by the U.S. Department of Commerce. These rules may prohibit or restrict our ability to, directly or indirectly, conduct activities or dealings in or with certain countries or involving certain persons, or otherwise affect our business. New measures imposed by the United States, the European Union, or others could restrict certain of our operations and adversely affect our business, results of operations, and financial condition, including for example the controls announced by BIS in January 2025 on advanced computing chips and certain closed AI model weights. Although we take steps to comply with applicable laws and regulations, our failure to successfully comply with applicable sanctions or export control rules may expose us to negative legal and business consequences, including civil or criminal penalties and government investigations.

In particular, in response to Russia's invasion of Ukraine, the United States, the European Union, and several other countries have imposed far-reaching sanctions and export control restrictions on Russian entities and individuals. See "— The current conflict between Ukraine and Russia has exacerbated market instability and disrupted the global economy."

Additionally, tensions between the United States and China have led to increased tariffs and trade restrictions, including tariffs applicable to some of our solutions, and have affected customer ordering patterns. In addition to imposing economic sanctions on certain Chinese individuals and entities, the United States has imposed restrictions on the export of U.S.-regulated products and technology to certain Chinese technology companies. For example, the United States has enacted, and subsequently updated, controls on certain transactions involving items for semiconductor manufacturing end uses and advanced computing integrated circuits destined for China. Most recently, BIS adopted final rules in January 2025 prohibiting certain transactions involving the sale or import of connected vehicles integrating specific hardware or software with a sufficient nexus to China or Russia. Conversely, the People's Republic of China has implemented a series of industrial policies and other measures, including its "Made in China 2025" policy, to incentivize the development and growth of key industries domestically, such as robotics, aerospace and semiconductors, and to reduce reliance on foreign technology. These policies have also extended to ADAS and autonomous vehicle technologies, which has led to Chinese OEMs and other businesses choosing solutions from our Chinese competitors rather than our products, despite any competitive advantage our products may have in respect of price and/or performance. Although we do not believe that these recent controls and industrial policies will materially impede our ability to conduct our business, there can be no assurance that these or future restrictions would not materially adversely affect our financial performance. We derive significant revenue from China. In 2024 and 2023, we derived approximately 26% and 31% respectively, of our revenue from shipments of products to China. It is difficult to predict what further trade-related actions governments may take, which may include trade restrictions and additional or increased tariffs and export controls imposed on short notice, and we may be unable to quickly and effectively react to or mitigate such actions.

Trade disputes and protectionist measures, or continued uncertainty about such matters, could result in declining consumer confidence and slowing economic growth or recession, and could cause our customers to reduce, cancel, or alter the timing of their purchases with us. Sustained geopolitical tensions could lead to long-term changes in global trade and technology supply chains, and decoupling of global trade networks, which could adversely affect our business, results of operations, and financial condition.

Given our international supply chain and distribution, we are subject to import and export laws of multiple countries. Failure to comply with the requirements of such laws may lead to the imposition of additional taxes or duties on imports or exports, fines, or penalties.

The current conflict between Ukraine and Russia has exacerbated market instability and disrupted the global economy.

The current conflict between Ukraine and Russia has caused uncertainty about economic and political stability, increasing volatility in the credit and financial markets and disrupting the global economy. The United States, the European Union, and several other countries have imposed far-reaching sanctions and export control restrictions on Russian entities and individuals, including for example recent additional sanctions imposed by the European Union under Article 12g of Council Regulation (EU) No 833/2014. These measures could constrain our ability to work with Russian companies or individuals in connection with the development of our solutions in the future. These sanctions and export controls may also contribute to higher oil and gas prices and inflation, which could reduce demand in the global automotive sector and therefore reduce demand for our solutions. There is also a risk that Russia, as a retaliatory action to sanctions, may launch cyberattacks against the United States, the European Union, or other countries or their infrastructures and businesses. Additional consequences of the conflict may include diminished liquidity and credit availability, declines in consumer confidence, declines in economic growth, and various shortages and supply chain disruptions. While we do not currently directly rely on goods or services sourced in Russia or Ukraine and thus have not experienced any direct disruptions, we may experience indirect disruptions in our supply chain. Any of the foregoing factors, including developments or effects that we cannot yet predict, may adversely affect our business, results of operations, and financial condition.

Risks Related to Operations in Israel

Conditions in Israel affect our operations and may limit our ability to produce and sell our solutions.

Although we are incorporated under the laws of the State of Delaware, our headquarters and research and development center are located in the State of Israel, and as of December 28, 2024, substantially all of our equipment and tangible long-lived assets were located in Israel. Many of our employees, including certain members of our management, operate from our offices that are located in Jerusalem, Israel. In addition, a number of our officers and directors are residents of Israel. Accordingly, political, economic, and military conditions in Israel and the surrounding region may directly affect our business and operations. In recent years, Israel has been engaged in sporadic armed conflicts with Hamas, an Islamist terrorist group that controls the Gaza Strip, with Hezbollah, an Islamist terrorist group that controls large portions of southern Lebanon, and with Iranian-backed military forces in Syria. In addition, Iran has threatened to attack Israel and may be developing nuclear weapons. On October 7, 2023, Hamas launched a series of attacks on civilian and military targets in Southern and Central Israel, to which the Israel Defense Forces have responded. In addition, both Hezbollah and the Houthi movement have attacked military and civilian targets in Israel, to which Israel has responded, including through increased air and ground operations in Lebanon. In addition, the Houthi movement has attacked international shipping lanes in the Red Sea. Further, on April 13, 2024 and October 1, 2024, Iran launched a series of drone and missile strikes against Israel, to which Israel has responded. How long and how severe the current conflict in Gaza, Northern Israel, Lebanon or the broader region becomes is unknown at this time and any continued clash among Israel, Hamas, Hezbollah, Iran or other countries or militant groups in the region may escalate in the future into a greater regional conflict. To date our operations have not been materially affected, although as of January 31, 2025 approximately 3.7% of our employees have been called to reserve duty in the Israel Defense Forces. However, any hostilities involving Israel, regional geopolitical instability or the interruption or curtailment of trade or diplomatic relations between Israel and its trading partners as a result thereof could adversely affect our business, results of operations, and financial condition.

Our commercial insurance does not cover losses that may occur as a result of events associated with war and terrorism in Israel. Although the Israeli government currently covers the reinstatement value of certain direct damages that are caused by terrorist attacks or acts of war, such coverage would likely be limited, may not be applicable to our business and may not reinstate our loss of revenue or economic losses more generally. Furthermore, we cannot assure you that this government coverage will be maintained or that it will sufficiently cover our potential damages. Any losses or damages incurred by us could have a material adverse effect on our business. Any armed conflicts or political instability in the region would likely negatively affect business conditions and could harm our business, results of operations, and financial condition. Furthermore, depending on developments in the region, it may become difficult, or impossible, to renew or purchase appropriate policies pursuant to reasonable commercial terms, or insurers may condition coverage on our acceptance of certain limitations or exclusions.

Further, in the past, the State of Israel and Israeli companies have been subjected to economic boycotts. Several countries still restrict doing business with the State of Israel and with Israeli companies. These restrictive laws and policies may have an adverse

impact on our operating results, financial condition, or the expansion of our business. A campaign of boycotts, divestment and sanctions has been undertaken against Israel, which could also adversely impact our business, results of operations, and financial condition.

Our operations may be disrupted by the obligations of personnel to perform military service as a result of current or future military actions involving Israel.

Some of our employees in Israel are obligated to perform annual reserve duty in the Israeli military for several days, and in some cases more, of annual military reserve duty each year until they reach the age of 40 (or older, for reservists who are military officers or who have certain occupations) and are subject to being called for additional active duty under emergency circumstances. In response to increased tension and hostilities, there have been occasional call-ups of military reservists, and it is possible that there will be additional call-ups in the future. For example, as a result of Israel's current war against Hamas in the Gaza Strip and tensions with Hezbollah in northern Israel, as of January 31, 2025 approximately 3.7% of our employees have been called to reserve duty in the Israel Defense Forces. To date, our operations have not been materially affected. See “— Conditions in Israel affect our operations and may limit our ability to produce and sell our solutions.” We cannot predict the full impact of these conditions on us in the future, particularly if emergency circumstances or an escalation in the political situation occurs. If many of our employees are called for active duty, our operations in Israel and our business may not be able to function at full capacity, and our business, results of operations, and financial condition could be adversely affected.

The tax benefits that are available to us under Israeli law require us to meet various conditions and may be terminated or reduced in the future, which could increase our costs and taxes.

We believe that our Israeli subsidiary is eligible for certain tax benefits provided to a “Special Preferred Technology Enterprise” under the Israeli Law for the Encouragement of Capital Investments, 1959, and its regulations, as amended (the “Investment Law”), including, inter alia, a reduced corporate tax rate of 6% on Israeli preferred technology taxable income, as defined in the Investment Law. In order to remain eligible for the tax benefits for a Special Preferred Technology Enterprise, our Israeli subsidiary must continue to meet certain conditions stipulated in the Investment Law and its regulations, as amended. For example, a Special Preferred Technology Enterprise must be part of a group of companies with aggregate annual revenue of at least 10 billion New Israeli Shekels. If Intel does not maintain sufficient holdings in us so that we are a consolidated group with Intel, and if we do not otherwise meet the revenue requirement as a standalone company, we would no longer meet the consolidated group income requirement to maintain our status as a Special Preferred Technology Enterprise and would instead be considered a Preferred Technology Enterprise, resulting in a higher effective corporate tax rate in Israel. If we fail to meet certain additional conditions stipulated in the Investment Law, including a minimal amount or ratio of annual research and development expenditures and research and development employees, as well as having at least 25% of our annual income derived from exports, we would also lose our status as a Preferred Technology Enterprise, resulting in an even higher effective corporate tax rate in Israel. Additionally, if our Israeli subsidiary increases its activities outside of Israel through acquisitions, then its expanded activities might not be eligible for inclusion in future Israeli tax benefit programs.

It may be difficult to enforce a U.S. judgment against our officers and directors, or to assert U.S. securities laws claims in Israel or serve process on our non-U.S. officers and directors.

Not all of our directors or officers are residents of the United States, and most of their and our assets are located outside the United States. Service of process upon our non-U.S. resident directors and officers and enforcement of judgments obtained in the United States against us or our non-U.S. our directors and officers may be difficult to obtain within the United States. Additionally, we have been informed by our legal counsel in Israel that it may be difficult to assert claims under U.S. securities laws in original actions instituted in Israel or obtain a judgment based on the civil liability provisions of U.S. federal securities laws. Israeli courts may refuse to hear a claim based on a violation of U.S. securities laws against us or our non-U.S. officers and directors because Israel may not be the most appropriate forum to bring such a claim. In addition, even if an Israeli court agrees to hear a claim, it may determine that Israeli law and not U.S. law is applicable to the claim. If U.S. law is found to be applicable, then the content of applicable U.S. law must be proved as a fact, which can be a time-consuming and costly process. Certain matters of procedure will also be governed by Israeli law. There is little binding case law in Israel addressing the matters described above. Additionally, Israeli courts might not enforce judgments rendered outside Israel, which may make it difficult to collect on judgments rendered against us or our non-U.S. officers and directors.

Moreover, an Israeli court will not enforce a non-Israeli judgment if it was given in a state whose laws do not provide for the enforcement of judgments of Israeli courts (subject to exceptional cases), if its enforcement is likely to prejudice the sovereignty or security of the State of Israel, if it was obtained by fraud or in the absence of due process, if it is at variance with another valid judgment

that was given in the same matter between the same parties, or if a suit in the same matter between the same parties was pending before a court or tribunal in Israel at the time the foreign action was brought.

Risks Related to our Relationship with Intel and our Dual Class Structure

The dual class structure of our common stock has the effect of concentrating voting control with Intel, and Intel will beneficially own shares of our Class B common stock, representing a majority of the shares of our common stock and approximately 98.6% of the voting power of our outstanding common stock as of December 28, 2024. This will limit or preclude your ability to influence corporate matters.

Our Class B common stock has ten votes per share, and our Class A common stock has one vote per share. Because of the 10-to-1 voting ratio between our Class B common stock and our Class A common stock, Intel, which is the beneficial holder of 711,500,000 shares of Class B common stock, beneficially owns approximately 98.6% of the voting power of our outstanding common stock as of December 28, 2024. Because Intel beneficially holds significantly more than a majority of the combined voting power of our common stock, it is able to control all matters submitted to our stockholders for approval.

As a result, for the foreseeable future, Intel will have significant influence over the management and affairs of our company and over the outcome of all matters submitted to our stockholders for approval, including the election of directors and significant corporate transactions, such as a merger, consolidation, or sale of substantially all of our assets, even if its stock holdings will be significantly diluted to represent less than 50% of the outstanding shares of our common stock. In addition, this may prevent or discourage unsolicited acquisition proposals or offers for our common stock that you may feel are in your best interest as one of our stockholders. Intel may have interests that differ from yours and may vote in a way with which you disagree, and which may be adverse to your interests. This control, including any negative perception by shareholders of Intel or its actions, may adversely affect the trading price of our Class A common stock.

We are a “controlled company” within the meaning of the corporate governance standards of Nasdaq. As a result, we qualify for, and intend to rely on, exemptions from certain corporate governance standards. You will not have the same protections afforded to stockholders of companies that are subject to all corporate governance requirements of Nasdaq.

So long as more than 50% of the voting power for the election of our directors is held by an individual, a group or another company, we will qualify as a “controlled company” under listing requirements of Nasdaq. Intel beneficially holds a majority of the voting power of our outstanding common stock. As a result, we are a “controlled company” under the Nasdaq rules. As a controlled company, we will be exempt from certain Nasdaq corporate governance requirements, and we intend to continue to rely on such exemptions, including those that would otherwise require our Board of Directors to have a majority of independent directors and require that we establish a compensation committee and nominating committee comprised entirely of independent directors, or otherwise ensure that the compensation of our executive officers and nominees for directors are determined or recommended to our Board of Directors by the independent members of our Board. To the extent we continue to rely on one or more of these exemptions, holders of our Class A common stock will not have the same protections afforded to stockholders of companies that are subject to all of the corporate governance requirements of Nasdaq.

Our dual class structure may depress the trading price of our Class A common stock.

We cannot predict whether our dual class structure will result in a lower or more volatile market price of our Class A common stock or in adverse publicity or other adverse consequences. For example, certain index providers have announced restrictions on including companies with multiple-class share structures in certain of their indexes. S&P Dow Jones and FTSE Russell have announced changes to their eligibility criteria for inclusion of shares of public companies on certain indices, including the S&P 500. These changes exclude companies with multiple classes of shares of common stock from being added to these indices. In addition, several stockholder advisory firms have announced their opposition to the use of multiple class structures. As a result, the dual class structure of our common stock may prevent the inclusion of our Class A common stock in these indices and may cause stockholder advisory firms to publish negative commentary about our corporate governance practices or otherwise seek to cause us to change our capital structure. Any such exclusion from indices could result in a less active trading market for our Class A common stock.

Any actions or publications by stockholder advisory firms critical of our corporate governance practices or capital structure could also adversely affect the value of our Class A common stock.

We may have conflicts of interest with Intel and, because of (i) certain provisions in our amended and restated certificate of incorporation relating to related person transactions and corporate opportunities, (ii) agreements we entered into with Intel in connection with the Mobileye IPO, and (iii) Intel's controlling beneficial ownership interest in our company, we may not be able to resolve such conflicts on terms favorable to us.

Conflicts of interest may arise between Intel and us in a number of areas relating to our ongoing relationship. Potential conflicts of interest that we have identified include, but are not limited to, the following:

- *Certain of our directors may have conflicts of interest.* Each of Patrick Bombach, Christine Pambianchi, and Saf Yeboah-Amankwah serves both as our director and in a senior management role at Intel. In addition, Frank D. Yeary serves both as our director and as Interim Executive Chair and a director of Intel. Such directors owe fiduciary duties to our company pursuant to Delaware law, but these relationships could create, or appear to create, conflicts of interest when these persons are faced with decisions with potentially different implications for Intel and us.

- *Sale of shares of our common stock.* Intel may decide to sell all or a portion of our shares that it holds to a third party, including to one of our competitors, thereby giving that third-party substantial influence over our business and our affairs and possibly depressing the trading price of our Class A common stock. Such a sale could be in conflict with your interests. Prior to any such time as our Class B common stock is distributed to security holders of Intel in a transaction (including any distribution in exchange for shares of Intel's or its successor-in-interest's common stock or other securities) intended to qualify as a distribution under Section 355 of the Code, or any corresponding provision of any successor statute, shares of our Class B common stock will automatically be converted into shares of Class A common stock upon the transfer of such shares of Class B common stock by Intel other than to any of Intel's successors.

- *Developing business relationships with Intel's competitors.* We may from time to time partner with, purchase from, and sell to a number of companies that compete with Intel. These companies may be less willing or unwilling to develop and maintain relationships with us, and may favor our competitors or may view us as competitors, because of our relationship with Intel.

- *Allocation of business opportunities.* Business opportunities may arise that both we and Intel find attractive, and which would complement our businesses. We may be prevented from taking advantage of new business opportunities that Intel has entered into. Furthermore, our amended and restated certificate of incorporation provides that, until the later of (i) the first date on which Intel ceases to beneficially own 20% or more of our outstanding shares of common stock and (ii) the date upon which none of our officers and/or directors are also officers and/or directors of Intel, (x) we will waive any interest or expectancy in potential transactions presented to our directors and officers who are also directors and/or officers of Intel unless expressly offered to such person in his or her capacity as our director and/or officer, as applicable, and (y) Intel shall have the right to, and shall have no duty not to, engage in the same or similar business activities or lines of business as we do, do business with any of our clients or customers, and employ or otherwise engage any of our officers or employees.

- *Sale of our products on favorable terms.* Under the terms of the Master Transaction Agreement we entered into with Intel in connection with the Mobileye IPO, so long as Intel holds at least 20% of our common stock, we will sell Intel our commercially available products, including EyeQ™ SoCs, for internal use, but not for resale on a standalone or bundled basis. We and Intel also agree pursuant to the Master Transaction Agreement to hold the other in most favored status with respect to products purchased or sold for internal use, meaning that the product prices, terms, warranties, and benefits provided between us and Intel shall be comparable to or better than the equivalent terms being offered by the party providing the products to any single, present customer of such party.

- *Worldwide and perpetual license to patents.* We are party to an agreement with Intel under which (i) we grant to Intel a royalty-free, nonexclusive, nontransferable, perpetual, irrevocable, sublicensable under certain circumstances, and worldwide license under patents and patent applications owned or controlled by us, and (ii) Intel grants to us a royalty-free, nonexclusive, nontransferable, and worldwide license, sublicense, or other right, as applicable, under certain patents and patent applications of other Intel subsidiaries and certain third parties. Any license, sublicense, or other right granted by Intel to us with respect to third-party patents and patent applications (or specific claims thereof) included in the grant in clause (ii) may be revoked (effective as of the date specified by Intel) by Intel, in whole or in part, at any time (and automatically terminates once Intel can no longer extend such rights to us under the applicable third-party license agreement), and all licenses, sublicenses or other rights from Intel with respect to patents and patent applications of other Intel subsidiaries included in the grant by Intel to us in clause (ii) automatically terminate once Intel's ownership of our common stock falls below 50%. The license granted by us to Intel in clause (i) survives even if Intel's ownership of our common stock falls below 50%, but solely with respect to patents and patent applications owned or controlled by us as of or prior to such time. The agreement will continue until the expiration of the last to expire of the patents and patent applications included in the grants in clauses (i) and (ii), unless earlier terminated by Intel at any time for its convenience. If any of our licenses from, sublicenses or other rights Intel were to terminate for any reason, we may be unable to replace such licenses, sublicenses or other rights at prices or on terms as favorable as those Intel provides, if at all, and that could adversely affect our business, results of operations, and financial condition.

- *Limited license from Intel for certain technology related to radar.* Intel has granted us a limited license for sensitive core technology relating to radar pursuant to a Technology and Services Agreement. The license is limited to the development of a specific type of radar for specific applications. Any radar products which do not comply with this definition will require a separate license from Intel, at Intel's discretion. Intellectual property developed under the agreement, either solely or jointly with Intel, regarding the radar technology, except for certain rights to specifically identified radar technology which is developed solely by us following the Mobileye IPO, will be assigned by us to Intel. As a result we will not own most new radar intellectual property, even if it is developed solely by us. If we are unable to continue to use or license sensitive core technology related to radar from Intel, we may not be able to secure alternatives in a timely manner, or at all, and our ability to remain competitive would be harmed, which could adversely affect our business, results of operations and financial condition. See "Item 1A. Risk Factors — Risks Related to Our Business — If we are unable to develop and introduce new solutions and improve existing solutions in a cost-effective and timely manner, then our competitive position would be negatively impacted and our business, results of operations and financial condition would be adversely affected" and "Risk Factors — Risks Related to our Intellectual Property Rights — We depend on licenses for certain technologies from third parties, some of which require us to pay royalties, and our inability to use such technologies in the future would harm our ability to remain competitive."

We are licensed to sell the radar products only for ADAS and AV solutions for automobiles and to certain types of customers (Tier 1s, OEMs, MaaS). The Technology and Services Agreement has a term of two years, and will automatically renew for one-year renewal periods, unless the agreement is terminated for a party's material breach, a party's bankruptcy or insolvency, or advance notice of nonrenewal is given, however, termination of the agreement does not affect certain licenses granted to us by Intel in respect of the radar product. In addition, the agreement includes limitations on our ability (except after review and approval by Intel) to file a patent application based on or using the radar intellectual property licensed to us under the agreement, or information in Intel's radar patents during the term of the agreement and for five years after the completion of the development of the last Mobileye sensor product.

We expect Intel will continue to beneficially hold a majority of the voting power of our common stock and we and Intel expect to continue as strategic partners, collaborating on projects to pursue the growth of computing in the automotive sector. Intel may from time to time make strategic decisions that it believes are in the best interests of its business as a whole, including our company. These decisions may be different from the decisions that we would have made on our own. Intel's decisions with respect to us or our business, including any related party transactions between Intel and us, may be resolved in ways that favor Intel and its stockholders, which may not coincide with the interests of our other stockholders.

Although we entered into the Tax Sharing Agreement with Intel under which our tax liabilities effectively will be determined based upon, subject to certain assumptions, our and/or our subsidiaries' assets and activities, we nonetheless could be held liable for the tax liabilities of other members of any consolidated, combined or unitary tax group of Intel and/or its subsidiaries.

We have historically been included in Intel's consolidated group (the "Consolidated Group") for U.S. federal income tax purposes, as well as in certain consolidated, combined, or unitary groups that include Intel and/or certain of its subsidiaries for state and local income tax purposes (each, a "Combined Group"). We entered into the Tax Sharing Agreement with Intel in connection with the Mobileye IPO. Pursuant to the Tax Sharing Agreement, we generally are required to make payments to Intel such that, with respect to tax returns for any taxable period in which we or any of our subsidiaries are included in the Consolidated Group or any Combined Group, the amount of taxes to be paid by us will be determined by computing the excess (if any) of any taxes due on any such return over the amount that would otherwise be due if such return were recomputed by excluding us and/or our included subsidiaries.

We have previously been included in the Consolidated Group for the most recent annual period and expect to be included in the Consolidated Group going forward. Each member of a consolidated group during any part of a consolidated return year is jointly and severally liable for tax on the consolidated return of such year and for any subsequently determined deficiency thereon. Similarly, in some jurisdictions, each member of a consolidated, combined or unitary group for state, local, or foreign income tax purposes is jointly and severally liable for the state, local, or foreign income tax liability of each other member of the consolidated, combined or unitary group. Accordingly, for any period in which we are included in the Consolidated Group or any Combined Group, we could be liable in the event that any income tax liability was incurred, but not discharged, by any other member of any such group.

In order to preserve the ability for Intel to distribute its shares of our Class B common stock pursuant to a tax-free spin-off under U.S. federal income tax law, we may be prevented from pursuing opportunities to raise capital, effectuate acquisitions, or provide equity incentives to our employees, which could adversely affect our business, results of operations, and financial condition.

Under current U.S. federal income tax law, in order to consummate a tax-free spin-off of our stock, Intel would need to have beneficial ownership of our stock representing at least 80% of the total voting power and 80% of each class of non-voting capital stock. Nevertheless, if Intel were to decide to pursue a possible spin-off, we have agreed to cooperate with Intel and to take any and all actions reasonably requested by Intel in connection with such a transaction. Our rights, responsibilities and obligations with respect to any possible spin-off are set forth in the Master Transaction Agreement and Tax Sharing Agreement. For example, in the event Intel completes a spin-off, we have agreed not to take certain actions, such as certain asset sales or contributions, mergers, stock issuances, or stock sales within the two years following the spin-off without first obtaining the opinion of tax counsel or an IRS ruling to the effect that such actions will not result in the spin-off failing to qualify as a tax-free spin-off. Additionally, under our amended and restated certificate of incorporation, until the first date on which Intel ceases to beneficially own 20% or more of the outstanding shares of our common stock, the prior affirmative vote or written consent of Intel, as the holder of the Class B common stock, is required in order to authorize us to issue any stock or other equity securities except to our subsidiaries or pursuant to our employee benefit plans limited to a share reserve of 5% of the outstanding number of shares of our common stock on the immediately preceding December 31. Intel's intention to retain its ability to effectuate a tax-free spin-off of our stock may cause Intel to decide not to consent to such issuances. See "— Certain corporate actions by us would require the prior consent of Intel, and there can be no guarantee that Intel will consent to such matters, even if they are in our best interests." These requirements could prevent us from pursuing opportunities to raise capital, effectuate acquisitions, or provide equity incentives to our employees, which could adversely affect our business, results of operations, and financial condition.

Certain corporate actions by us would require the prior consent of Intel, and there can be no guarantee that Intel will consent to such actions, even if they are in our best interests.

Our amended and restated certificate of incorporation provides that, in addition to any other vote required by law or by our amended and restated certificate of incorporation, until the first date on which Intel ceases to beneficially own 20% or more of the outstanding shares of our common stock, the prior affirmative vote or written consent of Intel as the holder of the Class B common stock is required in order to authorize us to take certain corporate actions. There can be no guarantee that Intel will consent to such actions, even if they are in our best interests.

We have historically utilized and plan to continue to utilize various administrative services and licenses, sublicenses and other rights provided by Intel, and if we are unable to continue utilizing such services and/or licenses, sublicenses or other rights we may fail to replace them at prices or on terms as favorable as those Intel provides. In addition, we have granted Intel a worldwide and perpetual license to our patents and patent applications.

We have historically utilized various administrative, financial, and other services provided by Intel. In addition, we are party to an agreement with Intel under which (i) we grant to Intel a royalty-free, nonexclusive, nontransferable, perpetual, irrevocable, sublicensable under certain circumstances, and worldwide license under patents and patent applications owned or controlled by us, and (ii) Intel grants to us a royalty-free, nonexclusive, nontransferable, and worldwide license, sublicense, or other right, as applicable, under certain patents and patent applications of other Intel subsidiaries and certain third parties. Any license, sublicense, or other right granted by Intel to us with respect to third-party patents and patent applications (or specific claims thereof) included in the grant in clause (ii) may be revoked (effective as of the date specified by Intel) by Intel, in whole or in part, at any time (and automatically terminates once Intel can no longer extend such rights to us under the applicable third-party license agreement), and all licenses, sublicenses or other rights from Intel with respect to patents and patent applications of other Intel subsidiaries included in the grant by Intel to us in clause (ii) automatically terminate once Intel's ownership of our common stock falls below 50%. The license granted by us to Intel in clause (i) survives even if Intel's ownership of our common stock falls below 50%, but solely with respect to patents and patent applications owned or controlled by us as of or prior to such time. The agreement will continue until the expiration of the last to expire of the patents and patent applications included in the grants in clauses (i) and (ii), unless earlier terminated by Intel at any time for its convenience. If any of our licenses, sublicenses or other rights from Intel were to terminate for any reason, we may be unable to replace such licenses, sublicenses or other rights at prices or on terms as favorable as those Intel provides, if at all, and that could adversely affect our business, results of operations, and financial condition.

Intel provides us with administrative, financial, legal, tax, and other services pursuant to the Administrative Services Agreement and certain technologies and products that may be used in the development, manufacture, and commercialization of our solutions pursuant to the Technology and Services Agreement. If we are unable to maintain these contractual relationships with Intel, we may fail to replace such services and/or licenses, sublicenses or other rights at prices or on terms as favorable as those Intel provides, and that could adversely affect our business, results of operations, and financial condition.

Risks Related to Ownership of Our Class A Common Stock

The market price of our Class A common stock may fluctuate, and you could lose all or part of your investment.

The stock market in general has been, and the market price of our Class A common stock specifically is, subject to fluctuation, whether due to, or irrespective of, our operating results and financial condition. The market price of our Class A common stock on Nasdaq may fluctuate as a result of a number of factors, some of which are beyond our control, including, but not limited to:

- announcements by regulators and other safety organizations regarding ADAS, autonomous driving and related technology;
- publicized accidents involving ADAS and autonomous driving technology, whether developed by us or our competitors;
- market acceptance of our solutions;
- fluctuations in supply and demand for our products;
- announcements of the results of research and development projects by us or our competitors;
- announcements by others relating to autonomous driving technology and its adoption by OEMs;
- development of new competitive systems and products by others;
- changes in earnings estimates or recommendations by securities analysts;
- developments concerning our intellectual property rights;

[Table of Contents](#)

- loss of key personnel, particularly Professor Shashua;
- changes in the cost of satisfying our warranty obligations;
- loss of key customers;
- disruptions to our and the global supply chain;
- macroeconomic irregularities such as worsening inflationary trends, volatile interest rates and labor shortages;
- delays between our expenditures to develop and market new or enhanced products and the generation of sales from those products;
- changes in the amount that we spend to develop, acquire, or license new products, technologies, or businesses;
- changes in our research and development and operating expenditures;
- variations in our and our competitors' results of operations and financial condition;
- our sale or proposed sale or the sale or proposed sale by Intel (or other actions taken by Intel) or other significant stockholders of our common stock or other securities in the future; and
- general market conditions and other factors, including factors unrelated to our operating performance.

These factors and any corresponding price fluctuations may materially and adversely affect the market price of our shares of Class A common stock and result in substantial losses being incurred by our investors. Market prices for securities of technology companies historically have been very volatile. The market for these securities has from time to time experienced significant price and volume fluctuations for reasons unrelated to the operating performance of any one company. In the past, following periods of market volatility, public company stockholders have often instituted securities class action litigation in the United States. If we were involved in securities litigation, then it could impose a substantial cost upon us and divert the resources and attention of our management from our business.

We do not expect to pay dividends in the foreseeable future.

Other than in connection with the Reorganization, we have never declared or paid cash dividends on our capital stock. We currently intend to retain any future earnings to finance the operation and expansion of our business, and we do not expect to declare or pay any dividends for the foreseeable future.

The requirements of being a public company may strain our resources and divert management's attention.

As a public company, we are subject to the reporting requirements of the Exchange Act, the Sarbanes-Oxley Act of 2002 ("Sarbanes-Oxley Act") and stock exchange rules promulgated in response to the Sarbanes-Oxley Act. The requirements of these rules and regulations have and will continue to increase our legal and financial compliance costs, make some activities more difficult, time-consuming, or costly and increase demand on our systems and resources. As a public company, we are obligated to file with the SEC annual and quarterly information and other reports that are specified in the Exchange Act, and therefore need to have the ability to prepare financial statements that are compliant with all SEC reporting requirements on a timely basis. In addition, we continue to be subject to other reporting and corporate governance requirements, including certain requirements of Nasdaq and certain provisions of the Sarbanes-Oxley Act and the regulations promulgated thereunder, which impose significant compliance obligations upon us. The Sarbanes-Oxley Act requires, among other things, that we maintain effective disclosure controls and procedures and internal control over financial reporting. In order to maintain and, if required, improve our disclosure controls and procedures and internal control over financial reporting to meet this standard, significant resources and management oversight may be required, and management's attention may be diverted from other business concerns.

Furthermore, though we have been indirectly subject to these requirements previously as a subsidiary of Intel, we might not be successful in implementing these requirements. The increased costs of compliance with public company reporting requirements and our potential failure to satisfy these requirements could have an adverse effect on our business, results of operations, and financial condition.

Failure to establish and maintain effective internal control over financial reporting in accordance with Section 404 of the Sarbanes-Oxley Act could have an adverse effect on our business, results of operations, and financial condition.

As a public company, we are required to comply with the SEC's rules implementing Sections 302 and 404 of the Sarbanes-Oxley Act, which require management to certify financial and other information in our quarterly and annual reports and provide an annual management report on the effectiveness of internal control over financial reporting, to which our auditors need to attest in accordance with guidelines set forth by the Public Company Accounting Oversight Board ("PCAOB"). We may in the future identify material weaknesses when evaluating our internal control over financial reporting that we may not be able to remediate in time to meet the applicable deadline imposed upon us for compliance with the requirements of Section 404 of the Sarbanes-Oxley Act. Testing and maintaining our internal control over financial reporting may also divert management's attention from other matters that are important to the operation of our business. In addition, if we fail to achieve and maintain the adequacy of our internal controls, as such standards are modified, supplemented, or amended from time to time, then we may not be able to ensure that we can conclude on an ongoing basis that we have effective internal control over financial reporting in accordance with Section 404 of the Sarbanes-Oxley Act. We cannot be certain as to the timing of completion of our evaluation, testing and any remediation actions or the impact of the same on our operations.

Moreover, any material weakness or other deficiencies in our internal control over financial reporting may impede our ability to file timely and accurate reports with the SEC. Any of the above could cause a negative reaction in the financial markets due to a loss of confidence in the reliability of our financial statements.

In addition, we may be required to incur costs in improving our internal control system and the hiring of additional personnel. Any such action could adversely affect our business, results of operations, and financial condition.

If securities and industry analysts do not publish research or publish inaccurate or unfavorable research about our business, then the stock price and trading volume of our Class A common stock could decline.

The trading market for our Class A common stock will depend, in part, on the research and reports that securities and industry analysts publish about us and our business. If securities and industry analysts do not commence or maintain coverage of our company, then the stock price of our Class A common stock would likely be negatively impacted. In the event securities or industry analysts initiate coverage, if one or more of the analysts who cover us downgrade our Class A common stock or publish inaccurate or unfavorable research about our business, then the stock price of our Class A common stock would likely decline. If one or more of these analysts cease coverage of our company or fail to publish reports on us regularly, then demand for our stock could decrease, which might cause the stock price and trading volume of our Class A common stock to decline.

The issuance by us of additional equity securities may dilute your ownership and adversely affect the market price of our Class A common stock.

Our amended and restated certificate of incorporation authorizes us to issue shares of Class A common stock and rights relating to Class A common stock for the consideration and on the terms and conditions established by our board of directors in its sole discretion, whether in connection with acquisitions or otherwise. In addition, under the terms of the Master Transaction Agreement we entered into with Intel in connection with the Mobileye IPO, we granted Intel a continuing right to purchase from us such number of shares of Class A common stock or Class B common stock as is necessary for Intel to maintain an aggregate ownership of our common stock representing at least 80.1% of our common stock outstanding following the Mobileye IPO. Any common stock that we issue, including under our equity incentive plan or in connection with the Master Transaction Agreement, would dilute the percentage ownership of existing stockholders prior to such issuance.

In the future, we may attempt to obtain financing or to further increase our capital resources by issuing additional shares of our Class A common stock or securities convertible into shares of our Class A common stock or by offering debt or other securities. We could also issue shares of our Class A common stock or securities convertible into our Class A common stock or debt or other securities in connection with acquisitions or other strategic transactions. Issuing additional shares of our Class A common stock or securities convertible into shares of our Class A common stock or debt or other securities may dilute the economic and voting rights of our existing stockholders and would likely reduce the market price of our Class A common stock.

Upon liquidation, holders of debt securities and preferred shares, if issued, and lenders with respect to other borrowings would receive a distribution of our distributable assets prior to the holders of our common stock. Debt securities convertible into equity securities could be subject to adjustments in the conversion ratio pursuant to which certain events may increase the number of equity securities issuable upon conversion. Preferred shares, if issued, could have a preference with respect to liquidating distribution or preferences with respect to dividend payments that could limit our ability to pay dividends to the holders of our common stock. Our decision to issue securities in any future offering will depend on market conditions and other factors beyond our control, which may adversely affect the amount, timing, and nature of our future offerings. As a result, holders of our Class A common stock bear the risk that our future offerings may reduce the market price of our Class A common stock and dilute their stockholdings in us.

Delaware law and certain provisions of our amended and restated certificate of incorporation and amended and restated bylaws could make a merger, tender offer, or proxy contest difficult, thereby adversely affecting the market price of our common stock.

Under our amended and restated certificate of incorporation, we opted out of the anti-takeover provisions of Section 203 of the Delaware General Corporation Law (the "DGCL"). If Intel's holdings in our stock are reduced so that Intel no longer maintains at least 15% of the combined voting power of our common stock, then we will no longer opt out of Section 203 of the DGCL, which could discourage, delay, or prevent a change in control by prohibiting us from engaging in a business combination with an interested stockholder for a period of three years after the person becomes an interested stockholder, even if a change of control would be beneficial to our stockholders. In addition, our amended and restated certificate of incorporation and amended and restated bylaws contain provisions that may make the acquisition of our company more difficult, including the following:

- our dual class common stock structure, which provides Intel, as the holder of our Class B common stock, with the ability to significantly influence the outcome of matters requiring stockholder approval, even if they own significantly less than a majority of the shares of our outstanding common stock;
- if Intel's holdings in our stock are reduced so that it no longer maintains a majority of the combined voting power of our common stock, our stockholders will only be able to take action at a meeting of stockholders and not by written consent;
- vacancies on our board of directors will be able to be filled only by our board of directors and not by stockholders, provided, however, that vacancies on our board of directors caused by an action of stockholders may only be filled by a vote of the stockholders until Intel's holdings in our stock are reduced so that it no longer maintains a majority of the combined voting power of our common stock;
- beginning at the first annual meeting of stockholders following any such time that Intel's holdings in our stock no longer represent at least 20% of the aggregate number of shares of our outstanding common stock, our board of directors will be classified into three classes of directors with staggered three-year terms;

[Table of Contents](#)

- beginning at the first annual meeting of stockholders following any such time that Intel's holdings in our stock no longer represent at least 20% of the aggregate number of shares of our outstanding common stock, directors will only be able to be removed from office for cause;
- so long as Intel's holdings in our stock represent at least 20% of the aggregate number of shares of our outstanding common stock, consent by holders of a majority of our Class B common stock will be required for consolidations or mergers;
- no provision in our amended and restated certificate of incorporation or amended and restated bylaws provides for cumulative voting, which limits the ability of minority stockholders to elect director candidates;
- only the Chairman of our Board of Directors, our Chief Executive Officer, or our Secretary upon written request by a majority of our Board of Directors are authorized to call a special meeting of stockholders;
- our amended and restated certificate of incorporation provides that certain litigation against us can only be brought in Delaware unless we otherwise consent;
- nothing in our amended and restated certificate of incorporation precludes future issuances without approval by holders of shares of our Class A common stock of the authorized but unissued shares of our common stock, though approval by holders of a majority of our Class B common stock will be required for such issuances for so long as Intel's holdings in our stock represent at least 20% of the aggregate number of shares of outstanding common stock, subject to certain exclusions;
- our amended and restated certificate of incorporation authorizes undesignated preferred stock, the terms of which may be established and shares of which may be issued, without the approval of the holders of our capital stock; and
- advance notice procedures apply for stockholders to nominate candidates for election as directors or to bring matters before an annual meeting of stockholders.

These anti-takeover defenses could discourage, delay, or prevent a transaction involving a change in control of our company. These provisions could also discourage proxy contests and make it more difficult for stockholders to elect directors of their choosing and to cause us to take other corporate actions they desire, any of which, under certain circumstances, could limit the opportunity for our stockholders to receive a premium for their shares of our Class A common stock, and could also affect the price that some investors are willing to pay for our Class A common stock.

Our amended and restated certificate of incorporation contains exclusive forum provisions for certain claims, which could limit our stockholders' ability to obtain a favorable judicial forum for disputes with us or our directors, officers, or employees.

Our amended and restated certificate of incorporation, to the fullest extent permitted by law, provides that, unless we consent in writing to the selection of an alternative forum, the Court of Chancery of the State of Delaware is the sole and exclusive forum for (1) any derivative action or proceeding brought on behalf of us, (2) any action asserting a claim of breach of a duty (including any fiduciary duty) owed by any of our current or former directors, officers, stockholders, employees or agents to us or our stockholders, (3) any action asserting a claim against us or any of our current or former directors, officers, stockholders, employees or agents arising out of or relating to any provision of the DGCL or our amended and restated certificate of incorporation or our amended and restated bylaws, or (4) any action asserting a claim against us or any of our current or former directors, officers, stockholders, employees or agents governed by the internal affairs doctrine of the State of Delaware. As described below, this provision will not apply to suits brought to enforce any duty or liability created by the Securities Act or Exchange Act, or rules and regulations thereunder.

[Table of Contents](#)

Moreover, Section 22 of the Securities Act creates concurrent jurisdiction for federal and state courts over all claims brought to enforce any duty or liability created by the Securities Act or the rules and regulations thereunder, and our amended and restated certificate of incorporation provides that the federal district courts of the United States will, to the fullest extent permitted by law, be the sole and exclusive forum for resolving any complaint asserting a cause of action arising under the Securities Act. Our decision to adopt such a federal forum provision followed a decision by the Supreme Court of the State of Delaware holding that such provisions are facially valid under Delaware law. While there can be no assurance that federal or state courts will follow the holding of the Delaware Supreme Court or determine that our federal forum provision should be enforced in a particular case, application of our federal forum provision means that suits brought by our stockholders to enforce any duty or liability created by the Securities Act must be brought in federal court and cannot be brought in state court.

Section 27 of the Exchange Act creates exclusive federal jurisdiction over all claims brought to enforce any duty or liability created by the Exchange Act or the rules and regulations thereunder and our amended and restated certificate of incorporation provides that neither the exclusive forum provision nor our federal forum provision applies to suits brought to enforce any duty or liability created by the Exchange Act.

Accordingly, actions by our stockholders to enforce any duty or liability created by the Exchange Act or the rules and regulations thereunder must be brought in federal court. Our stockholders will not be deemed to have waived our compliance with the federal securities laws and the regulations promulgated thereunder.

Any person or entity purchasing or otherwise acquiring or holding any interest in any of our securities shall be deemed to have notice of and consented to our exclusive forum provisions, including the federal forum provision. Additionally, our stockholders cannot waive compliance with the federal securities laws and the rules and regulations thereunder. These provisions may limit our stockholders' ability to bring a claim in a judicial forum they find favorable for disputes with us or our directors, officers, or other employees, which may discourage lawsuits against us and our directors, officers, and other employees and agents. Alternatively, if a court were to find the choice of forum provision contained in our amended and restated certificate of incorporation to be inapplicable or unenforceable in an action, we may incur additional costs associated with resolving such action in other jurisdictions, which could harm our business, operating results, and financial condition.

General Risks

Changes in our effective tax rates may reduce our net income.

A number of factors can increase our effective tax rates, which could reduce our net income, including:

- changes in the volume and mix of profits earned and location of assets across jurisdictions with varying tax rates and the associated impacts of legislative actions affecting multi-national enterprises;
- changes in the valuation of our deferred tax assets and liabilities, and in associated deferred tax asset valuation allowance;
- adjustments to income taxes upon finalization of tax returns;
- increases in expenses not deductible for tax purposes, including equity-based compensation or impairments of goodwill;
- changes in available tax credits;
- changes in our ability to secure new, or renew existing, tax holidays and incentives;
- changes in U.S. federal, state, or foreign tax laws or their interpretation, including changes in the U.S. to the taxation of non-U.S. income and expenses;
- changes resulting from the adoption by countries of OECD recommendations, including adoption of tax legislation to comply with Pillar Two Model Rules, or other legislative actions
- changes in accounting standards; and

- those described under “Risks Related to Operations in Israel — The tax benefits that are available to us under Israeli law require us to meet various conditions and may be terminated or reduced in the future, which could increase our costs and taxes.”

Global or regional conditions can adversely affect our business, results of operations, and financial condition.

We and our suppliers have manufacturing, assembly and testing, research and development, sales and other operations in Israel and several other countries, and some of our business activities are concentrated in one or more geographic areas. Moreover, 82% of our total revenue in 2024 was derived outside of the United States, with China, Germany, and South Korea making up 26%, 16%, and 13% of total revenue respectively, based on the location of the customer to which the product was shipped. As a result, our business, operating results, and financial condition, including our ability to produce, assemble, test, design, develop, or sell products, and the demand for our solutions, are at times adversely affected by a number of global and regional factors outside of our control.

Adverse changes in global or regional economic conditions periodically occur, including recession or slowing growth, changes, or uncertainty in fiscal, monetary, or trade policy, higher interest rates, tighter credit, inflation, lower capital expenditures by businesses including on IT infrastructure, increases in unemployment and lower consumer confidence and spending. Adverse changes in economic conditions can significantly harm demand for our solutions and make it more challenging to forecast our operating results and make business decisions, including regarding prioritization of investments in our business. An economic downturn or increased uncertainty may also lead to increased credit and collectability risks, higher borrowing costs or reduced availability of capital markets, reduced liquidity, adverse impacts on our suppliers, failures of counterparties including financial institutions and insurers, asset impairments and declines in the value of our financial instruments.

We can be adversely affected by other global and regional factors that periodically occur, including:

- geopolitical and security issues, such as armed conflict and civil or military unrest, political instability, human rights concerns and terrorist activity;
- natural disasters, public health issues (such as the COVID-19 pandemic) and other catastrophic events;
- inefficient infrastructure and other disruptions, such as supply chain interruptions and large-scale outages or unreliable provision of services from utilities, transportation, data hosting or telecommunications providers;
- formal or informal imposition of new or revised export, import or doing-business regulations, including trade sanctions, tariffs, and changes in the ability to obtain export licenses, which could be changed without notice;
- government restrictions on, or nationalization of, our operations in any country, or restrictions on our ability to repatriate earnings from a particular country;
- adverse changes relating to government grants, tax credits or other government incentives, including more favorable incentives provided to competitors;
- differing employment practices and labor issues;
- ineffective legal protection of our intellectual property rights in certain countries;
- local business and cultural factors that differ from our current standards and practices;
- continuing uncertainty regarding social, political, immigration and tax and trade policies; and
- fluctuations in the market values of any of our investments, which can be negatively affected by liquidity, credit deterioration or losses, interest rate changes, financial results, political risk, sovereign risk, or other factors.

Catastrophic events can adversely affect our business, results of operations, and financial condition.

Our operations and business, and those of our customers and direct and indirect vendors and suppliers of OEMs, can be disrupted by natural disasters, industrial accidents, public health issues (such as the COVID-19 pandemic), cybersecurity incidents, interruptions of service from utilities, transportation, telecommunications or IT systems providers, production equipment failures or other catastrophic events.

For example, we have at times experienced disruptions in our production processes as a result of power outages, improperly functioning equipment, and disruptions in supply of raw materials or components, including due to cybersecurity incidents affecting our suppliers. Global climate change can result in certain natural disasters occurring more frequently or with greater intensity, such as drought, wildfires, storms, sea-level rise, and flooding. The long-term effects of climate change on the global economy and the IT industry in particular are unclear, but could be severe.

Catastrophic events could make it difficult or impossible to produce or deliver products to our customers, receive production materials from our suppliers or perform critical functions, which could adversely affect our revenue and require significant recovery time and expenditures to resume operations. While we maintain business recovery plans, some of our systems are not fully redundant and we cannot be sure that our plans will fully protect us from such disruptions. Furthermore, even if our operations are unaffected or recover quickly, if our customers or suppliers cannot timely resume their own operations due to a catastrophic event, we may experience reduced or cancelled orders or disruptions to our supply chain that would adversely affect our business, results of operations, and financial condition.

Even though we maintain insurance coverage for a variety of property, casualty, and other risks, not all possible risks are or can be fully covered and therefore any insurance payments to the Company may not necessarily cover the entire scope of the damage and/or all possible losses. We may also decide not to purchase certain policies and/or to self-insure against certain risks. The types and amounts of our insurance coverage vary depending on availability, cost, and decisions with respect to risk retention. We may decide to not purchase certain policies at all for various reasons, including due to the costs of such policy outweighing any economic benefit, and there is no certainty that it will be possible to purchase or renew suitable insurance policies in the future pursuant to reasonable commercial terms, if at all. Some of the policies under which we are covered may have large deductibles and broad exclusions. In addition, one or more insurance providers may be unable or unwilling to pay a claim. Our insurers may also discontinue our insurance coverage and we may be unable to find replacement insurance on acceptable terms or at all, or where we share our limits with Intel claims by Intel under these policies may exhaust the available policy limits.

Losses not covered by insurance may be large, which would adversely affect our business, results of operations, and financial condition.

Item 1B. Unresolved Staff Comments

None.

Item 1C. Cybersecurity

Cybersecurity Risk Management

Cybersecurity risk management is an integral part of our overall enterprise risk management program, which we have continued to invest in developing. Our corporate cybersecurity risk management program provides a framework for handling cybersecurity threats and incidents, including threats and incidents associated with the use of services provided by third-party vendors and service providers, and facilitating coordination across different business units of the Company. Our corporate cybersecurity risk management program is based on and audited against industry standards, including ISO 27001 for Information Security Management Systems (ISMS) and the automotive industry's Trusted Information Security Assessment Exchange standard (TISAX).

[Table of Contents](#)

Our corporate cybersecurity team is responsible for operating our cybersecurity risk management program. The cybersecurity team determines with management an annual workplan for risk assessments, reviews, audits and tests. The cybersecurity team also conducts vulnerability assessments, security reviews and penetration tests on a regular basis in accordance with such workplan. Following risk assessments that require any remediation, the cybersecurity team then conducts a risk treatment and response process, including mitigation, remediation and risk reduction efforts. Our policies also require that Internet-accessible enterprise systems and applications must undergo a penetration test at least annually, and we engage specialized, independent, third parties to conduct penetration tests and specific in-depth reviews of certain enterprise systems and applications.

With respect to overseeing and identifying cybersecurity risks associated with third parties, we seek to impose certain cybersecurity requirements on critical third parties with whom we do business. The cybersecurity team performs risk assessments, due diligence checks and validation of key security controls in accordance with our cybersecurity policies and standards for third-party vendors and service providers with whom we exchange information or integrate our information systems and networks. We include cybersecurity and privacy addenda and clauses in our agreements with such third parties where applicable and seek to pass through any necessary regulatory and contractual requirements to such third parties. When we do become aware that a third-party vendor or service provider has experienced a compromise or failure, we attempt to mitigate our risk, including by terminating such third party's connection to our information systems and networks where appropriate or by exercising any applicable contractual remedies we may have, such as a right to indemnification.

On a semi-annual basis the cybersecurity team conducts a program performance evaluation with management to assess the continuing suitability, adequacy and effectiveness of the Company's cybersecurity risk management program, including with respect to the fulfillment of cybersecurity objectives and compliance with industry standards, and to recommend changes to the Company's threat modeling, priorities for future risk assessments, policy adjustments in response to newly identified risks or non-compliance, and overall risk acceptance.

To foster a culture of cybersecurity awareness within the Company and provide employees with further knowledge of cybersecurity-conscious behavior, all employees of the Company are required to attend cybersecurity training sessions during the onboarding process and at least once per year.

Our organizational cybersecurity program is under the direction of our Chief Information Security Officer ("CISO") who receives reports from our cybersecurity team and oversees the prevention, detection, mitigation, and remediation of cybersecurity threats and incidents. Our CISO reports to our Chief Operating Officer ("COO"), who may discuss cybersecurity risks and other operational risks with other senior management as appropriate. Our CISO and dedicated cybersecurity team personnel are certified and experienced information systems security professionals and cybersecurity managers with many years of experience. Our CISO has served in that position since 2019 and has over 25 years of managerial and professional cybersecurity expertise. He has held the role of CISO and other senior management positions with NDS, Cisco and Deloitte and has also served as cybersecurity consultant for companies in multiple global industries. Our COO has extensive experience in project management and cybersecurity, including from past roles with Verint - Systems and Cisco Systems as well as the establishment and management of the Company's cybersecurity team prior to our CISO joining the Company.

Management is responsible for identifying, considering and assessing material cybersecurity risks on an ongoing basis, establishing processes to ensure that such potential cybersecurity risk exposures are monitored, putting in place appropriate mitigation measures and maintaining cybersecurity programs. The Company's cybersecurity team regularly meets with the COO to report its findings. The COO in turn periodically reports on such matters to the Chief Executive Officer and other members of management.

The COO and CISO provide updates to the audit committee of our board of directors (the "Audit Committee") on the Company's cybersecurity programs, material cybersecurity risks and mitigation strategies. In addition to such regular updates, and as part of our incident response processes, our COO is also responsible for informing the Audit Committee of material cybersecurity threats and incidents, based on management's assessment of risk.

Our board of directors has overall oversight responsibility for our risk management, and delegates cybersecurity risk management oversight to the Audit Committee. The Audit Committee is responsible for ensuring that management has processes in place designed to identify and assess cybersecurity risks to which the Company is exposed and implement processes and programs designed to manage cybersecurity risks and mitigate and remediate cybersecurity threats and incidents. Both management and the Audit Committee also report material cybersecurity risks to our full board of directors, based on management's assessment of risk.

In 2024, we did not identify any cybersecurity risks that have materially affected or are reasonably likely to materially affect our business strategy, results of operations, or financial condition. However, despite our efforts, we cannot eliminate all risks from cybersecurity threats or incidents, or provide assurances that we have not experienced an undetected cybersecurity incident. For more information about these risks, please see “Risk Factors – Risks Related to Privacy, Data, and Cybersecurity” in this Annual Report on Form 10-K.

Item 2. Properties

We own our principal offices at Shlomo Momo HaLevi Street 1, Jerusalem, Israel, totaling approximately 1,377,781 square feet (approximately 128,000 square meters). We also lease office space in Tel Aviv and various other locations in Israel and around the world, including Detroit, Munich, Tokyo, Beijing and Shanghai.

We are working to enter into additional leases for more office space in various locations around the world. In most of the countries we operate in, we lease office space for local operations (local country leadership, customer support, local sales, etc.) and we do not foresee any significant changes to these operations going forward.

We consider our facilities, taken as a whole, to be suitable, adequate, and of sufficient capacity for our current operations.

Item 3. Legal Proceedings

In the ordinary course of conducting our business, we have in the past and may in the future become involved in various legal actions and other claims. We may also become involved in other judicial, regulatory and arbitration proceedings concerning matters arising in connection with the conduct of our businesses. Some of these matters may involve claims of substantial amounts. In addition, from time to time, third parties may assert intellectual property infringement claims against us in the form of letters and other forms of communication. These legal proceedings may be subject to many uncertainties and there can be no assurance of the outcome of any individual proceedings. An adverse outcome in certain of these proceedings could have a material adverse effect on our business, financial condition and results of operations, and could cause the market value of our common stock to decline.

Legal Actions

U.S. Class Action

Securities Litigation. On January 16, 2024, a putative class action captioned *McAuliffe v. Mobileye Global Inc., et al.*, 1:24-CV-00310 (S.D.N.Y.), was filed in the United States District Court for the Southern District of New York against Mobileye and certain of its current and former officers. Following the consolidation of the action with a substantively identical case, *Le v. Mobileye Global Inc., et al.*, 1:24 - CV - 01390 (S.D.N.Y.), and the appointment of a lead plaintiff, an amended complaint was filed on September 13, 2024. In response to the defendants’ motion to dismiss, filed on October 25, 2024, lead plaintiff filed a second amended complaint on November 22, 2024. The second amended complaint asserts violations of Sections 10(b) and 20(a) of the Securities Exchange Act of 1934 in connection with defendants’ alleged misstatements and omissions concerning the build-up of excess inventory by certain Tier 1 Mobileye customers, and seeks unspecified damages and other relief on behalf of all persons and entities who purchased or otherwise acquired Mobileye securities between January 26, 2023 and August 8, 2024. The second amended complaint also includes claims asserted by an additional plaintiff under Sections 11 and 15 of the Securities Act of 1933 on behalf of a putative class of purchasers of Mobileye Class A common stock offered in Mobileye’s June 5, 2023 secondary public offering. Mobileye and the individual defendants filed a motion to dismiss the second amended complaint on December 20, 2024. We intend to defend the matter vigorously. No provision was recorded in the financial statements as of December 28, 2024.

U.S. Derivative Action

On April 12, 2024, a derivative lawsuit was filed against the members of the Mobileye Board of Directors and Intel Corporation, in its capacity as Mobileye’s controlling shareholder. Mobileye was also named as a nominal defendant. The complaint principally asserts claims for breach of fiduciary duty and unjust enrichment based on alleged failures to take steps to prevent the Company from making allegedly false and misleading statements concerning the build-up of excess inventory by certain Tier 1 Mobileye customers. The complaint also asserts a claim for violation of Section 14(a) of the Securities Exchange Act of 1934 based on alleged misstatements and omissions in Mobileye’s 2023 proxy statement. The complaint seeks unspecified damages and other relief. Since May 24, 2024, the derivative action has been stayed by the court pending resolution of the anticipated motion to dismiss in the consolidated securities action.

[Table of Contents](#)

On June 27, 2024, an additional derivative lawsuit was filed in the United States District Court for the Southern District of New York against certain members of the Mobileye Board of Directors, certain of Mobileye’s current and former officers, and Intel Corporation, in its capacity as Mobileye’s controlling shareholder. Mobileye was also named as a nominal defendant. On July 9th, 2024, this derivative action was consolidated with the derivative action originally filed on April 12, 2024 and the consolidated derivative action was stayed by the court pending resolution of the anticipated motion to dismiss in the consolidated securities action. We intend to defend the derivative claims vigorously. No provision for the consolidated derivative action was recorded in the financial statements as of December 28, 2024.

U.S. Patent Litigation

On January 26, 2024, Facet Technology Corp. (“Facet”) sued Mobileye in the U.S. District Court for the Eastern District of Texas for allegedly infringing two patents. Captioned *Facet Technology Corp. v. Mobileye Global, Inc.*, the complaint alleges that certain Mobileye products directly and indirectly infringe both patents. The complaint seeks unspecified damages, a permanent injunction, and attorneys’ fees and costs. We have moved to dismiss the complaint for improper venue and await a ruling. On November 7, 2024, Mobileye Vision Technologies Ltd. and Mobileye Inc., each a wholly-owned indirect subsidiary of Mobileye Global Inc., sued Facet Technology Corp. in the U.S. District Court of Minnesota seeking a declaratory judgement that the Mobileye plaintiffs do not infringe either patent. We intend to defend the matter vigorously. No provision was recorded in the financial statements as of December 28, 2024.

Item 4. Mine Safety Disclosures

Not applicable.

PART II

Item 5. Market for Registrant’s Common Equity, Related Stockholder Matters and Issuer Purchases of Equity Securities

Our Class A common stock is listed on Nasdaq under the symbol “MBLY.” Our Class B common stock is not listed nor traded on any stock exchange.

On January 31, 2025, there was 1 stockholder of record of our Class A common stock and 1 stockholder of record of our Class B common stock. The number of record holders does not include persons who held shares of our Class A common stock in nominee or “street name” accounts through brokers.

Dividend Policy

We intend to retain any future earnings and do not anticipate declaring or paying any cash dividends in the foreseeable future. See “Item 1A. Risk Factors — Risks Related to Ownership of Our Class A Common Stock — We do not expect to pay dividends in the foreseeable future.”

Any declaration and payment of future dividends to holders of our common stock will be at the sole discretion of our board of directors and will depend on many factors, including economic conditions, our financial condition and operating results, our available cash and current and anticipated cash needs, capital requirements, legal, tax and regulatory restrictions, including restrictive covenants may be contained in any of our subsidiaries’ credit facilities, and such other factors as our board of directors may deem relevant.

Under Delaware law, dividends may be payable only out of surplus, which is calculated as our net assets less our liabilities and our capital, or, if we have no surplus, out of our net profits for the fiscal year in which the dividend is declared and/or the preceding fiscal year.

Securities Authorized for Issuance under Equity Compensation Plans

The information required by this item will be filed (and is hereby incorporated by reference) by an amendment hereto or pursuant to a definitive proxy statement pursuant to Regulation 14A that will contain such information.

Performance Graph

The following performance graph shall not be deemed “soliciting material” or to be “filed” with the SEC for purposes of Section 18 of the Exchange Act, or otherwise subject to the liabilities under that Section, and shall not be deemed to be incorporated by reference into any filing of Mobileye under the Securities Act or the Exchange Act.

[Table of Contents](#)

The following graph compares the cumulative total stockholder return on our Class A common stock with the comparable cumulative return of the NASDAQ Composite index and PHLX Semiconductor index. The graph assumes that \$100 was invested in our Class A common stock and in each index on October 26, 2022, the date our Class A common stock began trading on Nasdaq. The comparisons are based on historical data and are not indicative of, nor intended to forecast, the future performance of our Class A common stock.

*\$100 invested at the closing price on the first day of trading on October 26, 2022 of Mobileye Class A common stock and in indices, including reinvestment of dividends.

Unregistered Shares of Equity Securities

Not applicable.

Use of Proceeds

Not applicable.

Issuer Purchases of Equity Securities

None.

Item 6. [Reserved]

Item 7. Management’s Discussion and Analysis of Financial Condition and Results of Operations

The following discussion and analysis of our financial condition and results of operations should be read in conjunction with our consolidated financial statements and related notes included elsewhere in this report. Some of the information contained in this discussion and analysis includes forward-looking statements that involve risks and uncertainties. You should review the sections titled “Cautionary Note Regarding Forward-Looking Statements” and “Risk Factors” included elsewhere in this report for a discussion of forward-looking statements and important factors that could cause actual results to differ materially from the results described in or implied by the forward-looking statements contained in the following discussion and analysis.

Our financial data for periods ending or as of dates prior to the completion of the Mobileye IPO have been derived from the consolidated financial statements and accounting records of Intel using the historical results of operations and the historical basis of assets and liabilities. The financial data herein includes costs of our business, which may not, however, reflect the expenses we would have incurred as a stand-alone company for the periods presented. Following the completion of the Mobileye IPO, the consolidated financial statements include the accounts of the Company and its wholly-owned subsidiaries.

Company Overview

Mobileye is a leader in the development and deployment of ADAS and autonomous driving technologies and solutions. We pioneered ADAS technology more than 20 years ago and have continuously expanded the scope of our ADAS offerings, while leading the evolution to autonomous driving solutions.

Our portfolio of solutions is built upon a comprehensive suite of purpose-built software and hardware technologies designed to provide the capabilities needed to make the future of ADAS and autonomous driving a reality. These technologies can be harnessed to deliver mission-critical capabilities at the edge and in the cloud, advancing the safety of road users, and revolutionizing the driving experience and the movement of people and goods globally.

As of December 28, 2024, our solutions had been installed in approximately 1200 vehicle models (including local country, year, and other vehicle model variations), and our SoCs had been deployed in over 200 million vehicles. We are actively working with more than 50 OEMs worldwide on the implementation of our ADAS solutions. For the year ended December 28, 2024, we shipped approximately 29.0 million of our systems, of which the substantial majority were EyeQ™ SoCs. This represents a decrease from the approximately 37.4 million of our systems that we shipped in 2023 and approximately 33.7 million of our systems that we shipped in 2022, primarily due to a significant drawdown of excess inventory at our Tier 1 customers and a reduction in volumes shipped to China in 2024.

We were founded in Israel in 1999. Our co-founder, Professor Amnon Shashua, is our President and Chief Executive Officer. In 2014, we completed an initial public offering as a foreign private issuer and traded under the symbol MBLY on the New York Stock Exchange. Intel acquired Mobileye for \$15.3 billion in 2017, after which we became a wholly-owned subsidiary of Intel. We completed the Reorganization and Mobileye IPO in October 2022.

Our Business Model

We currently derive substantially all of our revenue from our commercially deployed ADAS solutions, including our Premium ADAS solutions. In the future, propelled by our next generation of EyeQ™ SoCs, including our EyeQ™6 SoC, our Compound AI system architecture, including True Redundancy™, our surround computer vision Mobileye SuperVision™ solution, and our software-defined imaging radars, we believe that we will be positioned to deliver an autonomous driving solution that can enable the mass adoption of AV.

We generate the majority of our revenue from the sale of our EyeQ™ SoCs to OEMs through sales to Tier 1 automotive suppliers. We typically sell our products with volume-based pricing and recognize the revenue and costs associated with our products upon shipment.

We invest significant time and other resources early in the process of new program sourcing as part of our relationship with an OEM. We typically have visibility into the number of models that are expected to include our products at least two to three years in advance based on OEM information provided during the sourcing and nomination process, although there is no contractual commitment by the OEM to purchase particular volumes, and programs are subject to changes with respect to timing and volumes. The revenue that we may recognize in any given year is attributable to program design wins in previous years.

We partner with STMicroelectronics, a leading supplier and innovator of semiconductor devices for automotive applications, in manufacturing, design, and research and development. We have co-developed six generations of our automotive grade SoC, EyeQ™, with STMicroelectronics including EyeQ™5 and EyeQ™6. We have also established relationships with several suppliers, such as Quanta Computer, to develop and assemble our ECUs, including the design for our Mobileye SuperVision™, which includes our EyeQ™5 and EyeQ™6 SoCs manufactured by STMicroelectronics.

Our close partnership with Intel exists on multiple fronts. As a result of our relationship with Intel, we have access to unique and differentiating technologies. For example, we may license certain technologies from Intel that support the design and development of our software-defined imaging radar, including Intel's mmWave technologies. Additionally, we intend to explore a collaboration with Intel on a technology platform to integrate our EyeQ™ SoC with Intel's market leading central compute capability, with plans to utilize Intel Foundry Services' advanced packaging capabilities. This potential platform is intended to enable functions essential to safety, entertainment, and cloud connectivity. Intel's strength in government affairs and policy development around the world will continue to be of significant value to us as we collaborate with regulators who are preparing frameworks to enable commercial deployment of AVs.

Key Factors Affecting Our Performance

We believe there are several important factors that have affected and that we expect to continue to affect our results of operations:

Global demand for automotive vehicles. Our business performance is related to global automotive sales and automotive vehicle production by our OEM customers. Economic conditions in North America, Europe and Asia can have a large impact on the production volume of new vehicles, and, accordingly, have an impact on our revenue. Our OEM customers' production can vary from period to period due to global demand, market conditions and competitive conditions, geopolitical issues including trade restrictions and tariffs, as well as other factors. For example, towards the end of the first half of 2024, global automotive production forecasts weakened, which disproportionately impacted our core customers, primarily due to their continued market share losses in China. We cannot be certain of the severity and length of the continued volatility in the global automotive market, including macro factors impacting our sales to OEMs in China, and the extent of the adverse effect that such volatility could have on our results of operations, financial condition and business in the long term. While automotive production has now recovered to approximately 2019 levels, current uncertain economic conditions inflation may contribute to a reduction in consumer demand. In addition to economic conditions, in prior periods, including during the supply chain crisis and semi-conductor shortage of 2021 and 2022, certain Tier 1 customers increased their orders for components and parts, including our solutions, to counteract the impact of supply chain shortages for auto parts. As a result, some demand for our solutions and the corresponding revenue from these customers were shifted to earlier time periods than otherwise would have occurred absent a general supply chain shortage and inflationary environment. As a result of our standard planning process for 2024, including discussions with our Tier 1 customers, we became aware in late 2023 of significant excess inventory at our customers. This as well as lower than expected production at certain OEMs during 2023 led to the decision by our Tier 1 customers to prioritize in the first quarter of 2024 the utilization of excess inventory on hand before using new shipments to meet the demand of OEMs. We estimate our customers used the vast majority of this excess customer inventory in 2024 in accordance with our expectations, but there is no guarantee that orders will remain normalized or that our customers won't build up excess inventory in the future. ADAS volumes have grown faster in recent years than the overall automotive market as ADAS penetration rates have increased, and we believe that we will continue to benefit from that trend. Our revenue of \$1,654 million for the year ended December 28, 2024 was down 20% year-over-year, primarily due to the aforementioned utilization of excess inventory by our customers during the first half of 2024 and a reduction in volumes shipped to China OEMs in 2024. Continued or future constraints on global automotive production resulting from the effects of economic uncertainty, both global and in specific markets in which we operate, may be a limiting factor on our ability to increase revenue. We expect to continue to capitalize on our strong and collaborative relationships with OEMs and Tier 1s to expand our presence in key markets and capture the long-term growth opportunities in those markets.

Design wins with new and existing customers. Global OEMs are continuously looking for innovative ways to improve the customer appeal and safety of their vehicles. Additional program design wins for production programs are important to our future revenue growth. However, the revenue generated by each design win and the time necessary to achieve a design win can vary significantly. To achieve program design wins, we must maintain our technological leadership and continue to deliver differentiated solutions versus our competition, including in-house technologies developed by our customers, through investment in research and development. Together with Tier 1 automotive suppliers, we work closely with OEMs to understand their solution requirements and have built close long-term relationships with them extending across multiple generations of EyeQ™ products, though there is no guarantee that our customers will purchase our solutions in any certain quantity or at any certain price even after we achieve design wins. For example, in the third quarter of 2024 Zeekr announced their decision to utilize their in-house system instead of SuperVision™ for at least a major portion of product for their 001 model going forward.

Investment in technology leadership and product development. We believe our ability to continue to develop and design highly advanced and cost-efficient ADAS and AV solutions will position us to extend our technology leadership and encourage greater adoption of our solutions by enabling greater levels of autonomy. We also believe that our roadmap for future generations of EyeQ™ SoCs and advanced systems will ultimately power autonomous driving solutions. The EyeQ™ family design further enables scalable ECU architectures, from supporting a variety of ADAS solution architectures to hosting the full workload of autonomous driving, while meeting stringent cost and power efficiency requirements. We expect that our development of software-defined imaging radar will provide a significant cost advantage by eliminating the need for multiple high-cost lidars around the vehicle and require only a single front-facing lidar, significantly lowering the overall cost of the required sensors compared to solutions that use lidar centric or lidar-only systems.

Regulation for ADAS and autonomous driving solutions. Demand for our solutions is influenced by the impact of regulation and the ratings systems deployed by the various NCAPs, particularly the Euro NCAP and the U.S. NCAP, administered by the National Highway Traffic Safety Administration. As these NCAPs demand more ADAS applications such as automatic emergency braking, OEMs will increasingly include ADAS as a standard feature in their models to maintain or to achieve the highest safety ratings. In many countries, these safety assessments have created a “market for safety” as car manufacturers seek to demonstrate that their models satisfy the NCAPs’ highest ratings. We expect national NCAPs to continue to add specific ADAS applications to their evaluation items over the next several years, led by the Euro NCAP. In recent years, as regulatory requirements and NCAP ratings have increased, OEMs have also begun to highlight their safety features as a competitive advantage. As additional regulations are implemented around the world, we expect this to lead to increased global adoption of ADAS, and we believe that we are well positioned to benefit from such increasing safety regulations globally, particularly due to the verifiable nature of our current and future solutions.

Fully autonomous vehicles are still nascent, and regulation of autonomous driving is evolving globally on both a local and national level. We believe that regulatory bodies will demand that AV undergo certain validation and audit requirements before autonomous driving is permitted. The potential impact of regulatory requirements and initiatives on the timing for widespread adoption of fully autonomous driving and on the cost of developing and introducing autonomous driving solutions is uncertain. RSS is our framework that informs our driving policy and formalizes a driving safety concept. Our RSS framework and decision-making engine have inspired a global standardization effort of AV safety including IEEE 2846, which is an industry working group that we lead. We are actively engaged in AV regulations globally as they have implications for the pace at which autonomous driving technologies may be deployed as well as which AV technology validation and audit requirements must be met. Importantly, we believe RSS, which is a pragmatic method that is architected to deliver a provably acceptable level of risk defined by governments, will facilitate standardization efforts worldwide as AV deployments accelerate. In addition to impacting the pace at which autonomous driving technologies are deployed, we expect regulations to impact our financial performance on an ongoing basis over time once autonomous driving gains market adoption. We cannot provide any assurance how any such regulations will impact us and the extent of such impact, particularly if autonomous driving is prohibited in certain areas.

Consumer adoption of our ADAS and autonomous driving solutions. Our financial performance is in part driven by public awareness and demand for ADAS solutions. Over time we expect autonomous driving solutions to contribute meaningfully to our revenue growth. As a result, consumers’ demand for, and willingness to adopt, ADAS and autonomous driving technologies will significantly impact our financial performance. We believe that our leadership position in ADAS positions us to continue to set the standard for advanced autonomous solutions and will help us benefit from increasing consumer confidence in and demand for autonomous technology over time.

Solution mix, pricing, and product costs. Solution mix is among the most important factors affecting our revenue and gross margin, as our prices vary significantly across our solutions. The price of our solutions depends on the bundle of applications that are included in the specific product. Our solutions have different margin profiles. As we develop, bundle, and sell full systems that include third-party hardware beyond EyeQ™ SoCs, we expect that our gross margin will decrease on a percentage basis because of the greater third-party hardware content. However, as a result of a higher expected selling price for such systems, we expect our gross profit per unit will increase on a dollar basis.

ASP varies based on a solution's applications and complexity. As a particular solution matures and unit volumes increase, we expect its ASP to decline. In addition, there are generally step-downs in pricing over periods of production as volumes ramp up. While individual solution ASPs may decline, we seek to continually offer new features and functionality and increase the value that our solutions offer to OEM customers as we target new design win opportunities, manage the life cycles of existing solutions and create new ADAS categories with advanced features. We also are currently delivering full system solutions consisting of higher-function products such as SuperVision™ which carry significantly higher prices as compared to our single EyeQ™ SoC and cloud-enhanced ADAS products. We believe our differentiated and scalable solutions consistently enhanced by additional features can enable us to maintain or increase overall ASPs over time, as SuperVision™ and other advanced solutions become a larger portion of our product mix.

The cost of input materials and manufacturing costs are significant factors affecting our gross margin. Material costs are affected by a variety of factors, including the availability of sufficient supply to meet market demand. For example, in late 2021, semiconductor fabrication costs increased as a result of a global supply shortage that began in 2020. We experienced increases in input costs in 2022 and 2023 as a result of supply chain shortages, including the global semiconductor shortage, and inflationary pressures. While we were largely successful in increasing our ASPs to reflect these cost increases, we experienced a reduction in percentage gross margin as a result of these cost increases. Our gross margin has been and may continue to be affected by our ability to offset these and any future cost increases through realizing pricing increases on our solutions and achieving decreases in other production costs. We work closely with STMicroelectronics, Quanta Computer and other suppliers on a continuous basis to manage material costs, increase yields and improve manufacturing, assembly, and test costs.

Supply and manufacturing capacity. Our solutions are dependent on the global semiconductor supply chain. The continued and timely supply of input materials, the availability of manufacturing capacity, and packaging and testing services at reasonable prices impact our ability to meet customer demand. Supply chain disruptions, shortages of raw material, such as wafers and substrates, and manufacturing limitations could limit our ability to meet customer demand and result in delayed, reduced, or canceled orders. During 2021 and 2022, the semiconductor industry experienced widespread shortages of substrates and other components and available foundry manufacturing capacity. We entered 2022 with significantly lower inventories of our EyeQ™ SoCs on our balance sheet as a result of the limited supply during 2021. Further, STMicroelectronics, our sole supplier of EyeQ™ SoCs, was not able to meet our demand for EyeQ™ SoCs during 2022, causing a further significant reduction in our company-owned inventory level. Starting in late 2022 and early 2023, such supply chain disruptions, raw material shortages and manufacturing limitations abated and during 2023, we successfully increased levels of EyeQ™ SoC inventory on hand, mitigating the potential for future supply constraints to cause a shortfall of chips. However, in the event of a reoccurrence of supply chain constraints, and subject to the duration and severity thereof, we may be required to operate with minimal or no inventory of EyeQ™ SoCs or SuperVision™ ECUs on hand. As a result, we are substantially reliant on timely shipments of EyeQ™ SoCs from STMicroelectronics and ECUs from Quanta Computer (or other suppliers) to fulfill customer orders and if such a shortfall of chips or ECUs were to occur, we may be unable to offset future supply constraints through the use of inventory on hand. Our reliance on single or limited suppliers and vendors for certain components, equipment, and services and the aforementioned shortages of substrates and other components have led to increased supply chain risks and continue to stress our ability to meet the supply demands of our customers. To mitigate these supply chain constraints, management continues to monitor inventory levels on an ongoing basis. Although we cannot fully predict the length and the severity of the impact these pressures will have on a long-term basis, we do not anticipate that our current supply chain constraints would materially adversely affect our results of operations, capital resources, sales, profits, and liquidity on a long-term basis.

Public company expenses. As a recently public company, we have implemented and will continue to implement additional procedures and processes for the purpose of addressing the standards and requirements applicable to public companies. In particular, we expect our accounting, legal and personnel-related expenses to increase as we continue to establish more comprehensive compliance and governance functions and hire additional personnel to support such functions, maintain and review internal controls over financial reporting in accordance with the Sarbanes-Oxley Act, and prepare and distribute periodic reports in accordance with SEC rules. Our financial statements will reflect the impact of these expenses. We also expect the costs of our insurance, including directors' and officers' insurance and insurance coverage for AV activity, to increase as a result of higher premiums.

In addition, in connection with the Mobileye IPO, we established an equity incentive plan for purposes of granting share-based compensation awards to certain members of our senior management, to our non-employee directors and to employees, to incentivize their performance and align their interests with ours. Historically, grants of share-based compensation to our employees were made pursuant to Intel's employee equity incentive plans, and such historical grants will continue based on their original vesting schedules. Equity compensation has been, and will continue to be, an important part of our future compensation strategy and a significant component of our future expenses, which we expect to increase over time.

Intel Segment Reporting

Certain of our financial results are presented as an operating segment within Intel's publicly reported financial results. The financial results for us reported by Intel in its segment reporting may differ from our standalone financial results primarily due to Intel's reporting of expenses related to certain corporate overhead functions and differences in the materiality thresholds applied to prepare consolidated financial results for Intel and for Mobileye on a standalone basis.

Components of Results of Operations

Revenue

We currently derive substantially all of our revenue from our commercially deployed ADAS solutions including our Premium ADAS solutions. We generate the majority of our revenue from the sale of our EyeQ™ SoCs to OEMs primarily through sales to Tier 1 automotive suppliers that implement our product into vehicles, in which case our direct customer is the Tier 1 automotive supplier that is responsible for paying us for our products. Because of the complex nature of our products and the need to customize and validate a product and to integrate it into the OEM's overall ADAS system, we also have strong direct relationships with the OEMs.

EyeQ™ SoC sales represented approximately 86% and 89% of our revenue for the years 2024 and 2023, respectively. Sales of our SuperVision™ product represented the majority of the remainder of our revenue for both 2024 and 2023. Revenue from the sale of our EyeQ™ products and SuperVision™ products is recognized at the time of product shipment from our facilities, as determined by the agreed-upon shipping terms. Our sales to any single Tier 1 automotive supplier typically cover more than one OEM and more than one production program from any OEM.

Cost of Revenue

Cost of revenue consists primarily of expenses associated with the manufacturing cost of our EyeQ™ SoCs and our SuperVision™ product, and amortization of acquired intangible assets, identified as developed technology. Additional costs are royalty fees for the intellectual property that is included in the EyeQ™ SoC, personnel-related expenses, logistics and insurance costs and allocated overhead costs. As we develop and sell full systems that include hardware beyond EyeQ™ SoCs, we expect that our gross margin will decrease over time because of the greater hardware content included in our solutions. However, as a result of a higher expected selling price for such systems, we expect our gross profit per unit will increase on a dollar basis in future periods.

Research and Development Expenses, net

Research and development expenses primarily consist of expenses associated with personnel related expenses, facilities, equipment and supplies for research and development activities, materials, parts and other prototype development, cloud computing services, consulting and other professional services, quality assurance within the development programs, and allocated overhead costs.

We enter into best-efforts nonrefundable non-recurring engineering ("NRE") arrangements pursuant to which we are reimbursed for a portion of the research and development expenses attributable to specific development programs. We do not receive any additional compensation or royalties upon completion of such projects and the potential customer does not commit to purchase the resulting product in the future. The participation reimbursement that we receive does not depend on whether there are future benefits from the project. All intellectual property generated from these arrangements are exclusively owned by us.

We intend to continue our significant investment in research and development activities to attain our strategic objectives. Accordingly, we expect research and development expenses to increase in absolute dollars, but to gradually decrease as a percentage of total revenue. The expected increase is mainly due to additional research and development headcount and higher direct expenses that we expect to incur in connection with the development of our new EyeQ™ SoC generations, Premium Driver-Assist offerings and the investment in software and hardware infrastructure for our AV solutions and active sensor suite.

Sales and Marketing Expenses

Sales and marketing expenses consist primarily of expenses associated with the amortization of acquired intangible assets, comprised of customer relationships and brands, personnel-related expenses, including share-based compensation of our sales force, as well as marketing expenses and allocated overhead costs.

We expect to increase our sales and marketing expenses over time, as we continue our efforts to increase market awareness of the benefits of our solutions, but we expect sales and marketing expenses to decrease as a percentage of total revenue as our business grows.

General and Administrative Expenses

General and administrative expenses consist of personnel-related expenses, including share-based compensation of our executive, insurance costs, expenses associated with finance and legal departments, including legal and accounting fees, litigation expenses, and fees for professional and contract services.

We expect our general and administrative expenses to moderately increase in absolute dollars but to decrease as a percentage of total revenue as our business grows. The expected increase is mainly associated with the costs related to being a public company, including the need to hire more personnel to support compliance with SEC rules and regulations and the applicable provisions of the Sarbanes-Oxley Act, as well as increased premiums for directors' and officers' insurance and the increased use of share-based compensation for general and administrative personnel.

Goodwill Impairment

Goodwill impairment expenses consist of a non-cash impairment loss recognized for the goodwill of the "Mobileye" reporting unit in the year ended December 28, 2024, as a result of the impairment analysis the Company performed during the third quarter of 2024.

Interest Income (Expense) with related party, net and Other Financial Income (Expense), net

On April 21, 2022, we and Intel entered into a loan agreement whereby we issued a promissory note to Intel in an aggregate principal amount of \$3.5 billion (the "Dividend Note"). The Dividend Note accrues interest at a rate equal to 1.26% per annum. In November 2022, we used approximately \$0.9 billion out of the net proceeds of the Mobileye IPO to repay a portion of the indebtedness under the Dividend Note and Intel contributed to Mobileye the remaining portion of the Dividend Note (plus related accrued interest) such that no amounts under the Dividend Note remain owed by us to Intel.

In the years ended December 28, 2024 and December 30, 2023, we had no interest income (expense) with related party since the outstanding balance of both the Dividend Note and a loan to Intel were zero as of December 31, 2022. In the year ended December 31, 2022, we incurred a net interest expense with related party of \$(6) million which mainly relates to accrued interest on the Dividend Note to Intel.

Other financial income (expense), net, consists primarily of income related to investments in money market funds, as well as income from short term deposits, fair value revaluation of equity investments and fluctuations in value due to foreign exchange differences between our monetary assets and liabilities denominated in New Israeli Shekels and to a much lesser extent, the Euro, the Chinese Yuan, the Japanese Yen, and other currencies.

Benefit (provision) for income taxes

Benefit (provision) for income taxes consists primarily of income taxes related to the United States, Israel and other foreign jurisdictions in which we conduct business. We also have incurred deferred tax liabilities with respect to tax amortization of certain acquired intangible assets. We are eligible for certain tax benefits in Israel under the Investment Law, at a reduced tax rate, subject to specified terms. In addition, the OECD announced an Inclusive Framework on Base Erosion and Profit Shifting including Pillar Two Model Rules defining the global minimum tax in 2021, which calls for the taxation of large multinational corporations at a minimum rate of 15%. Subsequently, multiple sets of administrative guidance have been issued. Many non-US tax jurisdictions have either recently enacted legislation to adopt certain components of the Pillar Two Model Rules beginning in 2024 (including the European Union Member States), with the adoption of additional components in later years, or announced their plans to enact legislation in future years. We are continuing to evaluate the impacts of enacted legislation and pending legislation to enact Pillar Two Model Rules in the non-US tax jurisdictions in which we operate.

During the years presented in our consolidated financial statements, certain components of our business operations were included in the consolidated U.S. tax return filed by Intel. We also file certain foreign income tax returns on a separate basis, distinct from Intel. The income tax provision included in our consolidated financial statements has been calculated using the separate return method as if we had filed our own tax returns. We present tax loss and tax credit carry-forward amounts that have not been utilized by Intel only to the extent such tax attributes can be claimed as a benefit consistent with our separate tax return method approach. The use of the separate return method may result in differences between our income tax provision compared to Intel's consolidated income tax provision.

In 2021, Mobileye's Israeli operations became taxable in the United States as a branch entity. In 2022, Moovit's Israeli operations became taxable in the United States as a branch entity. As a result, these operations are taxed both in the United States and Israel. For U.S. tax purposes, there are favorable future tax deductions that we have not benefited due to a valuation allowance position. If warranted, based on the assessment of verifiable evidence in support of the realization of deferred tax assets, the valuation allowances may be released, resulting in a tax benefit.

Realization of deferred tax assets is based on our judgment and various factors including reversal of deferred tax liabilities, the ability to generate future taxable income in jurisdictions where such assets have arisen, and potential tax planning strategies. The valuation allowance for the years presented in our consolidated financial statements primarily relates to U.S. branch deferred tax assets not currently expected to be realized given that we have sustained recent losses based on the separate return method.

Certain net operating losses and tax credit carry-forward tax attributes generated by the Company that have been utilized as part of Intel's consolidated income tax return filings, but have not been utilized by the Company under the separate return method approach, have been reflected in the consolidated financial statements because the Company will recognize a benefit based on the separate return method when determined to be realizable.

Results of Operations

The following table sets forth our results of operations in dollars and as a percentage of revenue for the periods indicated:

U.S. dollars in millions	Year Ended					
	December 28, 2024		December 30, 2023		December 31, 2022	
	Amount	% of Revenue	Amount	% of Revenue	Amount	% of Revenue
Revenue	\$ 1,654	100 %	\$ 2,079	100 %	\$ 1,869	100 %
Cost of revenue	913	55 %	1,032	50 %	947	51 %
Gross profit	741	45 %	1,047	50 %	922	49 %
Operating expenses:						
Research and development, net	1,083	65 %	889	43 %	789	42 %
Sales and marketing	118	7 %	118	6 %	120	6 %
General and administrative	70	4 %	73	4 %	50	3 %
Goodwill impairment	2,695	163 %	—	— %	—	— %
Total operating expenses	3,966	240 %	1,080	52 %	959	51 %
Operating income (loss)	\$ (3,225)	(195)%	\$ (33)	(2)%	\$ (37)	(2)%
Interest income (expense) with related party, net and other financial income (expense), net	62	4 %	49	2 %	5	— %
Income (loss) before income taxes	(3,163)	(191)%	16	1 %	(32)	(2)%
Benefit (provision) for income taxes	73	4 %	(43)	(2)%	(50)	(3)%
Net income (loss)	\$ (3,090)	(187)%	\$ (27)	(1)%	\$ (82)	(4)%

(1) Includes amortization of acquired intangible assets, as follows:

U.S. dollars in millions	Year Ended		
	December 28, 2024	December 30, 2023	December 31, 2022
Cost of revenue	\$ 376	\$ 406	\$ 469
Sales and marketing	68	68	75
Total amortization of acquired intangible assets	\$ 444	\$ 474	\$ 544

(2) Includes share-based compensation expense, as follows:

U.S. dollars in millions	Year Ended		
	December 28, 2024	December 30, 2023	December 31, 2022
Cost of revenue	\$ 2	\$ 2	\$ 2
Research and development, net	244	212	153
Sales and marketing	6	7	5
General and administrative	27	31	14
Total share-based compensation	\$ 279	\$ 252	\$ 174

Comparison of the years ended December 28, 2024 and December 30, 2023

Revenue

In 2024, revenue was \$1,654 million, down \$425 million, or 20%, compared to 2023. This decrease in revenue was primarily due to a decrease of \$438 million, or 24%, in EyeQ™ SoC revenue attributable mainly to a 23% decrease in volume, which was primarily related to the previously disclosed meaningful build-up of inventory at our Tier 1 customers, including in the fourth quarter of 2023. The vast majority of this excess inventory was consumed to satisfy demand in the first half of 2024. This was offset by a slight increase in SuperVision™ related revenue.

Cost of Revenue

In 2024, our cost of revenue decreased by \$119 million, or 12%, compared to 2023. This decrease was primarily due to a decrease of \$87 million in manufacturing costs relating primarily due to the decrease in sales of our EyeQ™ SoC, in addition to a \$30 million decrease in amortization expenses of intangible assets.

Gross Profit and margin

In 2024, our gross profit decreased by \$306 million, or 29%, compared to 2023. The decrease was mainly due to the decrease in revenue from our EyeQ™ SoC sales, partially offset by the decrease in amortization expenses of intangible assets.

Our gross margin decreased from 50% during 2023, to 45% during 2024. This decrease was mainly due to a higher impact of amortization of intangible assets as a percentage of revenues, as well as the impact of higher EyeQ-related costs per unit due to mix effects.

Research and Development Expenses, net

Research and development expenses, net, in 2024, increased by \$194 million, or 22%, compared to 2023. This increase was primarily due to an increase in payroll and related expenses, resulting from an increase in average research and development headcount of 348 employees, and an increase in share-based compensation, which was partially offset by military duty reserve refunds from the state of Israel. In addition, there was an increase related to investments attributable to new product development and also an increase in depreciation costs associated with the new campus and additional sites.

Sales and Marketing Expenses

Sales and marketing expenses in 2024 remained flat compared to 2023, mainly due to an increase in marketing expenses which was offset by a decrease in payroll and related expenses including share-based compensation which is mainly associated to the winding down of the Aftermarket Solutions Unit in 2024.

General and Administrative Expenses

General and administrative expenses in 2024 decreased by \$3 million, or 4%, compared to 2023. This decrease was mainly due to a decrease in legal and corporate expenses.

Goodwill Impairment

Goodwill impairment expenses were \$2,695 million in 2024 and zero in 2023. During the third quarter of 2024, the Company performed an interim quantitative goodwill impairment analysis for the “Mobileye” reporting unit, resulting in a non-cash impairment loss. For further details, refer to Note 10 to the Consolidated Financial Statements included in this report.

Interest Income (expense) with Related Party, net and Other Financial Income (expense), net

Interest income (expense) with related party, net was zero in both 2024 and 2023.

Other financial income (expense) net in 2024, was \$62 million compared to \$49 million in 2023. This increase was mainly due to an increase in interest earned on short term bank deposits, a decrease in exchange rate differences expense and income from fair value revaluation of equity investments executed during 2024.

Benefit (Provision) for Income Tax

In 2024, benefit for income tax was \$73 million, compared to a \$(43) million provision for income tax in 2023. This change is mainly due to the deferred tax effects of goodwill impairment to the Mobileye reporting unit, as well as higher loss before income taxes in 2024.

Comparison of the years ended December 30, 2023 and December 31, 2022

Revenue

In 2023, revenue was \$2,079 million, up \$210 million, or 11%, compared to 2022. This increase in revenue was primarily due to an increase of \$189 million, or 11%, in EyeQ™ SoC revenue, attributable to an 11% increase in volume, with ASP remaining consistent with prior year, some increase in SuperVision™ sales and initial sales of self-driving systems.

Cost of revenue

In 2023, our cost of revenue increased by \$85 million, or 9%, compared to 2022. This increase was primarily due to an increase of \$138 million in manufacturing costs relating primarily to increased sales of our EyeQ™ SoC and our sales of SuperVision™ solution, offset by \$63 million decrease in amortization expenses of intangible assets.

Gross Profit and margin

In 2023, our gross profit increased by \$125 million, or 14%, compared to 2022. The increase was mainly driven by the increase in revenue from our EyeQ™ SoC sales, as well as the decrease in amortization expenses of intangible assets.

Our gross margin increased from 49% during 2022, to 50% during 2023. This increase was mainly due to lower cost attributable to amortization of intangible assets as a percentage of revenues, which was partially offset by the downward impact of the increased cost of our EyeQ™ SOC (which was passed through as a price increase to our customers on a zero-margin basis).

Research and Development Expenses, Net

Research and development expenses, net, in 2023, increased by \$100 million, or 13%, compared to 2022. This increase was primarily due to an increase of \$59 million in share-based compensation expenses, an increase of \$44 million in cloud computing services and investments attributable to new product development offset by \$31 million of higher NRE reimbursements in 2023 and an increase of \$32 million in facilities and related expenses due to the occupancy of new sites. Average research and development headcount increased by 367 employees, however the related payroll expenses were mainly offset by ILS/USD foreign exchange rate impact and military duty reserve refunds from the state of Israel.

Sales and Marketing Expenses

Sales and marketing expenses in 2023 decreased by \$2 million, or 2%, compared to 2022. The decrease was mainly due to a decrease in amortization expenses of intangible assets, partially offset by an increase in marketing expenses.

General and Administrative Expenses

General and administrative expenses in 2023 increased by \$23 million, or 46%, compared to 2022. This increase was mainly due to an increase of \$17 million in share-based compensation, as well as costs related to being a public company.

Interest Income (Expenses) with related party, net and Other Financial Income (expense), net

Interest income (expense) with related party, net in 2023 was \$0 million compared \$(6) million in 2022. The decrease was due to zero outstanding balances of both the Dividend Note and the loans to Intel as of December 31, 2022.

Other financial income (expense), net in 2023, was \$49 million compared to \$11 million in 2022. This increase was mainly due to interest earned on investment in money market funds.

Benefit (provision) for income tax

In 2023, provision for income tax decreased by \$7 million, compared to 2022. This decrease was driven by withholding tax expense of \$14 million related to a dividend distribution between entities within the Mobileye Group in 2022, which was partially offset by an increase in tax expense related to changes in jurisdictional composition of our taxable income based on operational results and recognition of uncertain tax positions in 2023.

Liquidity and Capital Resources

We believe we have sufficient sources of funding to meet our business requirements and plans for the next 12 months and in the longer term. Cash generated by operations is our primary source of liquidity for funding our strategic business requirements.

Our primary uses of funds have been for funding increases in headcount in our research and development departments, investments attributable to new product development, as well as for funding our capital expenditures. Our capital expenditures have related mainly to data storage and other computer related equipment, expenditure related to research and development projects and to the construction of new sites and were \$81 million and \$98 million for 2024 and 2023, respectively.

To fund our cash requirements in the ordinary course of business, we anticipate that we will continue to primarily rely on operating cash flows, supplemented by our total cash and cash equivalents. We expect our total capital expenditures for 2025 to be higher compared to our total capital expenditures in 2024. We continue to invest in equipment related to the development of our next generation products. Our future capital requirements will depend on many factors, including our growth rate and the timing and extent of operating expenses.

We have lease obligations and other contractual obligations and commitments as part of our ordinary course of business. We did not have during the periods presented, and we do not currently have, any off-balance sheet arrangements involving commitments or obligations, including contingent obligations, arising from arrangements with unconsolidated entities or persons that have or are reasonably likely to have a material current or future effect on our financial condition, results of operations, liquidity, cash requirements or capital resources.

Cash Flows

The following table sets forth certain consolidated statements of cash flow data:

U.S. dollars in millions	Year Ended		
	December 28, 2024	December 30, 2023	December 31, 2022
Net cash provided by operating activities	\$ 400	\$ 394	\$ 546
Net cash provided by (used in) investing activities	(120)	(98)	1,187
Net cash provided by (used in) financing activities	(66)	(100)	(1,317)
Effect of foreign exchange rate changes on cash and cash equivalents	(2)	(5)	(6)
Increase in cash, cash equivalents and restricted cash	\$ 212	\$ 191	\$ 410

Operating activities

For 2024 compared to 2023, the \$6 million increase in cash provided by operating activities was mainly due to a lower increase in inventories compared to prior year period during which the company rebuilt its strategic inventory of EyeQ chips and a decrease in accounts receivable due to reduction in revenue. This was mostly offset by an increase of \$3,063 million in net loss, which was adjusted by \$2,695 million of non-cash goodwill impairment loss.

For 2023 compared to 2022, the \$152 million decrease in cash provided by operating activities was mainly due to an increase in inventories, as part of a planned initiative to rebuild our strategic inventory of EyeQ chips that was largely consumed during the supply chain crisis in 2021 and 2022, which was partially offset by a change in employee related balances.

Investing activities

Net cash used in investing activities in 2024 was \$120 million, consisting mostly of capital expenditures and purchases of debt and equity investments.

Net cash used in investing activities in 2023 was \$98 million, consisting of capital expenditures in connection with the construction of our campus and electronic equipment.

Net cash provided by investing activities in 2022 was \$1,187 million, consisting primarily of \$1,299 million net repayment of a loan by Intel, partially offset by capital expenditures.

Financing activities

Net cash used in financing activities in 2024 and 2023 was \$66 million and \$100 million, respectively, consisting of share-based compensation recharge payments made to Intel.

Net cash used in financing activities in 2022 was \$1,317 million, consisting primarily of \$900 million legal purchase of Moovit and \$918 million repayment of the Dividend Note, as well as \$280 million of share-based compensation recharge payments made to Intel and the \$337 million dividend to Intel, partially offset by \$1,034 million in net proceeds from the Mobileye IPO.

Liability in respect of employee rights upon retirement

Israeli labor laws and agreements require severance payments upon dismissal of an employee or upon termination of employment in other circumstances. The severance pay liability with respect to Israeli employees is calculated pursuant to Israeli Severance Pay Law based on the most recent salary of the employees multiplied by the number of years of employment as of the balance sheet date.

Our liability for all of our Israeli employees is covered by monthly deposits with severance pay funds. The value of the deposited funds is based on the cash surrender value of these policies and includes profits (or loss) accumulated through the balance sheet date. The deposited funds may be withdrawn only upon the fulfillment of the obligations pursuant to Israeli Severance Pay Law or labor agreements.

The majority of our liability for severance pay is covered by the provisions of Section 14 of the Israeli Severance Pay Law ("Section 14"). Under Section 14 employees are entitled to monthly deposits, at a rate of 8.33% of their monthly salary, contributed by us on their behalf to their insurance funds. Payments in accordance with Section 14 release us from any future severance payments in respect of those employees. As a result, we do not recognize any liability for severance pay due to these employees and the deposits under Section 14 are not recorded as assets on the consolidated balance sheets.

Severance pay liability increased from \$56 million as of December 30, 2023, to \$62 million and as of December 28, 2024, reflecting mainly the impact of annual salary increases.

Lease liabilities

We have lease agreements for vehicles and offices. We lease office space in various locations in Israel and around the world including USA, Germany and China. All leases are operating leases with fixed payment terms where some of the leases include annual increases to lease payments based on an index or a rate. Lease liabilities, representing the present value of future lease payments, have decreased from \$51 million as of December 30, 2023 to \$50 million as of December 28, 2024, reflecting mainly the progress in lease payments for existing arrangements partially offset by new lease contracts and amendments to existing agreements.

Indebtedness

We have several bank guarantees aggregating approximately \$11 million as of December 28, 2024 (denominated in New Israeli Shekels) mainly in connection with lease agreements and import of vehicles.

In addition, in connection with the Reorganization and the Mobileye IPO, on April 21, 2022, we distributed to Intel the Dividend Note, in the aggregate principal amount of \$3.5 billion. In November 2022, we used approximately \$0.9 billion out of the net proceeds to repay a portion of indebtedness under the Dividend Note and Intel has contributed to Mobileye the remaining portion of the Dividend Note such that no amounts under the Dividend Note remain owed by us to Intel.

Non-GAAP Financial Measures

Our management uses Adjusted Gross Profit and Margin, Adjusted Operating Income and Margin and Adjusted Net Income, collectively, as key measures in operating our business. We use such non-GAAP financial measures to make strategic decisions, establish business plans and forecasts, identify trends affecting our business, and evaluate performance. For example, we use these non-GAAP financial measures to assess our pricing and sourcing strategy, in the preparation of our annual operating budget, and as a measure of our operating performance. We believe that these non-GAAP financial measures, when taken collectively, may be helpful to investors because they allow for greater transparency into what measures our management uses in operating our business and measuring our performance, and enable comparison of financial trends and results between periods where items may vary independent of business performance. The non-GAAP financial measures are presented for supplemental informational purposes only, should not be considered a substitute for financial information presented in accordance with GAAP, and may be different from similarly titled non-GAAP measures used by other companies. A reconciliation is provided below for each non-GAAP financial measure to the most directly comparable financial measure presented in accordance with GAAP. Investors are encouraged to review the related GAAP financial measures and the reconciliation of these non-GAAP financial measures to their most directly comparable GAAP financial measures, as well as our consolidated financial statements and related notes included elsewhere in this report.

We believe excluding items that neither relate to the ordinary course of business nor reflect our underlying business performance, such as the amortization of intangible assets, enables management and our investors to compare our underlying business performance from period-to-period. Accordingly, we believe these adjustments facilitate a useful evaluation of our current operating performance and comparison to our past operating performance and provide investors with additional means to evaluate cost and expense trends. In addition, we also believe these adjustments enhance comparability of our financial performance against those of other technology companies.

Our non-GAAP financial measures reflect adjustments for amortization charges for our acquisition-related intangible assets, share-based compensation expense, impairment of goodwill as well as the related income tax effects where applicable. We exclude amortization charges for our acquisition-related intangible assets for purposes of calculating certain non-GAAP measures, although revenue is generated, in part, by these intangible assets, to eliminate the impact of these non-cash charges that are inconsistent in size and are significantly impacted by the timing and valuation of our acquisitions. These amortization charges relate to intangible assets consisting of developed technology, customer relationships, and brands as a result of Intel's acquisition of Mobileye in 2017 and the acquisition of Moovit in 2020. We believe that the exclusion of share-based compensation expense is appropriate because it eliminates the impact of non-cash expenses for equity-based compensation costs that are based upon valuation methodologies and assumptions that vary over time, and the amount of the expense can vary significantly between companies due to factors that are unrelated to their core operating performance and that can be outside of their control. Although we exclude share-based compensation expenses from our non-GAAP measures, equity compensation has been, and will continue to be, an important part of our future compensation strategy and a significant component of our future expenses, and may increase in future periods. We believe that the exclusion of goodwill impairment is appropriate because it does not reflect our core operating performance, and excluding such non-cash impairment loss facilitates a useful evaluation of our performance and comparisons to past operating results.

Adjusted Gross Profit and Margin

We define Adjusted Gross Profit as gross profit presented in accordance with GAAP, excluding amortization of acquisition related intangibles and share-based compensation expense. Adjusted Gross Margin is calculated as Adjusted Gross Profit divided by total revenue.

[Table of Contents](#)

Set forth below is the reconciliation of gross profit to Adjusted Gross Profit and the calculations of gross margin and Adjusted Gross Margin:

U.S. dollars in millions	Year Ended					
	December 28, 2024		December 30, 2023		December 31, 2022	
	Amount	% of Revenue	Amount	% of Revenue	Amount	% of Revenue
Gross profit and margin	\$ 741	45 %	\$ 1,047	50 %	\$ 922	49 %
Add: Amortization of acquired intangible assets	376	23 %	406	20 %	469	25 %
Add: Share-based compensation expense	2	— %	2	— %	2	— %
Adjusted gross profit and margin	\$ 1,119	68 %	\$ 1,455	70 %	\$ 1,393	75 %

Our Gross Margin (gross profit as a percentage of revenue) and Adjusted Gross Margin (adjusted gross profit as a percentage of revenue) reflect the high value-added nature of our solutions. As we develop and sell full systems that include hardware beyond EyeQ™ SoCs, we expect that our Gross Margin and Adjusted Gross Margin will decrease because of the greater hardware content included in our solutions. However, as a result of a higher expected selling price for such systems, we expect our gross profit per unit will increase on a dollar basis.

Our Adjusted Gross Margin decreased from 70% for 2023 to 68% for 2024. The decrease was primarily due to the downward impact of the increased cost per unit of our EyeQ™ SoCs due to mix effects. The decrease was also related to higher percentage of revenue attributable to Supervision™.

Our Adjusted Gross Margin decreased from 75% for 2022 to 70% for 2023. The decrease was primarily due to the downward impact of the increased cost of our EyeQ™ SoCs (which was passed through as a price increase to our customers on a zero-margin basis).

Adjusted Operating Income and Margin

We define Adjusted Operating Income as operating income (loss) presented in accordance with GAAP, adjusted to exclude amortization of acquisition related intangibles, share-based compensation expenses and impairment of goodwill. Operating margin is calculated as operating income (loss) divided by total revenue, and Adjusted Operating Margin is calculated as Adjusted Operating Income divided by total revenue.

Set forth below is the reconciliation of operating income (loss) to Adjusted Operating Income and the calculations of Operating Margin and Adjusted Operating Margin:

U.S. dollars in millions	Year Ended					
	December 28, 2024		December 30, 2023		December 31, 2022	
	Amount	% of Revenue	Amount	% of Revenue	Amount	% of Revenue
Operating income (loss) and operating margin	\$ (3,225)	(195)%	\$ (33)	(2)%	\$ (37)	(2)%
Add: Amortization of acquired intangible assets	444	27 %	474	23 %	544	29 %
Add: Share-based compensation expense	279	17 %	252	12 %	174	9 %
Add: Expenses related to the IPO	—	— %	—	— %	4	— %
Add: Goodwill impairment	2,695	163 %	—	— %	—	— %
Adjusted operating income and margin	\$ 193	12 %	\$ 693	33 %	\$ 685	37 %

[Table of Contents](#)

Our operating loss increased by \$3,192 million in 2024 compared to 2023, mainly as a result of a goodwill impairment loss recognized during the third quarter of 2024.

Our Adjusted Operating Income decreased by \$500 million in 2024 compared to 2023, primarily due to a reduction in revenue, and an increase in operating expenses. Our Adjusted Operating Income increased by \$8 million in 2023 compared to 2022, primarily due to the growth in our overall business, partially offset by the increase in research and development and general and administrative expenses.

Our Adjusted Operating Margin decreased from 33% in 2023 to 12% in 2024, primarily due to a higher operating expenses on a lower revenue base, in addition to lower adjusted gross margin. Our Adjusted Operating Margin decreased from 37% in 2022 to 33% in 2023, primarily due to a decrease in our Adjusted Gross Margin.

We expect that our Adjusted Operating Margin in the near-term future will increase compared to 2024, mainly due to a lower expected impact of operating expenses as a percentage of revenue. This is expected to be partially offset by an over time decrease in Adjusted Gross Margin as we develop and sell full systems solutions contributing higher gross profit dollars per unit but lower percentage gross margin given the greater hardware content included in these systems.

Adjusted Net Income

We define Adjusted Net Income as net income (loss) presented in accordance with GAAP, adjusted to exclude amortization of acquisition related intangibles, share-based compensation expenses and impairment of goodwill, as well as the related income tax effects. Income tax effects have been calculated using the applicable statutory tax rate for each adjustment taking into consideration the associated valuation allowance impacts. The adjustment for income tax effects consists primarily of the deferred tax impact of the amortization of acquired intangible assets and impairment of goodwill.

Set forth below is the reconciliation of net income (loss) to Adjusted Net Income:

U.S. dollars in millions	Year Ended					
	December 28, 2024		December 30, 2023		December 31, 2022	
	Amount	% of Revenue	Amount	% of Revenue	Amount	% of Revenue
Net income (loss)	\$ (3,090)	(187)%	\$ (27)	(1)%	\$ (82)	(4)%
Add: Amortization of acquired intangible assets	444	27 %	474	23 %	544	29 %
Add: Share-based compensation expense	279	17 %	252	12 %	174	9 %
Add: Expenses related to the Mobileye IPO	—	— %	—	— %	4	— %
Add: Goodwill impairment	2,695	163 %	—	— %	—	— %
Less: Income tax effects	(123)	(7)%	(40)	(2)%	(35)	(2)%
Adjusted net income	\$ 205	12 %	\$ 659	32 %	\$ 605	32 %

Our Net Loss increased by \$3,063 million in 2024 compared to 2023, primarily due to a goodwill impairment loss recognized during the third quarter of 2024. Our Net Loss decreased by \$55 million in 2023 compared to 2022, primarily due to increase in revenue in addition to a decrease in amortization expense of intangible assets, partially offset by an increase of share-based compensation and an increase in financial income in 2023.

Our Adjusted Net Income decreased by \$454 million in 2024 compared to 2023, primarily due to a reduction in revenue, and an increase in research and development expenses. Our Adjusted Net Income increased by \$54 million in 2023 compared to 2022, primarily due to increase in revenue, partially offset by the increase in our research and development and general and administrative expenses and an increase in financial income in 2023.

We expect that our Adjusted Net Income Margin (which is the Adjusted Net Income divided by total revenue) in the near-term future will increase compared to 2024, mainly due to a lower expected impact of operating expenses as a percentage of revenue. This is expected to be partially offset by an over time decrease in Adjusted Gross Margin as we develop and sell full systems solutions contributing higher gross profit dollars per unit but lower percentage gross margin given the greater hardware content included in these systems.

Critical Accounting Policies and Estimates

Our audited consolidated financial statements have been prepared in accordance with U.S. GAAP. The preparation of financial statements and related disclosures in conformity with U.S. GAAP and the Company's discussion and analysis of its financial condition and operating results require the Company's management to make judgements, assumptions and estimates that affect the amounts reported. We base our assumptions, estimates and judgments on historical experience, current trends and other factors that management believes to be relevant at the time the estimate was made.

We consider an accounting policy to be a critical estimate if: (1) we must make assumptions that were uncertain when the judgment was made, and (2) changes in the relevant estimate or assumptions, or selection of a different estimate methodology, could have a significant impact on our financial position or the results that we report in our consolidated financial statements.

We believe that our estimates, assumptions, and judgments are reasonable in that they were based on information available when the estimates, assumptions and judgments were made. However, because future events and their effects cannot be determined with certainty, actual results could differ materially from those implied by our assumptions and estimates.

On an ongoing basis, management evaluates its estimates, including those related to intangible assets, goodwill and deferred taxes. We base our estimates, assumptions and judgments on historical experience and on various other factors that we believe to be reasonable under the circumstances, the results of which form the basis for making judgments about the carrying values of assets and liabilities that are not readily apparent from other sources. Actual results may materially differ from the results implied by these estimates and judgments under different assumptions or conditions.

Intangible Assets

Our consolidated financial statements include acquisition-related intangible assets, consisting of developed technology and customer relationships and brands. The identification and recognition of those intangible assets involve significant judgments relating to, among other things, the projected cash flows attributable to these intangible assets and the estimated useful lives of these intangible assets. We amortize acquisition-related intangible assets that are subject to amortization over their estimated useful lives. The useful lives are determined by management at the time of acquisition, based on historical experience and the economic life of the underlying technology, and are regularly reviewed for appropriateness.

We perform an annual review of significant finite-lived identified intangible assets to make a judgment on whether facts and circumstances indicate that the carrying amount may not be recoverable and an impairment may be required.

These reviews can be affected by various factors, including external factors such as industry and economic trends, and internal factors such as changes in our business strategy and our forecasts for specific product lines.

During the third quarter of 2024, we performed an impairment assessment of intangible assets and concluded that the sum of the expected future undiscounted cash flows expected to be generated by the intangible assets is substantially above their carrying amount and therefore no impairment was identified. The Company did not record any impairment of intangible assets for any of the periods presented.

Goodwill

We perform an annual impairment assessment of goodwill at the reporting unit level in the fourth quarter of each year, or more frequently if indicators of potential impairment exist. The analysis may include both qualitative and quantitative factors to assess the likelihood of impairment. Additionally, in accordance with ASC 350, we first assess qualitative factors to determine the existence of events or circumstances which indicate that it is more likely than not that the fair value of a reporting unit is less than its carrying amount. A quantitative impairment test is only required if we determine, based on the qualitative assessment, that it is more likely than not that a reporting unit's fair value is less than its carrying amount.

Qualitative factors include industry and market considerations, overall financial performance, and other relevant events and factors affecting the reporting unit.

[Table of Contents](#)

Our quantitative impairment test considers both the income approach and the market approach to estimate a reporting unit's fair value. Significant estimates include business projections, growth rates, and discount rates based on a reporting unit's weighted average cost of capital. The estimated fair value using a market approach is based on a number of assumptions, including current market capitalization as corroboration of fair value.

During the third quarter of 2024, the Company performed an interim quantitative goodwill impairment analysis for the "Mobileye" reporting unit due to the recent decline in the share price of the Company's Class A common stock and the corresponding decline in market capitalization, as well as macroeconomic and industry factors. The quantitative impairment test estimates the fair value of the reporting unit using an income approach. Significant inputs and assumptions incorporated in the valuation include business projections, terminal growth rate, and discount rate based on the reporting unit's weighted average cost of capital.

The Company also assesses the reasonableness of the estimated fair value of the reporting unit by comparison to its market capitalization, including consideration of expected acquirer synergies, control premium, and the current market.

The results of the impairment analysis indicated that the fair value of the Mobileye reporting unit was below its carrying amount and therefore a non-cash impairment loss of \$2,695 million (\$2,613 million, net of tax), was recognized in the Consolidated Statements of Operations.

A 1% increase in the discount rate and a 0.5% decrease in terminal growth rate would result in an additional impairment of \$1,493 million and \$465 million, respectively.

During the fourth quarter of 2024, we completed our annual impairment assessment. Based on the assessment, the fair value of the "Mobileye" reporting unit exceeds its book value. We also performed a detailed quantitative analysis for the "Other" reporting unit which showed that no impairment was required. Fair value was estimated using the expected present value of future cash flows and is categorized as Level 3 within the fair value hierarchy due to the use of unobservable inputs.

The Company did not record any impairment of goodwill in 2023 and 2022.

Income Taxes

The provision for income tax consists of income taxes in the various jurisdictions where the Company is subject to taxation, primarily the United States and Israel.

Certain components of the Company's business operations were included in the consolidated U.S. income tax return filed by Intel. The Company also files various foreign income tax returns on a separate basis, distinct from Intel. The income tax provision included in the Company's consolidated financial statements has been calculated using the separate return method, as if the Company had filed its own tax returns. The Company has entered into the Tax Sharing Agreement with Intel that establishes the respective rights, responsibilities and obligations of the Company and Intel with respect to tax matters and, therefore, ultimately governs the amount payable to Intel with respect to income taxes.

Any differences between taxes currently payable to Intel under the Tax Sharing Agreement and the current tax provision computed on a separate return basis, is reflected as adjustments to additional paid-in capital in the consolidated statement of shareholders' equity and financing activities within the consolidated statement of cash flows. According to the terms of the Tax Sharing Agreement, the Company and Intel will calculate and agree to estimated amounts owed quarterly but final amounts will also be calculated and paid upon consolidated tax return filings. Amounts payable under the Tax Sharing Agreement will be recorded in the same manner as other contractual obligations entered into by the Company.

Deferred tax assets and liabilities are recognized based on the future tax consequences attributable to temporary differences between the consolidated financial statement carrying amounts of existing assets and liabilities and their respective tax bases. We reduce the carrying amounts of deferred tax assets by a valuation allowance if, based on the available evidence, it is more likely than not that such assets will not be realized. Use of the term "more likely than not" indicates the likelihood of occurrence is greater than 50%.

Accordingly, the need to establish valuation allowances for deferred tax assets is continually assessed based on a more-likely-than-not realization threshold. This assessment considers, among other matters, the nature, frequency and severity of current and cumulative losses, forecasts of profitability and taxable income, the duration of statutory carryforward periods, our experience with the utilization of operating loss and tax credit carryforwards before expiration and tax planning strategies. In making such judgments, significant weight is given to evidence that can be objectively verified.

The Company recognizes tax benefits from uncertain tax positions only if it is more likely than not that the tax positions will be sustained on examination by the tax authorities, based on the technical merits of the position. The tax benefits recognized in the financial statements from such positions are measured based on the largest amount that is more than 50% likely to be realized upon ultimate settlement. The Company recognizes interest and penalties related to unrecognized tax benefits within the provision for (benefit from) taxes on the Consolidated Statements of Income.

For additional information regarding income taxes, see Note 8 of the Notes to the Consolidated Financial Statements.

New Accounting Pronouncements

See “Note 2: Significant Accounting Policies” to our consolidated financial statements included elsewhere in this report for information on new accounting pronouncements.

Item 7A. Quantitative and Qualitative Disclosures about Market Risk

We are exposed to market risk in the ordinary course of our business. Market risk represents the risk of loss that may impact our financial position due to adverse changes in financial market prices and rates. Our market risk exposure is primarily a result of foreign currency exchange rates and interest rates.

Interest Rate Risk

Our investments in money market funds, U.S. government bonds and short term deposits are subject to market risk due to changes in interest rates, which may affect our interest income and fair market value of our investments. To minimize this risk, we invest in institutional investors money market funds, which consist of high-grade securities. Our short term deposits are redeemable upon demand and held in banks domiciled in the U.S. and Europe, as well as in Israel. As of December 28, 2024 and December 30, 2023, our investment in money market funds was \$951 million and \$932 million, respectively; our U.S. government bonds were \$33 million and zero, respectively; and our short term deposits were \$419 million and \$222 million, respectively.

The primary objectives of our investments in money market funds, U.S. government bonds and short term deposits is to fund our cash requirements in the ordinary course of business and preserve principal. We do not enter into investments for trading or speculative purposes.

Foreign Currency Exchange Risk

The U.S. dollar is our functional currency. Substantially all our revenue was denominated in U.S. dollars for all periods presented; however certain expenses comprising our cost of revenue and operating expenses were denominated in New Israeli Shekels, mainly payroll. As a result, our consolidated financial statements are subject to fluctuations due to changes in exchange rates as our operating expenses, denominated in New Israeli Shekels, are remeasured from New Israeli Shekels into U.S. dollars. We also have expenses in other currencies, in particular the Euro, the Chinese Yuan, and the Japanese Yen, although to a much lesser extent.

We have attempted to minimize foreign currency risk, primarily by entering into a hedging services agreement with Intel during 2021. Intel centrally hedges its forecast cash flow exposure to the U.S. dollar / New Israeli Shekel exchange rates, and according to the agreement, we have been entitled to a certain allocation of the gains and losses arising from the execution of the hedging contracts. During the fourth quarter of 2022, we de-designated the remaining cash flow hedges for forecasted operating expenses denominated in ILS and will no longer be participating in Intel’s corporate hedging program.

[Table of Contents](#)

During the fourth quarter of 2024 we initiated a foreign currency cash flow hedging program, designed to hedge the Company's foreign exchange rate risk, resulting mainly from ILS payroll expenses. The Company hedges portions of its forecasted payroll payments denominated in ILS using forward contracts that are designated as cash flow hedges, as defined by ASC 815.

If the New Israeli Shekel had strengthened by 10% against the U.S. dollar, it would have decreased our cash flows by approximately \$67 million in the year ended December 28, 2024. If the New Israeli Shekel had strengthened by 10% against the U.S. dollar, it would have decreased our cash flows by approximately \$43 million in the year ended December 30, 2023. This exposure to U.S. dollar / New Israeli Shekel exchange rates in 2023 resulted from the nine months ended December 30, 2023, since in the first quarter of 2023 we were still affected by the hedging program with Intel and therefore the effect of the exchange rates would not have had a material impact on our cash flows. The effect of a 10% change in the U.S. dollar / New Israeli Shekel exchange rate would not have had a material impact on our cash flows in the year ended December 31, 2022 due to our hedging services agreement with Intel.

To the Board of Directors and Shareholders of Mobileye Global Inc.

Opinions on the Financial Statements and Internal Control over Financial Reporting

We have audited the accompanying consolidated balance sheets of Mobileye Global Inc. and its subsidiaries (the “Company”) as of December 28, 2024 and December 30, 2023, and the related consolidated statements of operations and comprehensive income (loss), of changes in equity and of cash flows for each of the three years in the period ended December 28, 2024, including the related notes (collectively referred to as the “consolidated financial statements”). We also have audited the Company's internal control over financial reporting as of December 28, 2024, based on criteria established in Internal Control - Integrated Framework (2013) issued by the Committee of Sponsoring Organizations of the Treadway Commission (COSO).

In our opinion, the consolidated financial statements referred to above present fairly, in all material respects, the financial position of the Company as of December 28, 2024 and December 30, 2023, and the results of its operations and its cash flows for each of the three years in the period ended December 28, 2024 in conformity with accounting principles generally accepted in the United States of America. Also in our opinion, the Company maintained, in all material respects, effective internal control over financial reporting as of December 28, 2024, based on criteria established in Internal Control - Integrated Framework (2013) issued by the COSO.

Basis for Opinions

The Company's management is responsible for these consolidated financial statements, for maintaining effective internal control over financial reporting, and for its assessment of the effectiveness of internal control over financial reporting, included in Management’s Report on Internal Control over Financial Reporting appearing under Item 9A. Our responsibility is to express opinions on the Company’s consolidated financial statements and on the Company's internal control over financial reporting based on our audits. We are a public accounting firm registered with the Public Company Accounting Oversight Board (United States) (PCAOB) and are required to be independent with respect to the Company in accordance with the U.S. federal securities laws and the applicable rules and regulations of the Securities and Exchange Commission and the PCAOB.

We conducted our audits in accordance with the standards of the PCAOB. Those standards require that we plan and perform the audits to obtain reasonable assurance about whether the consolidated financial statements are free of material misstatement, whether due to error or fraud, and whether effective internal control over financial reporting was maintained in all material respects.

Our audits of the consolidated financial statements included performing procedures to assess the risks of material misstatement of the consolidated financial statements, whether due to error or fraud, and performing procedures that respond to those risks. Such procedures included examining, on a test basis, evidence regarding the amounts and disclosures in the consolidated financial statements. Our audits also included evaluating the accounting principles used and significant estimates made by management, as well as evaluating the overall presentation of the consolidated financial statements. Our audit of internal control over financial reporting included obtaining an understanding of internal control over financial reporting, assessing the risk that a material weakness exists, and testing and evaluating the design and operating effectiveness of internal control based on the assessed risk. Our audits also included performing such other procedures as we considered necessary in the circumstances. We believe that our audits provide a reasonable basis for our opinions.

Definition and Limitations of Internal Control over Financial Reporting

A company's internal control over financial reporting is a process designed to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles. A company's internal control over financial reporting includes those policies and procedures that (i) pertain to the maintenance of records that, in reasonable detail, accurately and fairly reflect the transactions and dispositions of the assets of the company; (ii) provide reasonable assurance that transactions are recorded as necessary to permit preparation of financial statements in accordance with generally accepted accounting principles, and that receipts and expenditures of the company are being made only in accordance with authorizations of management and directors of the company; and (iii) provide reasonable assurance regarding prevention or timely detection of unauthorized acquisition, use, or disposition of the company's assets that could have a material effect on the financial statements.

Because of its inherent limitations, internal control over financial reporting may not prevent or detect misstatements. Also, projections of any evaluation of effectiveness to future periods are subject to the risk that controls may become inadequate because of changes in conditions, or that the degree of compliance with the policies or procedures may deteriorate.

Critical Audit Matters

The critical audit matter communicated below is a matter arising from the current period audit of the consolidated financial statements that was communicated or required to be communicated to the audit committee and that (i) relates to accounts or disclosures that are material to the consolidated financial statements and (ii) involved our especially challenging, subjective, or complex judgments. The communication of critical audit matters does not alter in any way our opinion on the consolidated financial statements, taken as a whole, and we are not, by communicating the critical audit matter below, providing a separate opinion on the critical audit matter or on the accounts or disclosures to which it relates.

Goodwill Impairment Assessments – Mobileye and Moovit reporting units

As described in Note 10 to the consolidated financial statements, the Company's goodwill balance was \$8,200 million as of December 28, 2024, and the goodwill associated with the Mobileye and Moovit reporting units was \$8,089 million and \$111 million, respectively. Management conducts an impairment test as of the end of each year, or more frequently if events or circumstances indicate that the carrying value of goodwill may be impaired. Potential impairment is identified by comparing the fair value of a reporting unit to its carrying value, including goodwill. In 2024, the Company performed a detailed quantitative analysis for the Mobileye and Moovit reporting units. Based on the goodwill impairment assessment during the year ended December 28, 2024, a goodwill impairment charge of \$2,695 million was recorded to the Mobileye reporting unit during the third quarter due to a decline in the price of the Company's Class A common stock and corresponding market capitalization, as well as macroeconomic and industry factors. Fair value is estimated by management using a discounted cash flow model. Management's cash flow projections for the Mobileye and Moovit reporting units included significant judgments and assumptions relating to financial projections, terminal growth rate and the discount rate.

The principal considerations for our determination that performing procedures relating to the goodwill impairment assessment of the Mobileye and Moovit reporting units is a critical audit matter are (i) the significant judgment by management when developing the fair value estimate of the Mobileye and Moovit reporting units, and (ii) a high degree of auditor judgment, subjectivity, and effort in performing procedures and evaluating management's significant assumptions related to financial projections, terminal growth rate and the discount rate. In addition, the audit effort involved the use of professionals with specialized skills and knowledge.

[Table of Contents](#)

Addressing the matter involved performing procedures and evaluating audit evidence in connection with forming our overall opinion on the consolidated financial statements. These procedures included testing the effectiveness of controls relating to management's goodwill impairment assessments, including controls over the valuation of the Mobileye and Moovit reporting units. These procedures also included, among others, (i) testing management's process for developing the fair value estimate; (ii) evaluating the appropriateness of the discounted cash flow model used by management; (iii) testing the completeness and accuracy of underlying data used in the discounted cash flow model; (iv) evaluating the reasonableness of the significant assumptions used by management related to financial projections, terminal growth rate and the discount rate. Evaluating management's assumptions related to future cash flow projections involved evaluating whether the assumptions used by management were reasonable considering (i) the current and past performance of the Mobileye and Moovit reporting units, (ii) the consistency with external market and industry data, (iii) whether these assumptions were consistent with evidence obtained in other areas of the audit, and (iv) assessing the adequacy of disclosures in the consolidated financial statements. Professionals with specialized skill and knowledge were used to assist in evaluating the appropriateness of the discounted cash flow model and the reasonableness of the discount rate assumption.

**MOBILEYE GLOBAL INC.
NOTES TO CONSOLIDATED FINANCIAL STATEMENTS**

NOTE 1 GENERAL

Background

Mobileye Global Inc. (“Mobileye”, “the Company” or “we”) is a leader in the development and deployment of advanced driver assistance systems (“ADAS”) and autonomous driving technologies and solutions, aimed to provide the capabilities required for the future of autonomous driving, leveraging a comprehensive suite of purpose-built software and hardware technologies. Mobileye combines the operations of its consolidated subsidiaries, which include the Mobileye Group, as defined below. Before the completion of the Mobileye IPO and the reorganization in October 2022, the Company consisted of the “Mobileye Group”, which combined the operations of Cyclops Holdings Corporation (“Cyclops”), Mobileye B.V. and its subsidiaries, GG Acquisition Ltd. and Moovit App Global Ltd. and its subsidiaries (“Moovit”) and certain Intel employees mainly in research and development (the “Intel Aligned Groups”).

Mobileye operates as a subsidiary of Intel Corporation (“Intel” or the “Parent”), which acquired a majority stake in Mobileye in August 2017 (the “Mobileye Acquisition”). The remaining issued and outstanding shares of Mobileye were acquired by Intel in 2018.

Intel directly or indirectly holds all of the Class B common stock of Mobileye, which as of December 28, 2024, represents approximately 87.7% of our outstanding common stock and 98.6% of the voting power of our common stock. Mobileye’s Class A common stock are traded on the Nasdaq Global Select Market since October 26, 2022 under the ticker symbol “MBLY”.

Secondary Offering

On June 7, 2023, the Company announced the pricing of a public secondary offering of 38,500,000 shares of its Class A common stock (which shares were received upon the conversion of 38,500,000 shares of Class B common stock into Class A common stock) by Intel at a public offering price of \$42.00 per share, which closed on June 12, 2023 (the “Secondary Offering”). The Company did not receive any proceeds from this offering. The Company paid the costs associated with the registration of shares in connection with the Secondary Offering in the amount of \$1 million, other than underwriting discounts, fees and commissions. These costs were expensed as incurred within general and administrative expenses. Upon the completion of the Secondary Offering, Intel continues to directly or indirectly hold all of the Class B common stock of Mobileye.

Operations in Israel

On October 7, 2023, Hamas launched a series of attacks on civilian and military targets in Southern and Central Israel, to which the Israel Defense Forces have responded. In addition, both Hezbollah and the Houthi movement have attacked military and civilian targets in Israel, to which Israel has responded, including through increased air and ground operations in Lebanon. In addition, the Houthi movement has attacked international shipping lanes in the Red Sea. Further, on April 13, 2024 and on October 1, 2024, Iran launched a series of drone and missile strikes against Israel, to which Israel has responded. How long and how severe the current conflict in Gaza, Northern Israel, Lebanon or the broader region becomes is unknown at this time and any continued clash among Israel, Hamas or Hezbollah, Iran or other countries or militant groups in the region may escalate in the future into a greater regional conflict. To date our operations and financial results have not been materially affected, although as of January 31, 2025 approximately 3.7% of our employees have been called to reserve duty in the Israel Defense Forces. We expect that the current conflict in the Gaza Strip, Lebanon and the security escalation in Israel will not have a material impact on our business results in the short term. However, since this is an event beyond our control, its continuation or cessation may impact our expectations. We continue to monitor political and military developments closely and examine the consequences for our business, results of operations and financial condition.

MOBILEYE GLOBAL INC.
NOTES TO CONSOLIDATED FINANCIAL STATEMENTS

Other events during the current reporting period

On March 18, 2024, the Company announced the winding down of the Aftermarket Solutions Unit that provides retrofitted advanced driver assistance technology. This decision was made following a thorough review of this unit's business prospects and investment needs showing that since automakers and other vehicle manufacturers have steadily increased the rate at which integrated ADAS solutions are installed on new vehicles, the demand and future addressable market for retrofitted ADAS solutions has declined. As a result, this division has seen its revenues decline meaningfully, and in recent years has not positively contributed to Mobileye's profitability. The plan for winding down of the Aftermarket Solutions Unit resulted in a reduction in workforce of approximately 100 employees worldwide. The termination costs are in the amount of approximately \$4 million, which was recognized as an expense in the year ended December 28, 2024.

On September 9, 2024, the Company announced the winding down of the Lidar R&D Unit by the end of 2024 and the cessation of internal development of next-generation frequency modulated continuous wave (FMCW) lidars for use in autonomous and highly automated driving systems. The decision was based on a variety of factors, including substantial progress on the Company's EyeQ™6-based computer vision perception, increased clarity on the performance of the Company's internally developed imaging radar, and continued better-than-expected cost reductions in third-party time-of-flight lidar units. The plan for winding down of the Lidar R&D Unit includes a reduction in workforce of approximately 90 employees worldwide. The affected employees are entitled to additional termination costs in the amount of approximately \$4.6 million which was recognized as an R&D expense in the year ended December 28, 2024.

NOTE 2 SIGNIFICANT ACCOUNTING POLICIES

Basis of Presentation

The Company operates on a 52-week or 53-week fiscal year that ends on the last Saturday in December. Fiscal years 2024 and 2023 were a 52-week fiscal years. Fiscal year 2022 was a 53-week fiscal year.

Prior to the Mobileye IPO

The financial statements and accompanying notes that include periods ending or as of dates prior to the completion of the Mobileye IPO in October 2022, have been derived from the consolidated financial statements and accounting records of Intel and are presented as if the Company had been operating as a stand-alone company. The assets, liabilities, revenue, and expenses directly attributable to the Company's operations, including the acquired goodwill and intangible assets, have been reflected in these consolidated financial statements on a historical cost basis, as included in the consolidated financial statements of Intel.

The Company utilized the Intel Aligned Groups mainly in research and development activities. The associated costs of the Intel Aligned Groups are reflected on a specific attribution basis in the consolidated statements of operations and comprehensive income (loss). Intel Aligned Groups also participated in various Intel compensation and benefit plans. Portions of those plans' costs were based on actual headcount and included in these consolidated financial statements. These costs are not necessarily indicative of costs that would have been incurred had the Company operated on a stand-alone basis.

MOBILEYE GLOBAL INC.
NOTES TO CONSOLIDATED FINANCIAL STATEMENTS

The statements of operations and comprehensive income (loss) include allocations of general corporate expenses from Intel. These expenses have been allocated to the Company on the basis of direct usage when identifiable or allocated on the basis of headcount. Management of the Company and Parent considered the basis on which the expenses have been allocated to be a reasonable reflection of the utilization of the services provided to or the benefit received by the Company during the periods presented. Mobileye largely continued to operate as a standalone operation and had not been fully integrated into Intel, with limited use of corporate overhead functions. The allocated costs for the periods presented in the statement of operations and comprehensive income (loss) were not material. The allocations may not be reflective of the expenses that would have incurred had the Company operated as a stand-alone company for the periods presented. These costs also may not be indicative of the expenses that the Company will incur in the future or would have incurred if the Company had obtained these services from a third party. Actual costs that may have been incurred if the Company had operated as a stand-alone company would depend on a number of factors, including the chosen organizational structure, the outsourcing of certain functions, and other strategic decisions.

As Mobileye Group was not historically held by a single legal entity, total parent net investment is shown in lieu of equity in the periods prior to the completion of the Mobileye IPO and represents Intel's total interest in the recorded net assets of Mobileye Group. All intercompany transactions within the previously combined businesses of the Company have been eliminated. Transactions between the Company and Intel, arising from arrangements with Intel and other similar related-party transactions, were considered to be effectively settled at the time the transactions were recorded, unless otherwise noted. The total net effect of the settlement of these transactions was reflected within parent net investment as a component of equity and within net transfers from Parent as a financing activity in the periods prior to the completion of the Mobileye IPO, unless otherwise noted.

Following the Mobileye IPO

Following the completion of the Mobileye IPO, the consolidated financial statements include the accounts of the Company and its wholly-owned subsidiaries.

Following the legal entity reorganization and the completion of the Mobileye IPO, Intel continues to control the Company and holds all of the Company's Class B common stock. Refer to Note 9 *Related Party Transactions* and Note 6 *Equity* for further information.

The consolidated financial statements have been prepared in accordance with United States generally accepted accounting principles ("U.S. GAAP"). All intercompany balances and transactions have been eliminated in consolidation.

Use of estimates

The preparation of consolidated financial statements in conformity with U.S. GAAP requires management to make estimates, judgments and assumptions that affect the amounts and events reported and disclosed in the consolidated financial statements and accompanying notes. We base our estimates on historical experience and on various other assumptions and factors, including the current economic environment, that we believe to be reasonable under the circumstances. Actual results could differ from those estimates.

On an on-going basis, management evaluates its estimates, judgments, and assumptions. The most significant estimates and assumptions relate to useful lives of intangible assets, impairment assessment of intangible assets and goodwill, and income taxes. A change in estimates, including a change in the overall market value of the Company, could require reassessments of the items noted above.

Functional currency

The majority of the Company and its subsidiaries revenue are denominated in the United States ("U.S.") dollar, as are most purchases of materials and components. The Company's financings and capitalization have also been denominated in the U.S. dollar. Management believes that the currency of the primary economic environment in which the Company and its subsidiaries operate is the U.S. dollar, and thus, the U.S. dollar is the functional and reporting currency of the Company and its subsidiaries.

MOBILEYE GLOBAL INC.
NOTES TO CONSOLIDATED FINANCIAL STATEMENTS

Accordingly, transactions in currencies other than the U.S. dollar are measured and recorded in the functional currency using the exchange rate in effect at the date of the transaction. Monetary assets and liabilities that are denominated in currencies other than the U.S. dollar are measured using the official exchange rate at the balance sheet date. Non-monetary assets and liabilities are remeasured into the functional currency using the historical exchange rate. The effects of foreign currency remeasurements are recorded in the consolidated statements of operations and comprehensive income (loss) as other financial income (expense), net.

Investments*Debt Investments*

Marketable debt securities consist of highly liquid U.S. government bonds with maturities of up to six months when purchased. These debt investments are classified as Available For Sale investments and measured at fair value with unrealized gains and losses, net of tax, recorded in accumulated other comprehensive income (loss). We consider all highly liquid debt investments that are readily convertible into cash and have an original maturity of three months or less at the time of purchase to be cash equivalents. Debt investments with original maturities of greater than three months and less than one year, are classified within other current assets.

Available for sale debt investments are subject to a periodic impairment review. For investments in an unrealized loss position, we determine whether a credit loss exists. We recognize an allowance for credit losses, up to the amount of the unrealized loss when appropriate, and write down the amortized cost basis of the investment if it is more likely than not we will be required or we intend to sell the investment before recovery of its amortized cost basis.

Equity Investments

Equity investments consist of investments in marketable and non-marketable equity securities. Investments in marketable equity securities are measured and recorded at fair value with changes in fair value, whether realized or unrealized, recorded in the statement of operations. Equity investments are classified within other current assets. Investments in non-marketable equity securities without a readily determinable fair value, are measured using the measurement alternative under ASC Topic 321, Investments - Equity Securities. This measurement alternative allows us to measure the equity investment at its cost minus impairment, if any, plus or minus changes resulting from observable price changes in orderly transactions for the identical or a similar investment of the same issuer.

Cash, cash equivalents and restricted cash

Cash equivalents consist of short term deposits and money market funds. The short term deposits are short-term unrestricted highly liquid investments that are readily convertible to cash and with original maturities of three months or less at acquisition. The money market funds consist of institutional investors money market funds and are readily redeemable to cash.

Restricted bank deposits are cash amounts related to bank guarantees mainly in connection with lease agreements and import of vehicles. Such deposits are stated at cost including accrued interest, which approximates market values. These amounts are included in other current and long-term assets on the consolidated balance sheets.

The following is a reconciliation of the cash, cash equivalents and restricted cash for each period presented:

U.S. dollars in millions	As of	
	December 28, 2024	December 30, 2023
Cash	\$ 56	\$ 58
Short term deposits	419	222
Money market funds	951	932
Restricted cash (within other current and other long-term assets)	12	14
Cash, cash equivalents and restricted cash presented in the consolidated statements of cash flows	\$ 1,438	\$ 1,226

MOBILEYE GLOBAL INC.
NOTES TO CONSOLIDATED FINANCIAL STATEMENTS

Fair value measurement

When determining fair value, the Company considers the principal or most advantageous market in which it would transact, as well as assumptions that market participants would use when pricing the asset or liability. The Company assesses fair value hierarchy levels for its financial assets based on the underlying financial instrument.

Consistent with Accounting Standards Codification (“ASC”) 820, Fair Value Measurement, the Company follows a three-tier fair value hierarchy as a basis for considering the assumptions and for inputs used in the valuation methodologies in measuring fair value:

Level 1: Quoted prices (unadjusted) in active markets that are accessible at the measurement date for identical assets or liabilities. The fair value hierarchy gives the highest priority to Level 1 inputs.

Level 2: Observable prices that are based on inputs not quoted on active markets but are corroborated by market data or active market data for similar, but not identical assets or liabilities.

Level 3: Unobservable inputs are used when little or no market data is available. The Company monitors and reviews the inputs and results of these valuation models to help ensure the fair value measurements are reasonable and consistent with market experience in similar asset classes. The fair value hierarchy gives the lowest priority to Level 3 inputs.

In determining fair value, the Company utilizes valuation techniques that maximize the use of observable inputs and minimize the use of unobservable inputs to the extent possible and if applicable considers credit risk in its assessment of fair value.

The carrying value of short term deposits classified as cash equivalents approximates their fair value due to the short maturity of these items.

The Company’s investment in money market funds are measured at fair value within Level 1 of the fair value hierarchy because they consist of financial assets for which quoted prices are available in an active market. Interest income related to money market funds for the years ended December 28, 2024, and December 30, 2023 amounted to \$47 million and \$46 million, respectively.

The Company’s investment in U.S. government bonds is measured at fair value within Level 1 of the fair value hierarchy because they consist of U.S. government bonds for which quoted prices are available in an active market.

The Company’s marketable equity investments are measured at fair value within Level 1 of the fair value hierarchy because they consist of investments in marketable equity securities for which quoted prices are available in an active market.

The Company’s derivative instruments designated as hedging instruments, are measured at fair value within Level 2 of the fair value hierarchy.

The carrying amounts of trade accounts receivable and accounts payable approximate fair value because of their generally short maturities.

Inventories

Inventories are stated at the lower of cost and net realizable value. The Company computes inventory cost on an average cost basis and adjusts for excess and obsolete inventories primarily based on future demand and market conditions, including product-specific facts and circumstances which considers the Company’s customer base and an assessment of selling price in relation to product cost. Once written-down, a new lower cost basis for that inventory is established.

Property and equipment, net

Property and equipment are stated at cost, less accumulated depreciation. Property and equipment are depreciated on a straight-line basis over their estimated useful lives.

MOBILEYE GLOBAL INC.
NOTES TO CONSOLIDATED FINANCIAL STATEMENTS

The estimated useful lives per asset type are as follows:

	<u>Years</u>
Computers, electronic equipment and software	3-7
Vehicles	7
Office furniture and equipment	14
Buildings	10 - 25

Leasehold improvements are amortized by the straight-line method over the shorter of the term of the lease and estimated useful life of the improvements.

Assets in construction are not depreciated until they are available for their intended use.

Goodwill

The Company performs an annual impairment assessment of goodwill at the reporting unit level in the fourth quarter of each year, or more frequently if indicators of potential impairment exist. The analysis may include both qualitative and quantitative factors to assess the likelihood of impairment. In accordance with ASC 350, the Company initially assesses qualitative factors to determine whether the existence of events or circumstances indicate that it is more likely than not that the fair value of a reporting unit is less than its carrying amount. Qualitative factors include industry and market considerations, overall financial performance, and other relevant events and factors affecting the reporting unit. If the Company determines, based on this assessment, that it is more likely than not that the fair value of the reporting unit is less than its carrying amount, it performs a quantitative goodwill impairment test by comparing the reporting unit's fair value with its carrying amount. An impairment loss is recognized for the amount by which the reporting unit's carrying amount exceeds its fair value.

The Company's quantitative impairment test may consider both the income approach and the market approach to estimate a reporting unit's fair value. Significant estimates for the income approach include financial projections, terminal growth rate, and discount rate based on a reporting unit's weighted average cost of capital. The estimated fair value using a market approach is based on a number of assumptions, including current market capitalization as corroboration of fair value.

Forecasts and estimates are based on assumptions that are consistent with the plans and estimates used to manage the business. Changes in these estimates could change the conclusion regarding an impairment of goodwill.

A non-cash goodwill impairment loss of \$2,695 million (\$2,613 million, net of tax), was recognized for the Mobileye reporting unit in the third quarter of 2024, for further detail see Note 10 of the Notes to Consolidated Financial Statements.

Intangible assets, net

The Company amortizes acquisition-related intangible assets that are subject to amortization over their estimated useful life.

The Company performs an annual review of significant finite-lived identified intangible assets to determine whether facts and circumstances indicate that the carrying amount may not be recoverable. These reviews can be affected by various factors, including external factors such as industry and economic trends, and internal factors such as changes in the Company's business strategy and its forecasts for specific product lines. The Company did not record any impairment of intangible assets for any of the periods presented.

Impairment of long-lived assets

Long-lived assets held and used by the Company are reviewed for impairment whenever events or changes in circumstances indicate that the carrying amount of the assets may not be recoverable. Assets are categorized and evaluated for impairment at the lowest level of identifiable cash flows. In the event that the sum of the expected future undiscounted cash flows expected to be generated by the long-lived assets is less than the carrying amount of such assets, an impairment charge would be recognized and the assets would be written down to their estimated fair values. The Company did not record any impairment of long-lived assets for any of the periods presented.

MOBILEYE GLOBAL INC.
NOTES TO CONSOLIDATED FINANCIAL STATEMENTS

Research and development, net

Research and development costs are expensed as incurred, and consist primarily of personnel, facilities, equipment, and supplies for research and development activities.

The Company follows the provisions of ASC 985, Accounting for the Costs of Computer Software to Be Sold, Leased, or Otherwise Marketed, which requires that software development costs incurred in conjunction with development be charged to research and development expenses until technological feasibility is established. The technological feasibility is established upon completion of a working model. The costs incurred by the Company between technological feasibility and general release to the public have been insignificant. Accordingly, all research and development costs have been expensed as incurred.

The Company enters into best-efforts nonrefundable, non-recurring engineering (“NRE”) arrangements pursuant to which the Company is reimbursed for a portion of the research and development expenses attributable to specific development programs. The Company does not receive any additional compensation or royalties upon completion of such projects and the potential customer does not commit to purchase the resulting product in the future. The participation reimbursement received by the Company does not depend on whether there are future benefits from the project. All intellectual property generated from these arrangements is exclusively owned by the Company.

Participation in expenses for research and development projects are recognized on the basis of the costs incurred and are netted against research and development expenses in the consolidated statements of operations and comprehensive income (loss). Research and development reimbursements of \$91 million, \$89 million, and \$58 million were offset against research and development costs in the years ended December 28, 2024, December 30, 2023, and December 31, 2022, respectively.

Derivatives and hedging

Intel’s hedging program

Beginning in 2021, as part of Intel’s corporate hedging program, Intel is hedging forecasted cash flows denominated in Israeli Shekel (“ILS”) related to the Company. ILS is the largest operating expense currency of the Company. Intel combines all of its ILS exposures, and as part of Intel’s hedging program enters into hedging contracts to hedge Intel’s combined ILS exposure. Derivative gains and losses attributed to these consolidated financial statements were recorded under accumulated other comprehensive income and reclassified into earnings in the same period or periods during which the hedged transaction affected the statement of operations.

During the fourth quarter of 2022, the Company de-designated its remaining cash flow hedges for forecasted operating expenses denominated in ILS and will no longer participate in the hedging services agreement with Intel. As the hedged transactions and cash flows related to the outstanding instruments were expected to occur as originally forecasted, the associated gains and losses deferred in accumulated other comprehensive income (loss) on the Company’s consolidated balance sheet were reclassified into earnings in the same period or periods during which the originally hedged transactions affected earnings. Any subsequent changes in the fair value of the outstanding derivative instruments after the de-designation and termination of hedge accounting, were immediately reflected in operating expenses. As of December 30, 2023, there were no outstanding hedging instruments and all of the related accumulated other comprehensive income (loss) was reclassified into the statement of operations and comprehensive income (loss).

MOBILEYE GLOBAL INC.
NOTES TO CONSOLIDATED FINANCIAL STATEMENTS

Mobileye's hedging program

During the fourth quarter of 2024 the Company initiated a foreign currency cash flow hedging program, designed to hedge the Company's foreign exchange rate risk, resulting from ILS payroll expenses. The Company hedges portions of its forecasted payroll payments denominated in ILS for a period of up to 12 months, using forward contracts that are designated as cash flow hedges, as defined by ASC 815. These derivative instruments are measured at fair value within Level 2 of the fair value hierarchy. Derivative instruments are recorded as other current assets or other current liabilities, according to the timing of the cash flows. For these derivative instruments, designated as a cash flow hedge, gains and losses are reported as a component of other comprehensive income (loss) and reclassified into earnings in the same line item associated with the hedged transaction and in the same period or periods during which the hedged transaction affects the statement of operations. As of December 28, 2024, the Company expects to reclassify all of its unrealized gains and losses from accumulated other comprehensive income to earnings during the next twelve months. The cash flows associated with these derivatives are classified in the consolidated statements of cash flows consistently with the classification of the underlying hedged transaction, within cash flows from operating activities.

The notional amount and fair value of outstanding derivatives at the end of each period were:

U.S. dollars in millions	As of	
	December 28, 2024	December 30, 2023
Notional amount of foreign currency contracts	\$ 214	\$ —
Fair value of foreign currency contracts	\$ 2	\$ —

The change in accumulated other comprehensive income (loss) relating to gains (losses) on derivatives used for hedging was as follows:

U.S. dollars in millions	Year ended		
	December 28, 2024	December 30, 2023	December 31, 2022
Other comprehensive income (loss) before reclassifications	\$ 2	\$ —	\$ (33)
Amounts reclassified out of accumulated other comprehensive (income) loss *	—	10	18
Tax effects	—	(1)	1
Other comprehensive income (loss), net	\$ 2	\$ 9	\$ (14)

* Amounts of gains (losses) reclassified from other comprehensive income into profit or loss are recorded in cost of revenue and operating expenses.

Revenue recognition

The Company recognizes revenue when performance obligations are satisfied as evidenced by the transfer of control of the Company's products or services to customers. Substantially all of the Company's revenue is derived from product sales. In accordance with contract terms, revenue for product sales is recognized at the time of product shipment from the Company's facilities, as determined by the agreed upon 'ex-works' shipping terms which specify that title and risks will pass to the customer upon delivery at the Company's warehouse. Revenue for product sales to resellers and distributors is recognized at the time of delivery of products to the resellers and distributors.

The Company measures revenue based on the amount of consideration the Company expects to be entitled to in exchange for products or services. Variable consideration is estimated and reflected as an adjustment to the transaction price. The Company determines variable consideration, which consists primarily of various volume rebates, by estimating the most likely amount of consideration the Company expects to receive from the customer. Volume rebates earned by customers are offset against their receivable balances. Rebates earned by customers when they do not have outstanding receivable balances are recorded within other current liabilities. Substantially all of the Company's contracts do not include right of return or acceptance provisions. Revenue is recognized net of any taxes invoiced to customers, which are subsequently remitted to governmental authorities. Any shipping and handling costs related to the fulfillment of sales are included in cost of revenue.

MOBILEYE GLOBAL INC.
NOTES TO CONSOLIDATED FINANCIAL STATEMENTS

Sales of the Company's products regularly include warranties which provides the customer with assurance that the products delivered will perform in accordance with agreed-upon specifications. These standard warranties are assurance type warranties and do not offer any services in addition to the assurance that the product will continue working as specified. Therefore, the warranties are not considered separate performance obligations.

The Company is generally the principal in a transaction and, therefore, primarily records revenue on a gross basis. When the Company is a principal in a transaction, it has determined that it controls the ability to direct the use of the product prior to transfer to a customer, is primarily responsible for fulfilling the promise to provide the product or service to the customer, has discretion in establishing prices, and ultimately controls the transfer of the product or services provided to the customer.

Advertising expenses

Advertising expenses are charged to sales and marketing on the consolidated statements of operations and comprehensive income (loss) as incurred. Advertising expenses for the years ended December 28, 2024, December 30, 2023, and December 31, 2022 amounted to \$3 million, \$4 million and \$3 million, respectively.

Share-based compensation

Prior to the completion of the Mobileye IPO, the Company's employees participated in Intel's equity incentive plans and were granted options and restricted stock units ("RSUs") on Intel's common shares. In connection with the Mobileye IPO, the Company approved the Mobileye Global Inc. 2022 Equity Incentive Plan (the "2022 Plan") which allows the compensation committee of the Company to make equity-based incentive awards to our employees, consultants and outside directors. Equity awards granted to employees are accounted for using the estimated grant date fair value. The Company estimates the fair value of employee stock options to purchase shares of Intel common stock with a service condition using an option pricing model at the date of grant and values RSUs based on the market value of the underlying share of Intel or Mobileye common stock (as applicable) at the date of grant. The Company recognizes share-based compensation expense for the value of its awards, which have graded vesting based on service conditions, using the straight-line method over the requisite service period of each of the awards, net of estimated forfeitures.

Income Taxes

The provision for income tax consists of income taxes in the various jurisdictions where the Company is subject to taxation, primarily the United States and Israel.

The Company computes the provision for income taxes under the asset and liability method prescribed by the Financial Accounting Standards Board ("FASB") Guidance ASC 740, Income Taxes, which requires the recognition of deferred tax assets and liabilities for the expected future tax consequences of events that have been included in these consolidated financial statements. Under this method, deferred tax assets and liabilities, resulting from temporary differences between the financial reporting and tax bases of assets and liabilities, are measured as of the balance sheet date using enacted tax rates expected to apply to taxable income in the years the temporary differences are expected to reverse. The effect of a change in tax rates on deferred tax assets and liabilities is recognized in income in the period that includes the enactment date.

The realization of deferred tax assets depends upon the existence of sufficient taxable income, of appropriate character, within the carryback or carryforward periods under the tax law in the applicable tax jurisdiction. Valuation allowances are established when the Company determines, based on available information, that it is more likely than not that deferred tax assets will not be realized. Significant judgment is required in determining whether valuation allowances should be established, as well as the amount of such allowances.

The Company records accruals for uncertain tax positions when the Company believes that it is more likely than not that a tax position will not be sustained on examination by tax authorities based on the technical merits of the position. The Company adjusts these accruals when facts and circumstances change, such as the closing of a tax audit or the refinement of an estimate.

MOBILEYE GLOBAL INC.
NOTES TO CONSOLIDATED FINANCIAL STATEMENTS

During the years presented in the consolidated financial statements, certain components of the Company's business operations were included in the consolidated US domestic income tax return filed by the Company's Parent. The Company also files various foreign income tax returns on a separate basis, distinct from its Parent. The income tax provision included in the Company's consolidated financial statements has been calculated using the separate return method, as if the Company had filed its own tax returns.

The Company has entered into a Tax Sharing Agreement with its Parent that establishes the amount of cash payable for the Company's share of the tax liability owed on consolidated tax return filings with its Parent. Any differences between taxes currently payable to the Company's Parent under the Tax Sharing Agreement and the current tax provision computed on a separate return basis, is reflected as adjustments to additional paid-in capital in the consolidated statement of changes in equity and financing activities within the consolidated statement of cash flows. For additional information regarding the Tax Sharing Agreement, see Note 9 of the Notes to Consolidated Financial Statements.

The Company presents tax loss and tax credit carry-forward attributes under the separate return method approach. Such tax attributes may not be benefited in the same period as the Company's Parent on a consolidated tax return. As a result, there are inherent differences between the Company's separate tax return method approach and certain actual tax returns filed on a consolidated basis with Intel.

For further detail regarding income tax, refer to Note 8 *Income Taxes*.

Provision for warranties

The Company provides warranties for its products, which vary with respect to each contract and in accordance with the nature of each specific product. The warranty terms vary from one to three years, with the majority of the Company's products being subject to a warranty period of one year. The Company estimates the costs that may be incurred under its warranty and records a liability in the amount of such costs at the time revenue is recognized. The Company periodically assesses the adequacy of its recorded warranty liabilities and adjusts the amounts as necessary.

Provision for warranties is included in other current liabilities on the consolidated balance sheets. Provision for warranties as of December 28, 2024 and December 30, 2023, as well as warranty expenses for the each of the years presented were not material.

Loss contingencies

The Company is currently involved in commercial claims within the ordinary course of business. The Company reviews the status of each matter and assesses its potential financial exposure. If the potential loss from any claim or legal proceeding is considered probable and the loss can be reasonably estimated, the Company accrues a liability for the estimated loss. When accruing these costs, the Company recognizes an accrual for an amount within a range of loss that is the best estimate within the range. When no amount within the range is a better estimate than any other, the Company accrues for the minimum estimated loss within the range. The Company discloses contingencies when it believes that a loss is not probable, but reasonably possible.

Management believes that there are no current matters that would have a material effect on the Company's consolidated balance sheets, statement of operations or cash flows. Legal fees are expensed as incurred.

Leases

The Company accounts for leases in accordance with ASC 842, Leases, which requires lessees to recognize leases on the consolidated balance sheets and disclose key information about leasing arrangements.

MOBILEYE GLOBAL INC.
NOTES TO CONSOLIDATED FINANCIAL STATEMENTS

Leases primarily consist of real estate property and vehicles and are classified as operating leases with fixed payment terms. Certain operating leases provide for annual increases to lease payments based on an index or a rate. The Company determines if an arrangement is a lease, or contains a lease, at inception and records the leases upon lease commencement, which is the date when the underlying asset is made available for use by the lessor. Right-of-use (“ROU”) assets represent the Company’s right to use an underlying asset for the lease term and lease liabilities represent the Company’s obligation to make lease payments arising from the lease. ROU assets and lease liabilities are included in other long-term assets, other current liabilities, and other long-term liabilities on the consolidated balance sheet. Lease expenses for the operating leases are recognized on a straight-line basis over the lease term and are included in operating expenses in the consolidated statements of operations and comprehensive income (loss). Options to extend or terminate the lease are taken into account when it is reasonably certain at the commencement date that such options will be exercised by the Company.

The Company elected to apply the short-term lease exemption for lease with a non-cancelable period of twelve months or less. Additionally, the Company has lease agreements with lease and non-lease components. The non-lease components are accounted for separately and not included in the leased assets and corresponding liabilities. On the commencement date, lease payments that include variable lease payments dependent on an index or a rate (such as the Consumer Price Index), are initially measured using the index or rate at the commencement date.

The interest rate used to determine the present value of the future lease payments is the Company’s incremental borrowing rate because the interest rate implicit in most of its leases is not readily determinable.

Earnings (loss) per share

Basic earnings (loss) per share is computed by dividing net income (loss) for the period by the weighted-average number of common shares outstanding during the period. Undistributed earnings (loss) are allocated proportionally to Class A and Class B stockholders as both classes are entitled to share equally, on a per share basis, in dividends and other distributions. Diluted earnings (loss) per share is computed by dividing net income (loss) by the weighted-average number of common shares outstanding during the period, while giving effect to all potentially dilutive common shares to the extent they are dilutive. Potentially dilutive common shares result from the assumed vesting of RSUs under the 2022 Plan, using the “treasury stock” method. RSUs are not included in the computation of diluted earnings (loss) per share if the effect of their inclusion would have been anti-dilutive. Refer to Note 7 *Earnings (Loss) per Share* as well as Note 6 *Equity*, for further discussion on awards.

Concentration of credit risk

Financial instruments that potentially subject the Company to a concentration of credit risk consist primarily of cash and cash equivalents, which include: short-term deposits, money market funds, U.S. government bonds, derivative financial instruments, and also trade accounts receivable.

The majority of the Company’s cash and cash equivalents are invested in banks domiciled in the U.S. and Europe, as well as in Israel. Generally, these cash equivalents may be redeemed upon demand. Short term bank deposits are held in the aforementioned banks. The money market funds consist of institutional investors money market funds and are readily redeemable to cash and the U.S. government bonds are also highly liquid. Derivative financial instruments are forward contracts entered into with major banks in Israel to hedge the Company’s foreign exchange rate risk. Accordingly, management believes that these bank deposits, money market funds, U.S. government bonds and derivative financial instruments have minimal credit risk.

The Company’s accounts receivable are derived primarily from sales to Tier 1 suppliers to the automotive manufacturing industry located mainly in the U.S., Europe, and China. Concentration of credit risk with respect to accounts receivable is mitigated by credit limits, ongoing credit evaluation, and account monitoring procedures. Credit is granted based on an evaluation of a customer’s financial condition and, generally, collateral is not required. Trade accounts receivable are typically due from customers within 30 to 60 days.

MOBILEYE GLOBAL INC.
NOTES TO CONSOLIDATED FINANCIAL STATEMENTS

The Company performs ongoing credit evaluations of its customers and has not experienced any material losses in the periods presented. The Company recognizes an allowance for credit losses for any potential uncollectible amounts. The allowance is based on various factors, including historical experience, the age of the accounts receivable balances, credit quality of the customers, and other reasonable and supportable information. This allowance consists of an amount based on overall estimated exposure for the receivable portfolio and amounts identified for specific customers. Expected credit losses are recorded as general and administrative expenses in the Company's consolidated statement of operations and comprehensive income. As of December 28, 2024 and December 30, 2023, the credit loss allowance for trade accounts receivable was not material. For each of the years presented, the charge-offs and recoveries in relation to the credit losses were not material.

Customer concentration risk

The Company's business, results of operations, and financial condition for the foreseeable future will likely continue to depend on sales to a relatively small number of customers. In the future, these customers may decide not to purchase the Company's products, may purchase fewer products than in previous years, or may alter their purchasing patterns. Further, the amount of revenue attributable to any single customer or customer concentration generally may fluctuate in any given period. In addition, a decline in the production levels of one or more of the Company's major customers, particularly with respect to vehicle models for which the Company is a significant supplier, could reduce revenue. The loss of one or more key customers, a reduction in sales to any key customer or the Company's inability to attract new significant customers could negatively impact revenue and adversely affect the Company's business, results of operations, and financial condition. See Note 12 *Segment Information* related to customers that accounted for more than 10% of the Company's total revenue and more than 10% of the total accounts receivable balance for each of the years presented in these consolidated financial statements.

Dependence on a single supplier or limited suppliers risk

The Company purchases all its System on Chip ("EyeQ™ SoC") from a single supplier. For certain materials, equipment, and services, we, and/or our suppliers and vendors, rely on a single or a limited number of direct and indirect suppliers and vendors. Any issues that occur and persist in connection with the manufacture, delivery, quality, or cost of the assembly and testing of inventory could adversely effect the Company's business, results of operations and financial condition. See below regarding a shortage in EyeQ™ SoCs that the Company experienced during 2021 and 2022 and may experience in the future, including in ECUs for SuperVision™ and other components for our products.

Supply chain risk

During the fiscal years 2021 and 2022, the semiconductor industry experienced widespread shortages of substrates and other components and available foundry manufacturing capacity. During 2021 and 2022, STMicroelectronics, our sole supplier of EyeQ™ SoCs, was not able to meet our demand for EyeQ™ SoCs, causing a significant reduction in the Company's inventory levels. Starting in late 2022 and early 2023, such supply disruptions, raw material shortages and manufacturing limitations abated and during 2023, we successfully increased levels of EyeQ™ SoC inventory on hand, mitigating the potential for future supply constraints to cause a shortfall. However, in the event of a reoccurrence of supply chain constraints, and subject to the duration and severity thereof, we may be required to operate with minimal or no inventory of EyeQ™ SoCs or ECUs (including for Mobileye SuperVision™, Mobileye Chauffeur™, and Mobileye Drive™) on hand. As a result, we are substantially reliant on timely shipments of EyeQ™ SoCs from STMicroelectronics and ECUs from Quanta Computer (or other suppliers) to fulfill customer orders and if such a shortfall of chips or ECUs were to occur, we may be unable to offset future supply constraints through the use of inventory on hand. Since our EyeQ™ SoC is the core of our ADAS and autonomous driving solutions, continued, acute shortages in the supply of sufficient EyeQ™ SoCs to meet our production needs would impair our ability to meet our customers' requirements in a timely manner, and would affect our business, results of operations, and financial condition potentially in an adverse manner.

MOBILEYE GLOBAL INC.
NOTES TO CONSOLIDATED FINANCIAL STATEMENTS

New Accounting pronouncements*Accounting pronouncements adopted in the period*

In November 2023, the FASB issued ASU 2023-07 *Segment Reporting (Topic 280): Improvements to Reportable Segment Disclosures*. The ASU improves reportable segments disclosure requirements, primarily through enhanced disclosures about significant segment expenses. The ASU is effective for fiscal years beginning after December 15, 2023, and interim periods within fiscal years beginning after December 15, 2024. Early adoption is permitted. This ASU did not have a material impact on the Company's consolidated financial statements.

Accounting Pronouncements effective in future periods

In December 2023, the FASB issued ASU 2023-09 *Improvements to Income Tax Disclosures*. The ASU improves the transparency of income tax disclosures by requiring (1) consistent categories and greater disaggregation of information in the rate reconciliation and (2) income taxes paid disaggregated by jurisdiction. It also includes certain other amendments to improve the effectiveness of income tax disclosures. For public business entities, the ASU is effective for annual periods beginning after December 15, 2024. The Company is evaluating the potential impact of this guidance on its consolidated financial statements.

In November 2024, the FASB issued ASU 2024-03 *Income Statement - Reporting Comprehensive Income - Expense Disaggregation Disclosure (Subtopic 220-40): Disaggregation of Income Statement Expense and ASU 2025-01, Income Statement - Reporting Comprehensive Income - Expense Disaggregation Disclosures (Subtopic 220-40): Clarifying the Effective Date*. The ASU improves the disclosures about a public business entity's expenses and provides more detailed information about the types of expenses in commonly presented expense captions. The amendments require that at each interim and annual reporting period an entity will, inter alia, disclose amounts of purchases of inventory, employee compensation, depreciation and amortization included in each relevant expense caption (such as cost of sales, general and administrative, and research and development). The ASU is effective for annual reporting periods beginning after December 15, 2026, and interim periods within annual reporting periods beginning after December 15, 2027. Early adoption is permitted. The Company is evaluating the potential impact of this guidance on its consolidated financial statement disclosures.

Total property and equipment, gross	\$ 586	\$ 544
Less: accumulated depreciation	(128)	(97)
Total property and equipment, net	\$ 458	\$ 447

Depreciation expenses totaled \$62 million, \$39 million, and \$23 million for the years ended December 28, 2024, December 30, 2023, and December 31, 2022, respectively. During 2024 and 2023, the Company derecognized the cost and accumulated depreciation of fully depreciated assets in the amount of \$30 million and \$23 million, respectively.

Substantially all of the Company's property and equipment were located in Israel as of December 28, 2024 and December 30, 2023.

Royalty bearing agreements

The Company has entered into a number of license and technology transfer agreements with third parties. The agreements allow the Company to utilize and leverage the third parties' technology in order to integrate it into the Company's products. In consideration thereof, the Company is obligated to pay royalties to each of the third parties, for each unit of the applicable integrated product sold to other parties. As a result, during the years ended December 28, 2024, December 30, 2023, and December 31, 2022, the Company recorded expenses of approximately \$7 million, \$9 million, and \$8 million, respectively. These expenses were classified as a component of cost of revenue.

NOTE 4 EMPLOYEE BENEFITS

In Israel

Severance

Israeli labor laws generally require severance payments upon dismissal of an employee or upon termination of employment in certain other circumstances. The following plans relate to the Company's employees in Israel.

Severance pay liability with respect to Israeli employees is calculated pursuant to Israeli Severance Pay Law based on the most recent salary of the employees, multiplied by the number of years of employment as of the period-end date. The Company records an expense for the increase in its severance liability, net of earnings (losses) from the related severance pay funds. The liabilities are presented on an undiscounted basis and included on the consolidated balance sheets as a long-term employee benefit. Severance pay liabilities as of December 28, 2024 and December 30, 2023 were \$62 million and \$56 million, respectively.

MOBILEYE GLOBAL INC.
NOTES TO CONSOLIDATED FINANCIAL STATEMENTS

The Company's liability for all of its Israeli employees is covered by monthly deposits with severance pay funds. The value of the deposited funds is based on the cash surrender value of these policies and includes earnings (or losses) accumulated through the balance sheet date. The deposited funds may be withdrawn only upon the fulfillment of the obligations pursuant to Israeli Severance Pay Law or labor agreements. Severance pay funds, which are included in other long-term assets, were \$52 million and \$45 million as of December 28, 2024 and December 30, 2023, respectively.

The majority of the Company's liability for severance pay is covered by the provisions of Section 14 of the Israeli Severance Pay Law ("Section 14"). Under Section 14, employees are entitled to monthly deposits, at a rate of 8.33% of their monthly salary, contributed by the Company on their behalf to their insurance funds. Payments by the Company in accordance with Section 14 release the Company from any future severance payments in respect of those employees. As a result, the Company does not recognize any liability for severance pay due to these employees under Section 14 and the related deposits are not recorded as assets on the consolidated balance sheets.

Non-Israeli Defined Contribution Plans

Most of the Company's non-Israeli subsidiaries provide defined contribution plans for the benefit of their employees. The plans primarily provide for Company matching contributions based upon a percentage of the employees' contributions. The Company's contributions for each of the years presented under such plans were not material.

NOTE 5 LEASES

The Company's operating leases consist of offices and vehicles and the lease term varies between 3-8 years. Some of the Company's leases include options to extend the lease term for periods of up to five years each. For purposes of calculating lease liabilities, lease terms include options to extend or terminate the lease when it is reasonably certain that the Company will exercise such options.

Lease expenses for operating lease payments are recognized on a straight-line basis over the lease term. Certain operating leases provide for annual increases to lease payments based on an index. The Company calculates the present value of future lease payments based on the index at the lease commencement date. Differences between the estimated lease liability and actual payments are expensed as incurred and are not material for all periods presented. The lease agreements generally do not contain any residual value guarantees or restrictive covenants.

Operating lease expense for the years ended December 28, 2024, December 30, 2023, and December 31, 2022 were \$16 million, \$19 million, and \$13 million, respectively. The Company does not have any finance leases.

The balances for the operating leases, which are presented on the consolidated balance sheets in other long-term assets, other current liabilities and long-term liabilities, were as follows:

U.S. dollars in millions	As of	
	December 28, 2024	December 30, 2023
Operating lease right-of-use assets	\$ 47	\$ 49
Operating lease liabilities:		
Current portion of lease liabilities	13	12
Long-term lease liabilities	37	39
Total operating lease liabilities	\$ 50	\$ 51

As of December 28, 2024 and December 30, 2023, the weighted average remaining lease term was 4.31 and 4.67 years, respectively, and the weighted average discount rate was 4.94% and 4.67%, respectively.

Supplemental information related to operating leases was as follows:

MOBILEYE GLOBAL INC.
NOTES TO CONSOLIDATED FINANCIAL STATEMENTS

U.S. dollars in millions	Year ended		
	December 28, 2024	December 30, 2023	December 31, 2022
Operating cash outflows from operating leases	\$ 16	\$ 16	\$ 12
Right-of-use assets recognized in exchange for lease obligations	\$ 13	\$ 8	\$ 48

Maturities of operating lease liabilities were as follows:

U.S. Dollars in millions	December 28, 2024
2025	\$ 15
2026	13
2027	10
2028	9
2029 and thereafter	8
Total operating lease payments	55
Imputed interest	(5)
Present value of lease liabilities	\$ 50

During 2017, the Company obtained the right to use land in Jerusalem from the Israeli government for the construction of a new research and development and innovation center that now hosts the Company’s headquarters (the new Jerusalem Campus). This land lease was fully prepaid and no lease liability was recorded. This operating lease right of use asset is carried at cost and amortized using the straight-line method. This operating lease right of use asset, net of amortization, was \$11 million and \$12 million as of December 28, 2024 and December 30, 2023, respectively, and is included in other long-term assets on the consolidated balance sheets.

NOTE 6 EQUITY

1. Common Stock and Voting Rights

We have two classes of authorized common stock: Class A common stock, which is listed on Nasdaq under the symbol “MBLY”, and Class B common stock which is not listed or traded on any stock exchange and is held by Intel. Both classes of common stock have a par value of \$0.01 per share. The rights of the holders of our Class A common stock and Class B common stock are identical, except with respect to voting, transfer, and conversion rights. Each share of our Class A common stock is entitled to one vote. Each share of our Class B common stock is entitled to ten votes and is convertible at any time into one share of our Class A common stock, subject to certain conditions. Intel continues to directly, or indirectly, hold all of the Class B common stock of Mobileye, which represents approximately 87.7% of our outstanding common stock and 98.6% of the voting power of our common stock as of December 28, 2024.

2. Dividends

On May 12, 2022, Mobileye Group declared and paid a dividend in an aggregate amount of \$336 million to Intel, net of \$14 million of cash paid to tax authorities to settle related tax obligations.

In October 2022, the Company made a capital distribution in cash to Intel in the amount of \$1.1 million.

3. Share-based compensation plans

Mobileye Plan

In connection with the Mobileye IPO, the Company approved the Mobileye Global Inc. 2022 Equity Incentive Plan (the “2022 Plan”). Equity awards under the 2022 Plan are granted for Class A shares and vest upon the satisfaction of a service-based vesting condition, mostly over a service periods of three years. The RSUs granted during 2024, 2023 and 2022 also include 0.5 million, 0.4 million and 2.1 million RSUs granted to the Company’s Chief Executive Officer, in a total value of \$14 million, \$14 million and \$44 million, respectively, which will vest over a service period of up to five years.

MOBILEYE GLOBAL INC.
NOTES TO CONSOLIDATED FINANCIAL STATEMENTS

With respect to Israeli employees, the 2022 Plan is designed to grant awards pursuant to the provision of Section 102 of the Israeli Income Tax Ordinance. In accordance with the capital gains treatment elected by the Company, the Company is not allowed for tax purposes to deduct the amounts credited to employees. This includes amounts recorded as salary benefits in the Company's consolidated financial statements, in respect of equity granted to employees under the 2022 Plan, with the exception of the benefit component, if any, on the grant date.

Restricted Stock Units

The RSU activity for the years ended December 28, 2024, December 30, 2023 and December 31, 2022 for RSUs granted to the Company's employees under the 2022 Plan was as follows:

	<u>Number of RSUs</u> <u>In thousands</u>	<u>Weighted average grant</u> <u>date fair value per share</u> <u>U.S. dollars</u>
Outstanding as of December 25, 2021	—	\$ —
Granted	12,570	21
Forfeited	(6)	21
Outstanding as of December 31, 2022	12,564	21
Granted	6,782	40
Vested	(4,240)	21
Forfeited	(328)	26
Outstanding as of December 30, 2023	14,778	30
Granted	13,542	25
Vested	(5,574)	29
Forfeited	(1,293)	30
Outstanding as of December 28, 2024	21,453	\$ 27

As of December 28, 2024, the unrecognized compensation cost related to all unvested RSUs granted under the Company's 2022 Plan, was \$405 million, which is expected to be recognized as expense over a weighted-average period of 2.07 years.

Intel Plan

Prior to the Mobileye IPO, since 2017, employees of the Company had been incentivized and rewarded through the grant of Intel equity awards under the Intel Corporation 2006 Equity Incentive Plan (the "2006 Plan").

The 2006 Plan provides for the grant of equity awards covering Intel common stock to eligible employees of the Company and contain only a service condition. The equity awards granted generally vest over the course of three years from the grant date.

With respect to Israeli employees, the 2006 Plan is designed to grant awards pursuant to the provision of Section 102 of the Israeli Income Tax Ordinance. In accordance with the capital gains treatment elected by the Company, the Company is not allowed for tax purposes to deduct the amounts credited to employees. This includes amounts recorded as salary benefits in the Company's consolidated financial statements, in respect of equity granted to employees under the 2006 Plan, with the exception of the benefit component, if any, on the grant date.

MOBILEYE GLOBAL INC.
NOTES TO CONSOLIDATED FINANCIAL STATEMENTS

Options

Outstanding and exercisable options for Intel's common stock under Intel's 2006 Plan as of December 28, 2024 were as follows:

Exercise price U.S. dollars	Outstanding			Exercisable	
	Number of options	Weighted average remaining contractual life	Weighted average exercise price	Number of options	Weighted average exercise price
	In thousands	In years	U.S. dollars	In thousands	U.S. dollars
\$ 4.0 - 21.6	58	1.1	\$ 5.7	55	\$ 4.7
Total	58	1.1	\$ 5.7	55	\$ 4.7

The option activity for the years ended December 28, 2024, December 30, 2023, and December 31, 2022 for options granted to Company's employees for Intel's common stock was as follows:

	Number of options	Weighted average remaining contractual life	Weighted average exercise price	Aggregated intrinsic value(1)
	In thousands	In years	U.S. dollars	U.S. dollars in millions
Options outstanding as of December 25, 2021	3,578	1.5	\$ 29.2	\$ 79
Exercised	(1,308)	—	32.8	—
Options outstanding as of December 31, 2022	2,270	0.8	27.1	1
Exercised	(36)	—	22.3	—
Expired	(2,099)	—	26.9	—
Options outstanding as of December 30, 2023	135	1.0	31.7	3
Exercised	(6)	—	23.7	—
Expired	(71)	—	53.6	—
Options outstanding as of December 28, 2024	58	1.1	\$ 5.7	\$ 1
Options exercisable as of December 28, 2024	55	1.1	\$ 4.7	\$ 1

(1) The aggregate intrinsic value is calculated as the difference between the exercise price of the underlying awards and the closing stock price of Intel's common stock. On December 28, 2024, December 30, 2023, and December 31, 2022, the Intel share prices were \$20.30, \$50.25, and \$26.43, respectively. This represents the potential pre-tax amount receivable by the option holders had all option holders exercised their options as of such date.

(2) The remaining options expected to vest as of December 28, 2024 were 3 thousand options with an average weighted exercise price of \$21.6.

**MOBILEYE GLOBAL INC.
NOTES TO CONSOLIDATED FINANCIAL STATEMENTS**

RSUs

The RSU activity for the years ended December 28, 2024, December 30, 2023, and December 31, 2022 for RSUs granted to Company's employees for Intel's common stock was as follows:

	Number of RSUs	Weighted average grant
	In thousands	date fair value per share U.S. dollars
Outstanding as of December 25, 2021	5,278	\$ 46.5
Granted	3,758	43.7
Vested	(2,935)	45.9
Forfeited	(409)	48.1
Outstanding as of December 31, 2022	5,692	44.8
Vested	(2,690)	45.0
Forfeited	(291)	46.1
Outstanding as of December 30, 2023	2,711	44.4
Vested	(2,228)	44.7
Forfeited	(124)	44.1
Outstanding as of December 28, 2024	359	\$ 42.8

Unrecognized expenses

As of December 28, 2024, the unrecognized compensation cost related to stock options and RSUs granted under the Intel 2006 Plan was \$7 million, which will be recognized over a weighted average period of 0.47 years.

Share-based compensation expense summary (for both Mobileye and Intel Plans)

Expenses recognized

Share-based compensation expenses included in the consolidated statements of operations and comprehensive income (loss) were as follows:

U.S. dollars in millions	Year ended		
	December 28, 2024	December 30, 2023	December 31, 2022
Cost of revenue	\$ 2	\$ 2	\$ 2
Research and development, net	244	212	153
Sales and marketing	6	7	5
General and administrative	27	31	14
Total share-based compensation	\$ 279	\$ 252	\$ 174

NOTE 7 EARNINGS (LOSS) PER SHARE

Before the Mobileye IPO, Intel held directly or indirectly 100 shares of common stock of Mobileye, with a par value of \$0.01 per share, that were issued and outstanding. Immediately prior to the Mobileye IPO, those 100 shares of common stock held by Intel were reclassified into 100 shares of Class B common stock with a par value of \$0.01 per share. Concurrently, we issued to Intel an additional 749,999,900 shares of our Class B common stock pursuant to an agreement with Intel. Accordingly, as of the completion of the Mobileye IPO, we had 750,000,000 Class B shares, all held by Intel. Per ASC 260-10-55-12, this share amount is being retroactively utilized for the calculation of basic and diluted earnings (loss) per share ("EPS") for periods prior to the Mobileye IPO.

MOBILEYE GLOBAL INC.
NOTES TO CONSOLIDATED FINANCIAL STATEMENTS

In connection with the Mobileye IPO, we issued 41,000,000 shares of our Class A common stock to the public at a public offering price of \$21.00 per share and an additional 4,761,905 Class A shares at a private placement. The Mobileye IPO closed on October 28, 2022. On November 1, 2022, we closed the sale of an additional 6,150,000 shares pursuant to the exercise of the underwriters' over-allotment option. In accordance with ASC 260, the Class A shares issued in connection with the Mobileye IPO are included in earnings (loss) per share calculations for periods subsequent to the closing of the Mobileye IPO and are not included in the earnings (loss) per share calculations for periods prior to the closing of the Mobileye IPO.

On June 12, 2023, we completed the Secondary Offering, pursuant to which 38,500,000 shares of Class B common stock held by Intel were converted into an equal number of shares of Class A common stock. Accordingly, as of December 28, 2024, we have 711,500,000 Class B shares, all held by Intel, and 100,226,477 Class A shares, both of which are utilized for the calculation of basic and diluted EPS. The outstanding Class A shares also include shares issued upon vesting of outstanding RSUs, see note 6.

For the years ended December 28, 2024, December 30, 2023 and December 31, 2022, the computation of diluted earnings (loss) per share attributable to common stockholders does not include 18.1 million, 5.9 million and 0.8 million potential common shares, respectively, related to restricted stock units granted under the 2022 Plan to the Company's employees, as the effect of their inclusion would have been anti-dilutive.

The following table summarizes the calculation of basic and diluted earnings (loss) per share for the periods presented:

In millions, except per share amounts	Year ended		
	December 28, 2024	December 30, 2023	December 31, 2022
Numerator:			
Net income (loss)	\$ (3,090)	\$ (27)	\$ (82)
Denominator:			
Weighted average common shares - basic and diluted	809	805	759
Earnings (loss) per share:			
Basic and diluted	\$ (3.82)	\$ (0.03)	\$ (0.11)

NOTE 8 INCOME TAXES

Income (Loss) before income taxes included in the consolidated statements of operations and comprehensive income (loss)

U.S. dollars in millions	Year ended		
	December 28, 2024	December 30, 2023	December 31, 2022
Income (loss) before taxes:			
U.S	\$ (11)	\$ (13)	\$ (49)
Non-U.S	(3,152)	29	17
Total income (loss) before income taxes	\$ (3,163)	\$ 16	\$ (32)

Benefit (provision) for income taxes included in the consolidated statements of operations and comprehensive income (loss)

Benefit (provision) for income taxes for the years ended December 28, 2024, December 30, 2023, and December 31, 2022 was comprised of the following:

MOBILEYE GLOBAL INC.
NOTES TO CONSOLIDATED FINANCIAL STATEMENTS

U.S. dollars in millions	Year ended		
	December 28, 2024	December 30, 2023	December 31, 2022
Current income taxes:			
U.S.	\$ —	\$ —	\$ —
Non-U.S.	(28)	(58)	(67)
Total current provision for income taxes	(28)	(58)	(67)
Deferred income taxes:			
U.S.	54	(28)	(28)
Non-U.S.	47	43	45
Total deferred benefit (provision) for income taxes	101	15	17
Total benefit (provision) for income taxes	\$ 73	\$ (43)	\$ (50)

Effective income tax rate reconciliation

The difference between the tax provision at the statutory federal income tax rate and the benefit (provision) for income taxes as a percentage of loss before income taxes (effective tax rate) for each year was as follows:

	Year ended		
	December 28, 2024	December 30, 2023 %	December 31, 2022
Statutory federal income tax rate	21.0	21.0	21.0
Increase (reduction) in rate resulting from:			
Foreign rate differential	2.0	2.7	(1.2)
Technology incentives – current	0.1	(568.7)	312.7
Technology incentives – deferred	(3.1)	461.5	(230.6)
U.S. branch taxation of foreign operations	1.7	243.9	(127.3)
Changes in uncertain tax position, net	(0.2)	42.1	16.1
Share-based compensation related adjustments	—	(2.4)	(0.5)
Changes in valuation allowance	(0.3)	43.1	(151.9)
Non-deductible expenses and other	(0.1)	25.4	(6.5)
Withholding taxes, net of credit	—	—	12.1
Goodwill impairment*	(18.8)	—	—
Effective tax rate	2.3	268.6	(156.1)

* The US tax impacts of the goodwill impairment is reflected in the U.S. branch taxation of foreign operations line item while the goodwill impairment line item reflects the Israeli tax impact.

In the fiscal years ended 2024, 2023 and 2022, certain Israeli operations are taxable in the U.S. as branch activities due to restructuring activities prior to Mobileye IPO. As a result, these operations are taxed both in the U.S. and locally in Israel. For U.S. tax purposes, due to cumulative losses, deferred tax assets have not been benefited which results in a residual tax provision associated with a deferred tax liability recorded for goodwill. Such deferred tax liability was reduced in 2024 due to goodwill impairment recorded for the Mobileye reporting unit, resulting in a tax benefit recorded in 2024.

The decrease in the effective tax rate for the year ended December 28, 2024, as compared to the year ended December 30, 2023, is mainly due to the deferred tax effects of goodwill impairment to the Mobileye reporting unit, as well as loss before income taxes compared to profit before income taxes in prior year, and an increase in unbenefited U.S. deferred tax assets subject to a valuation allowance.

In Israel, the Company benefits from a reduced tax rate under the Special Preferred Technological Enterprise status under the Law for the Encouragement of Capital Investments, 1959, or the Investment Law.

MOBILEYE GLOBAL INC.
NOTES TO CONSOLIDATED FINANCIAL STATEMENTS

Under the Investment Law, income derived by Preferred Companies from ‘Special Preferred Technological Enterprises’ (as defined in the 2017 Amendment), would be subject to 6% tax rate on income deriving from intellectual property, subject to a number of conditions being fulfilled, including a minimal amount or ratio of annual research and development expenditures and research and development employees, as well as having at least 25% of annual income derived from exports. Special Preferred Technological Enterprise is defined as an enterprise which meets the aforementioned conditions and for which total consolidated revenue of its parent company and all subsidiaries are more than ILS 10 billion.

Deferred income taxes

Deferred income taxes reflect the net tax effects of temporary differences between the carrying amounts of assets and increase in unbenefited U.S. deferred tax assets subject to a valuation allowance.

Due to the fact that certain Israeli operations were taxable in the U.S. as branch activities, the Company recognized in the years ended December 28, 2024 and December 30, 2023 the tax effects of temporary differences between the carrying amount of assets and liabilities for financial reporting purposes and the amounts used for U.S. income tax purposes which resulted in a net deferred tax liability after evaluation of deferred tax assets for realizability.

Significant components of the Company’s deferred tax assets and deferred tax liabilities were as follows:

U.S. dollars in millions	December 28, 2024	December 30, 2023
Deferred tax assets:		
Share-based compensation	\$ 119	\$ 105
Provisions for employee benefits	12	8
Net operating losses carryforward	147	103
Research and development expenses	631	455
Operating lease liabilities	11	12
Foreign tax credit and deferrals	5	13
Intangible assets	202	179
Other	6	15
Gross deferred tax assets	1,133	890
Valuation allowance	(1,007)	(579)
Total deferred tax assets	126	311
Deferred tax liabilities:		
Intangible assets	(99)	(126)
Goodwill	(63)	(322)
Right of use assets	(10)	(11)
Other	(1)	—
Total deferred tax liabilities	(173)	(459)
Net deferred tax liabilities	\$ (47)	\$ (148)

Changes in valuation allowance for deferred tax assets were as follows:

U.S. dollars in millions	Year ended		
	December 28, 2024	December 30, 2023	December 31, 2022
Valuation allowance at beginning of year	\$ 579	\$ 533	\$ 229
Change in valuation allowance	428	46	304
Valuation allowance at end of year	\$ 1,007	\$ 579	\$ 533

MOBILEYE GLOBAL INC.
NOTES TO CONSOLIDATED FINANCIAL STATEMENTS

Realization of deferred tax assets is based on the Company’s judgment and various factors including reversal of deferred tax liabilities, the ability to generate future taxable income in jurisdictions where such assets have arisen, and potential tax planning strategies. A valuation allowance is recorded in order to reduce the deferred tax assets to the amount expected to be realized in the future. The valuation allowance for the years presented are primarily related to U.S. branch deferred tax assets not currently expected to be realized given that the Company has sustained recent losses based on the separate return method.

For purposes of these financial statements, the income tax expense and deferred tax balances have been prepared as if the Company filed income tax returns on the separate return method. As of December 28, 2024, the Company has U.S. net operating loss carryforwards of \$144 million, subject to separate return limitation year rules, which were generated before the Company joined its Parent’s consolidated income tax return on July 17, 2021. The Company also has \$316 million of separate return method net operating loss carryforwards that were generated after joining its Parent’s consolidated income tax filing group which have been utilized by its Parent. These net operating losses generated by the Company that have been utilized as part of the Parent consolidated income tax return filings but have not been utilized by the Company under the separate return method approach, have been reflected in these consolidated financial statements because the Company will recognize a benefit for the separate return method net operating losses when determined to be realizable.

The Company has a non-U.S. net operating loss carryforward of \$213 million as of December 28, 2024. This net operating loss carryforward amount relates primarily to operations in Israel and has an indefinite carry-forward period.

The Company intends to indefinitely reinvest undistributed foreign earnings into foreign operations and expects future U.S. cash generated to be sufficient to meet future U.S. cash needs. Therefore, the Company has not provided for deferred income taxes on undistributed foreign earnings. In making this determination, the Company evaluates both near-term and long-term fiscal needs of its U.S. domestic operations and its foreign subsidiaries. The estimation of the unrecognized deferred tax liability on undistributed foreign earnings is not practicable for the consolidated balance sheets dates presented.

Uncertain tax positions

A reconciliation of the beginning and ending amount of unrecognized tax benefits related to uncertain tax positions was as follows:

U.S. dollars in millions	Year ended		
	December 28, 2024	December 30, 2023	December 31, 2022
Balance at the beginning of the year	\$ 7	\$ —	\$ 4
Changes in balances related to tax positions taken during current period	6	7	—
Settlements with taxing authorities	—	—	—
Lapse of statute of limitations	—	—	(4)
Balance at the end of the year	\$ 13	\$ 7	\$ —

If the remaining balance of unrecognized tax benefits were recognized in a future period, it would result in a tax benefit of \$13 million as of December 28, 2024. The balance of uncertain tax positions, which also includes accrued penalties and interest, is included in other long-term liabilities on the consolidated balance sheets. There are no material changes anticipated in the uncertain tax positions in the next twelve months.

The Company files income tax returns in the U.S., Israel, and in other certain foreign jurisdictions. The Company is no longer subject to U.S. and Israeli tax examinations for years prior to 2021 and 2020, respectively.

MOBILEYE GLOBAL INC.
NOTES TO CONSOLIDATED FINANCIAL STATEMENTS

NOTE 9 RELATED PARTY TRANSACTIONS

The Company has entered into a series of related party arrangements with Intel. The arrangements were as follows:

1. Stock Compensation Recharge Agreement

The Company entered into a stock compensation recharge agreement with Intel, which requires the Company to reimburse Intel for certain amounts, net of any related withholding tax, relating to the value of share-based compensation provided to the Company's employees for RSUs or stock options exercisable in Intel stock. The reimbursement amounts recorded as an adjustment to additional paid-in capital (and to parent net investment prior to the Mobileye IPO) in the consolidated statement of changes in equity were \$0 million, \$100 million and \$118 million for the years ended December 28, 2024, December 30, 2023 and December 31, 2022, respectively. As for the inclusion of the Company's employees in Intel's equity incentive plan, see Note 6.

2. Hedging services

Intel centrally hedges its exposure to changes in foreign exchange rates. At the beginning of 2021, the Company entered into a hedging services agreement with Intel, pursuant to which the Company was entitled to a certain allocation of the gains and obligated to a certain allocation of the losses arising from the execution of the hedging contracts. In October 2022, we de-designated our outstanding hedge instruments and ceased participation in the hedging services agreement with Intel. As of October 25, 2022, the Company is no longer a party to this agreement. For further information, see Note 2, *Significant Accounting Policies* related to Derivatives and hedging.

3. Lease agreements

Under lease agreements with Intel, the Company leases office space in Intel's buildings. The costs are included in the consolidated statements of operations and comprehensive income (loss) primarily on a specific and direct attribution basis, as described in Note 2. The leasing costs for the years ended December 28, 2024, December 30, 2023 and December 31, 2022 were \$3 million, \$4 million and \$3 million, respectively.

4. Other services to a related party

The Company reimbursed its Chief Executive Officer for reasonable travel related expenses incurred while conducting business on behalf of the Company as well as paid for certain security related costs. For the years ended December 28, 2024, December 30, 2023, and December 31, 2022, travel related reimbursements and security related costs were \$2.0 million, \$1.8 million and \$1.1 million, respectively.

5. Reorganization and the Mobileye IPO

In connection with the Mobileye IPO, which was completed in October 2022, we have consummated the following transactions and agreements.

Equity transaction in connection with the legal purchase of Moovit entities

On May 31, 2022, we entered into an agreement with Intel pursuant to which we legally purchased from Intel 100% of the issued and outstanding equity interests of the Moovit entities for an aggregate amount of \$900 million that was paid in December 2022 to Intel using cash that we concurrently received from Intel's payment of such amount it owed us under the Bilateral Loan Arrangements. Moovit's operations were already reflected as part of the Mobileye Group as further detailed in Note 1 and, therefore the transaction was treated within equity.

MOBILEYE GLOBAL INC.
NOTES TO CONSOLIDATED FINANCIAL STATEMENTS

Dividend Note

On April 21, 2022, Intel and Mobileye Group signed a loan agreement whereby Mobileye Group issued a promissory note to Intel in an aggregate principal amount of \$3.5 billion (the “Dividend Note”). The Dividend Note was scheduled to mature on April 21, 2025 and accrued interest at a rate equal to 1.26% per annum, such interest to accrue quarterly. Prior to June 30, 2024, such interest would be paid by being automatically added to the outstanding principal amount of the loan and would thereafter be payable quarterly in cash in arrears and shall also be payable upon any prepayment, whether in whole or in part, to the extent accrued on the amount being prepaid and upon maturity. Under the Dividend Note, Mobileye Group had the right, at its option, on any business day, to prepay the loan, including principal and any accrued interest thereon, in whole or in part without premium or penalty. In November 2022, the Company used approximately \$0.9 billion out of the net proceeds from the Mobileye IPO to repay a portion of the indebtedness under the Dividend Note and Intel has contributed to the Company the remaining portion of the Dividend Note (plus related accrued interest) in the amount of \$2.6 billion such that no amounts under the Dividend Note remain owed by us to Intel as of December 31, 2022. Interest expense recognized by the Company totaled \$24 million for the year ended December 31, 2022.

Contribution and Subscription Agreement

In connection with the Mobileye IPO, we entered into the Contribution and Subscription Agreement with Intel, pursuant to which Intel transferred to Mobileye Global Inc., collectively as a contribution on existing capital in exchange for 749,999,900 shares of our Class B common stock: (i) 100% of the equity interests of Cyclops Holdings Corporation, such that Cyclops Holdings Corporation became a direct, wholly owned subsidiary of Mobileye Global Inc.; and (ii) the Dividend Note with respect to any principal and accrued interest thereon in excess of the principal amount that we repaid out of the net proceeds that we received from the Mobileye IPO and the Concurrent Private Placement. After the completion of the Mobileye IPO and the Concurrent Private Placement, no amounts under the Dividend Note remain owed by us to Intel. The actual amount of the Dividend Note which was repaid was based upon the amount of net proceeds from the Mobileye IPO that were available after we retained the required \$1.0 billion of cash, cash equivalents, or marketable securities that Intel agreed to ensure that we had immediately after completion of the IPO under the Master Transaction Agreement.

Intercompany Agreements

In connection with the Mobileye IPO, the Company entered into certain intercompany agreements (collectively, the “Intercompany Agreements”), including a Master Transaction Agreement, an Administrative Services Agreement, an Employee Matters Agreement, a Technology and Services Agreement, a LiDAR Product Collaboration Agreement, and a Tax Sharing Agreement, in each case with Intel and certain of its subsidiaries, to outline a framework for the Company’s ongoing relationship with Intel, whereby, among other matters, Intel will continue to provide certain administrative and operational services, including the supply and license of certain technologies, whereby the Company will supply Intel with certain technologies, and whereby Intel’s and the Company’s respective rights, responsibilities and obligations with respect to all tax matters will be governed (including tax liabilities, tax attributes, tax returns and tax audits). The Intercompany Agreements became effective as of the completion of the Mobileye IPO. See below for further detail.

Administrative Services Agreement

Under the Administrative Services Agreement, Intel provides the Company with administrative and other services. The Company pays fees to Intel for the services rendered based on pricing per service agreed between the Company and Intel.

The initial term of the Administrative Services Agreement expires two years from the completion of the Mobileye IPO and extends automatically for successive three-month terms unless one of the parties elects not to renew. We have the right to terminate any of the services provided by Intel under the Administrative Services Agreement at any time upon thirty days prior written notice of termination to Intel, or if Intel fails to perform any of its material obligations under the Administrative Services Agreement and such failure continues for at least thirty days after receipt by Intel of written notice of such failure from Mobileye.

The costs incurred under this agreement for the years ended December 28, 2024, December 30, 2023 and December 31, 2022 were \$3 million, \$4 million and \$3 million, respectively.

MOBILEYE GLOBAL INC.
NOTES TO CONSOLIDATED FINANCIAL STATEMENTS

Technology and Services Agreement

The Technology and Services Agreement provides a framework for the collaboration on technology projects and services between the Company and Intel (“Technology Projects”), and sets out the licenses granted by each party to its respective technology for the conduct of the Technology Projects, provisions relating to the ownership of certain existing technology, the allocation of rights in any new technology created in the course of the Technology Projects, and certain provisions applicable to the development of a certain radar product of the Company. The Technology and Services Agreement does not apply to projects for the development and manufacture of a lidar sensor system for automobiles, which the LiDAR Product Collaboration Agreement previously covered. Pursuant to the Technology and Services Agreement, the Company and Intel will agree to statements of work with additional terms for Technology Projects.

The Technology and Services Agreement has a term of two years, and automatically renews for one-year renewal periods, unless the agreement is terminated for a party’s material breach, a party’s bankruptcy or insolvency, or advance notice of non-renewal is given. The amount incurred under this agreement for the years ended December 28, 2024, December 30, 2023 and December 31, 2022 were \$4 million, \$5 million and \$0.4, respectively.

LiDAR Product Collaboration Agreement

The LiDAR Product Collaboration Agreement provided the terms that applied to the Company’s collaboration with Intel for the development and manufacture of a Lidar sensor system for ADAS and AV in automobiles (“LiDAR Project”). On some of the LiDAR programs, joint funding would have applied between Intel and Mobileye until the end of 2027 whereby Mobileye would have borne its own Lidar sensor system development costs up to the first \$40 million per year and Intel would have borne up to \$20 million per year of Mobileye’s Lidar sensor system development costs that were greater than \$40 million per year.

The LiDAR Product Collaboration Agreement further provided that Intel would manufacture certain components for the Company to market and sell as part of a FMCW (frequency-modulated continuous wave) Lidar sensor system solely for external environment sensing for ADAS and AV in automobiles.

The price for the components Intel would have manufactured for the Company would have been based on a cost-plus model. In addition, the agreement included a profit-sharing model under which Mobileye would pay Intel a share of the gross profit for each Lidar sensor system or components thereof, based on Intel technology, sold by Mobileye.

On September 9, 2024, Mobileye announced the cessation of further internal development of FMCW lidar and the wind down of the Lidar R&D Unit. In connection with Mobileye’s decision, Mobileye and Intel terminated the LiDAR Product Collaboration Agreement as of October 2, 2024.

There were no amounts received or receivable from Intel under this agreement for the years ended December 28, 2024 and December 30, 2023.

Tax Sharing Agreement

The Tax Sharing Agreement establishes the respective rights, responsibilities and obligations of the Company and Intel after the completion of the Mobileye IPO with respect to tax matters, including the amount of cash the Company will pay to Intel for its share of the tax liability owed on the consolidated filings in which the Company or any of the Company’s subsidiaries are included, including audit or other tax proceedings. According to the terms of the Tax Sharing Agreement, the Company and Intel will calculate and agree to estimated amounts owed quarterly but final amounts will also be calculated and paid upon consolidated tax return filings. Amounts payable under the Tax Sharing Agreement will be recorded in the same manner as other contractual obligations entered into by the Company. On August 14, 2024, Mobileye and Intel entered into an Amended and Restated Tax Sharing Agreement, which incorporated certain clarifying amendments into the original Tax Sharing Agreement. As of December 28, 2024 and December 30, 2023, the related party payable to Intel, pursuant to the Tax Sharing Agreement, was \$3 million and \$37 million, respectively. The decrease was due to finalizing 2023 amounts upon filing of the US consolidated tax return with Intel.

MOBILEYE GLOBAL INC.
NOTES TO CONSOLIDATED FINANCIAL STATEMENTS

6. Intel sublicense

In June 2024, Intel and its affiliates, including Mobileye, were granted a sublicense to certain patents relating to network-on-chip and other technologies (the “Sublicense”). In connection with Mobileye’s use of the Sublicense, Intel and Mobileye agreed that Mobileye would pay to Intel \$0.3 million as Mobileye’s allocation of the consideration paid by Intel for the Sublicense.

NOTE 10 GOODWILL

The following table presents the carrying amount of goodwill by segment as of December 28, 2024 and December 30, 2023.

U.S. dollars in millions	Mobileye	Other	Total
December 30, 2023	\$ 10,784	\$ 111	\$ 10,895
Impairment	(2,695)	—	(2,695)
December 28, 2024	<u>\$ 8,089</u>	<u>\$ 111</u>	<u>\$ 8,200</u>

During the third quarter of 2024, the Company performed an interim quantitative goodwill impairment analysis for the “Mobileye” reporting unit, due to a recent decline (from August) in the price of the Company’s Class A common stock, and corresponding market capitalization, as well as macroeconomic and industry factors. The quantitative assessment was performed by measuring the reporting unit’s fair value (which substantially constitutes the entire value of the Company) using the income approach, based on the expected present value of estimated future cash flows.

The fair value measurement is categorized as Level 3 within the fair value hierarchy due to the use of unobservable inputs such as financial projections, terminal growth rate, and discount rate. The results of the impairment analysis indicated that the carrying value of the Mobileye reporting unit was in excess of its fair value. Therefore, the Company has recorded a non-cash impairment loss of \$2,695 million (\$2,613 million, net of tax), under “goodwill impairment” in the Consolidated Statements of Operations.

During the fourth quarter of 2024, we completed our annual impairment assessment. Based on the assessment, the fair value of the “Mobileye” reporting unit exceeds its book value. We also performed a detailed quantitative analysis for the “Other” reporting unit which showed that no impairment was required. Fair value was estimated using the expected present value of future cash flows and is categorized as Level 3 within the fair value hierarchy due to the use of unobservable inputs.

The Company did not record any impairment of goodwill in 2023 and 2022.

NOTE 11 IDENTIFIED INTANGIBLE ASSETS

U.S. dollars in millions	As of					
	December 28, 2024			December 30, 2023		
	Gross Assets	Accumulated Amortization	Net	Gross Assets	Accumulated Amortization	Net
Developed technology	\$ 3,705	\$ 2,384	\$ 1,321	\$ 3,705	\$ 2,008	\$ 1,697
Customer relationships & brands	786	498	288	786	430	356
Total	<u>\$ 4,491</u>	<u>\$ 2,882</u>	<u>\$ 1,609</u>	<u>\$ 4,491</u>	<u>\$ 2,438</u>	<u>\$ 2,053</u>

Amortization expenses recorded for developed technology and customer relationships and brands were recorded in cost of revenue and sales and marketing, respectively, in the consolidated statements of operations and comprehensive income (loss) for each year presented.

During the third quarter of 2024, we performed an impairment assessment of intangible assets and concluded that the sum of the expected future undiscounted cash flows expected to be generated by the intangible assets is substantially above their carrying amount and therefore no impairment was identified. The Company did not record any impairment of intangible assets for any of the periods presented.

MOBILEYE GLOBAL INC.
NOTES TO CONSOLIDATED FINANCIAL STATEMENTS

The following table presents the amortization expenses recorded for these identified intangible assets and their weighted average useful lives:

U.S. dollars in millions	Year ended			Weighted Average Useful Life
	December 28, 2024	December 30, 2023	December 31, 2022	
Developed technology	\$ 376	\$ 406	\$ 469	10
Customer relationships & brands	68	68	75	12
Total amortization expenses	\$ 444	\$ 474	\$ 544	

The Company expects future amortization expenses for the next five years and thereafter to be as follows:

U.S. dollars in millions	2025	2026	2027	2028	2029	Thereafter	Total
Future amortization expenses	\$ 443	\$ 332	\$ 179	\$ 176	\$ 131	\$ 348	\$ 1,609

NOTE 12 SEGMENT INFORMATION

An operating segment is defined as a component of an enterprise for which discrete financial information is available and is reviewed regularly by the Chief Operating Decision Maker (“CODM”), or decision-making group, to evaluate performance and make operating decisions. The Company has identified its CODM as the Chief Executive Officer (“CEO”).

The Company’s organizational structure and management reporting supports two operating segments: Mobileye and Moovit. The CODM evaluates performance, makes operating decisions and allocates resources based on the financial data of these operating segments. Operating segments do not record inter-segment revenue. Mobileye is presented as a reportable operating segment and Moovit, which is a mobility-as-a-service company, is presented within “Other” as per ASC 280, Segment Reporting.

Segment performance is the operating income (loss) reported excluding the amortization of acquisition-related intangible assets and impairment of goodwill. The CODM uses segment performance to allocate resources (including employees and financial resources) to segments in the annual budget and forecasting process and also uses that measure to assess the segment performance. The measure of assets has not been disclosed for each segment as it is not regularly provided to the CODM.

The accounting policies of the individual segments are the same as those described in the *Significant Accounting Policies* in Note 2.

The following is segment results for each year:

U.S. dollars in millions	Year ended December 28, 2024			
	Mobileye	Other	Amounts not allocated to segments profit or loss	Consolidated
Revenues	\$ 1,613	\$ 41	\$ —	\$ 1,654

Percent of total accounts receivables balance		
Customer A	35 %	44 %
Customer B	23 %	10 %
Customer C	13 %	22 %

NOTE 13 INVESTMENTS

Debt Investments

Debt investments include U.S. government bonds and money market funds. U.S. government bonds are for original maturities of up to six months and are classified as available for sale and measured at fair value with the related unrealized gains and losses included in other comprehensive income (expense), net. Money market funds, measured at fair value, consist of institutional investors money market funds and are readily redeemable to cash.

The following tables summarize the Company's marketable debt securities:

U.S. dollars in millions	December 28, 2024						
	Amortized cost	Unrealized gain	Unrealized loss	Fair value	Reported as		
					Cash and cash equivalents	Other current assets	
U.S. government bonds	\$ 33	\$ —	\$ —	\$ 33	\$ —	\$ 33	
Money market funds	951	—	—	951	951	—	
Total	\$ 984	\$ —	\$ —	\$ 984	\$ 951	\$ 33

Total	\$ 932	\$ —	\$ —	\$ 932	\$ 932	\$ —	

MOBILEYE GLOBAL INC.
NOTES TO CONSOLIDATED FINANCIAL STATEMENTS

Equity Investments

Marketable equity securities

During the second quarter of 2024, we purchased marketable equity investments in the amount of \$10 million, which were classified within other current assets and measured at fair value. During the fourth quarter of 2024, we sold all of the marketable equity investments. Realized gains recorded in other financial income (expense), net for the year ended December 28, 2024 amounted to \$3 million.

Non-marketable equity securities

In 2024, the Company entered into a series of investment agreements with a privately held company, pursuant to which the Company agreed to purchase up to \$25 million of Preferred Stock. In October 2024, the Company purchased \$10 million of Preferred Stock in the privately held company. The Company's obligation to purchase additional Preferred Stock at subsequent closings is subject to the terms of the applicable Preferred Stock investment agreements.

The investment does not provide the Company the ability to control or have significant influence over the operations of the privately held company. We have accounted for the investment using the measurement alternative because the securities are not publicly traded and do not have a readily determinable fair value. Under the measurement alternative, the equity investment is initially recorded at its cost, but the carrying value may be adjusted through earnings upon an impairment or when there is an observable price change involving the same or a similar investment with the same issuer. As of December 28, 2024, we recorded \$10 million for our investment as other long-term assets. There was no impairment or other change to the value of the investment as of December 28, 2024.

NOTE 14 CONTINGENCIES

U.S. Class Action

On January 16, 2024, a putative class action captioned *McAuliffe v. Mobileye Global Inc., et al.*, 1:24-CV-00310 (S.D.N.Y.), was filed in the United States District Court for the Southern District of New York against Mobileye and certain of its current and former officers. Following the consolidation of the action with a substantively identical case, *Le v. Mobileye Global Inc., et al.*, 1:24-CV-01390 (S.D.N.Y.), and the appointment of a lead plaintiff, an amended complaint was filed on September 13, 2024. In response to the defendants' motion to dismiss, filed on October 25, 2024, lead plaintiff filed a second amended complaint on November 22, 2024. The second amended complaint asserts violations of Sections 10(b) and 20(a) of the Securities Exchange Act of 1934 in connection with defendants' alleged misstatements and omissions concerning the build-up of excess inventory by certain Tier 1 Mobileye customers, and seeks unspecified damages and other relief on behalf of all persons and entities who purchased or otherwise acquired Mobileye securities between January 26, 2023 and August 8, 2024. The second amended complaint also includes claims asserted by an additional plaintiff under Sections 11 and 15 of the Securities Act of 1933 on behalf of putative purchasers of Mobileye Class A common stock offered in Mobileye's June 5, 2023 secondary public offering. Mobileye and the individual defendants filed a motion to dismiss the second amended complaint on December 20, 2024. We intend to defend the matter vigorously. No provision was recorded in the financial statements as of December 28, 2024.

U.S. Derivative Action

On April 12, 2024, a derivative lawsuit was filed against the members of the Mobileye Board of Directors and Intel Corporation, in its capacity as Mobileye's controlling shareholder. Mobileye was also named as a nominal defendant. The complaint principally asserts claims for breach of fiduciary duty and unjust enrichment based on alleged failures to take steps to prevent the Company from making allegedly false and misleading statements concerning the build-up of excess inventory by certain Tier 1 Mobileye customers. The complaint also asserts a claim for violation of Section 14(a) of the Securities Exchange Act of 1934 based on alleged misstatements and omissions in Mobileye's 2023 proxy statement. The complaint seeks unspecified damages and other relief. Since May 24, 2024, the derivative action has been stayed by the court pending resolution of the anticipated motion to dismiss in the consolidated securities action.

**MOBILEYE GLOBAL INC.
NOTES TO CONSOLIDATED FINANCIAL STATEMENTS**

On June 27, 2024, an additional derivative lawsuit was filed in the United States District Court for the Southern District of New York against certain members of the Mobileye Board of Directors, certain of Mobileye's current and former officers, and Intel Corporation, in its capacity as Mobileye's controlling shareholder. Mobileye was also named as a nominal defendant. On July 9, 2024, this derivative action was consolidated with the derivative action originally filed on April 12, 2024 and the consolidated derivative action was stayed by the court pending resolution of the anticipated motion to dismiss in the consolidated securities action. We intend to defend the derivative claims vigorously. No provision for the consolidated derivative action was recorded in the financial statements as of December 28, 2024.

NOTE 15 SUBSEQUENT EVENTS

Share-based compensation

In January 2025, the Company's Chief Executive Officer approved, pursuant to the authority delegated by the compensation committee, the issuance of restricted stock units to be issued under our 2022 Equity Incentive Plan. The total aggregate fair value of RSUs granted was \$7.5 million, which constituted 476 thousand RSUs, which will vest over a service period of three years.

Item 9. Changes in and Disagreements With Accountants on Accounting and Financial Disclosures

[None.]

Item 9A. Controls and Procedures

Disclosure Controls and Procedures

As of the end of the period covered by this report, management conducted an evaluation, under the supervision and with the participation of our Chief Executive Officer and Chief Financial Officer, of the effectiveness of our disclosure controls and procedures (as defined in Rules 13a-15(e) and 15d-15(e) under the Exchange Act). Based on this evaluation, our Chief Executive Officer and Chief Financial Officer concluded that our disclosure controls and procedures are effective to ensure that information required to be disclosed by us in reports that we file or submit under the Exchange Act is recorded, processed, summarized and reported within the time periods specified in the SEC's rules and forms, and to ensure that information required to be disclosed by us in the reports we file or submit under the Exchange Act is accumulated and communicated to management, including our principal executive and principal financial officers, as appropriate, to allow timely decisions regarding required disclosures.

Changes in Internal Control Over Financial Reporting

There were no changes in the Company's internal control over financial reporting that occurred during the quarter ended December 28, 2024 that have materially affected, or are reasonably likely to materially affect, our internal control over financial reporting.

Limitations on the Effectiveness of Controls

Our disclosure controls and procedures and internal control over financial reporting are designed to provide reasonable assurance of achieving their objectives as specified above. Because of its inherent limitations, disclosure controls and procedures and internal control over financial reporting may not prevent or detect misstatements. Also, projections of any evaluation of effectiveness to future periods are subject to the risk that controls may become inadequate because of changes in conditions, or that the degree of compliance with the policies or procedures may deteriorate. A control system, no matter how well conceived and operated, can provide only reasonable, not absolute, assurance that the objectives of the control system will be attained. Further, no evaluation of controls can provide absolute assurance that misstatements due to error or fraud will not occur or that all control issues and instances of fraud, if any, within the Company have been detected.

Management's Report on Internal Control over Financial Reporting

Our management is responsible for establishing and maintaining adequate internal control over financial reporting (as defined in Rules 13a-15(f) and 15d-15(f) under the Exchange Act) to provide reasonable assurance regarding the reliability of our financial reporting and the preparation of consolidated financial statements for external purposes in accordance with US GAAP.

Management assessed our internal control over financial reporting as of December 28, 2024. Management based its assessment on criteria established in Internal Control-Integrated Framework issued by the Committee of Sponsoring Organizations of the Treadway Commission (2013 framework). Management's assessment included evaluation of elements such as the design and operating effectiveness of key financial reporting controls, process documentation, accounting policies, and our overall control environment.

Based on this assessment, management has concluded that our internal control over financial reporting was effective as of December 28, 2024 to provide reasonable assurance regarding the reliability of financial reporting and the preparation of consolidated financial statements for external reporting purposes in accordance with US GAAP. We reviewed the results of management's assessment with the Audit Committee of our Board of Directors.

The effectiveness of the Company's internal control over financial reporting as of December 28, 2024 has been audited by Kesselman & Kesselman, Certified Public Accountants (Isr.), a member firm of PricewaterhouseCoopers International Limited, an independent registered public accounting firm, as stated in their report which appears herein.

Item 9B. Other Information

During the three months ended December 28, 2024, none of our directors or executive officers adopted or terminated any contract, instruction or written plan for the purchase or sale of Mobileye securities that was intended to satisfy the affirmative defense conditions of Rule 10b5-1(c) or any “non-Rule 10b5-1” trading arrangement. Further, during the three months ended December 28, 2024, the Company did not adopt or terminate any contract, instruction or written plan for the purchase or sale of Mobileye securities that was intended to satisfy the affirmative defense conditions of Rule 10b5-1(c) or any “non-Rule 10b5-1” trading arrangement.”

Item 9C. Disclosure Regarding Foreign Jurisdictions That Prevent Inspections

Not applicable.

Part III

Item 10. Directors, Executive Officers and Corporate Governance.

The information required to be disclosed by this item is incorporated herein by reference to the 2025 Proxy Statement, which we expect to file with the SEC within 120 days after the end of our fiscal year ended December 28, 2024.

We maintain insider trading policies and procedures governing the purchase, sale, and/or other dispositions of our company's securities by directors, officers, and employees that we believe are reasonably designed to promote compliance with insider trading laws, rules, and regulations, as well as Nasdaq listing standards. A copy of our insider trading policy is filed as exhibit 19.1 to our Annual Report on Form 10-K.

Item 11. Executive Compensation.

The information required to be disclosed by this item is incorporated herein by reference to the 2025 Proxy Statement, which we expect to file with the SEC within 120 days after the end of our fiscal year ended December 28, 2024.

Item 12. Security Ownership of Certain Beneficial Owners and Management and Related Stockholder Matters.

The information required to be disclosed by this item is incorporated herein by reference to the 2025 Proxy Statement, which we expect to file with the SEC within 120 days after the end of our fiscal year ended December 28, 2024.

Item 13. Certain Relationships and Related Transactions, and Director Independence.

The information required to be disclosed by this item is incorporated herein by reference to the 2025 Proxy Statement, which we expect to file with the SEC within 120 days after the end of our fiscal year ended December 28, 2024.

Item 14. Principal Accounting Fees and Services.

The information required to be disclosed by this item is incorporated herein by reference to the 2025 Proxy Statement, which we expect to file with the SEC within 120 days after the end of our fiscal year ended December 28, 2024.

Part IV

Item 15. Exhibits, Financial Statement Schedules

(a) The following documents are filed as a part of this report:

(1) Financial Statements - See Part II, Item 8. "Financial Statements and Supplementary Data" of this report.

(2) Financial Statement Schedules - All financial statement schedules are omitted because they are not applicable or the required information is shown in the financial statements or the notes thereto.

(3) Exhibits - The following is a list of exhibits filed or furnished as part of this report or incorporated by reference herein to exhibits previously filed with the Securities and Exchange Commission.

Table of Contents

**MOBILEYE GLOBAL INC.
2022 EQUITY INCENTIVE PLAN**

RESTRICTED STOCK UNIT AGREEMENT

1. Terms of Restricted Stock Unit. This Restricted Stock Unit Agreement, including any appendix attached hereto (this Restricted Stock Unit Agreement and such appendix, together, this “**Agreement**”), the Restricted Stock Unit Notice of Grant delivered online by logging into the E*TRADE Financial Corporation website (or the website of the applicable vendor as may be in effect from time to time) (the “**Notice of Grant**”) and the Mobileye Global Inc. 2022 Equity Incentive Plan (the “**2022 Plan**”), as such may be amended from time to time, constitute the entire understanding between you, Mobileye Global Inc. (the “**Corporation**”) and the Subsidiary that employs you or you provide services for (the “**Employer**”), regarding the Restricted Stock Units (“**RSUs**”) identified in your Notice of Grant. The RSUs granted to you are effective as of the grant date set forth in the Notice of Grant (the “**Grant Date**”). If there is any conflict between the terms in this Agreement and the 2022 Plan, the terms of the 2022 Plan will prevail. Capitalized terms not explicitly defined in this Agreement or in the Notice of Grant but defined in the 2022 Plan will have the same definitions as in the 2022 Plan.

2. Acceptance. If you are instructed by the administrators of the 2022 Plan to accept this Agreement and you fail to do so in the manner specified by the administrators within the earlier of (i) the first vest date or (ii) 180 days following the Grant Date, the RSUs identified in your Notice of Grant will be cancelled, except as otherwise determined by the Corporation in its sole discretion.

3. Vesting of RSUs. Provided that you remain continuously employed by, or continuously provide services to, the Corporation or a Subsidiary from the Grant Date specified in the Notice of Grant through each vesting date specified in the Notice of Grant, the RSUs allocated to each vesting date will vest and be converted into the right to receive the number of shares of the Corporation’s Common Stock, \$0.01 par value (the “**Common Stock**”), except as otherwise provided in this Agreement. In the event a vesting date for any RSUs falls on a weekend or any other day on which the applicable stock exchange or national market system upon which the Common Stock is traded (“**Exchange**”) is not open, such RSUs will vest on the vesting date specified in the Notice of Grant, but the Market Value (as defined in the 2022 Plan) of such vested RSUs, including for purposes of tax withholding and reporting, will be determined as of the next following Exchange trading day; provided, however, that if you are designated by the Board of Directors to be an “officer” as defined in Rule 16a-1(f) of the Securities Exchange Act of 1934 (a “**Section 16 Officer**”), the foregoing shall not apply, and your affected RSUs’ will vest on the next following Exchange trading day and the Market Value of such vested RSUs will be determined as of the date the RSUs vested. The number of shares of Common Stock into which RSUs convert as specified in the Notice of Grant will be adjusted for stock splits and similar matters as specified in and pursuant to the 2022 Plan.

RSUs will vest to the extent provided in and in accordance with the terms of the Notice of Grant and this Agreement. If your status as an employee, Consultant or Outside Director terminates for any reason except death or Disablement (defined below), prior to the vesting dates set forth in your Notice of Grant, your unvested RSUs will be cancelled.

4. Conversion into Common Stock. Shares of Common Stock will be issued or become free of restrictions as soon as practicable following vesting of the RSUs, provided that you have satisfied your tax withholding obligations as specified under Section 9 of this Agreement and you have completed, signed and returned any documents and taken any additional action that the Corporation deems appropriate to enable it to accomplish the delivery of the shares of Common Stock. The shares of Common Stock will be issued in your name (or may be issued to your executor or personal representative, in the event of your death or Disablement), and may be effected by recording shares on the stock records of the Corporation or by crediting shares in an account

established on your behalf with a brokerage firm or other custodian, in each case as determined by the Corporation. In no event will the Corporation be obligated to issue a fractional share.

Notwithstanding the foregoing, (i) the Corporation will not be obligated to deliver any shares of the Common Stock during any period when the Corporation determines that the conversion of a RSU or the delivery of shares hereunder would violate any laws of the United States or your country of residence and/or employment and/or may issue shares subject to any restrictive legends that, as determined by the Corporation's counsel, is necessary to comply with securities or other regulatory requirements, and (ii) the date on which shares are issued may include a delay in order to provide the Corporation such time as it determines appropriate to address tax withholding and other administrative matters.

5. Suspension or Termination of RSU for Misconduct. If at any time the Committee of the Board of Directors established pursuant to the 2022 Plan (the "**Committee**"), including any Subcommittee or "Authorized Officer" (as defined in Section 8(b)(vi) of the 2022 Plan) notifies the Corporation that they reasonably believe that you have committed an act of misconduct as described in Section 8(b)(vi) of the 2022 Plan (embezzlement, fraud, dishonesty, nonpayment of any obligation owed to the Corporation or any Subsidiary, breach of fiduciary duty or deliberate disregard of Corporation rules resulting in loss, damage or injury to the Corporation or any Subsidiary, an unauthorized disclosure of any Corporation trade secret or confidential information, any conduct constituting unfair competition, inducing any customer to breach a contract with the Corporation or any Subsidiary or inducing any principal for whom the Corporation or any Subsidiary acts as agent to terminate such agency relationship), the vesting of your RSUs may be suspended pending a determination of whether an act of misconduct has been committed. If the Corporation determines that you have committed an act of misconduct, all RSUs not vested as of the date the Corporation was notified that you may have committed an act of misconduct will be cancelled and neither you nor any beneficiary will be entitled to any claim with respect to the RSUs whatsoever. Any determination by the Committee or an Authorized Officer with respect to the foregoing will be final, conclusive, and binding on all interested parties.

6. Termination of Employment/Service. Except as expressly provided otherwise in this Agreement, if your employment by, or service with, the Corporation or any Subsidiary terminates for any reason, whether voluntarily or involuntarily, other than on account of death or Disablement (as defined in Section 8), all RSUs not then vested will be cancelled on the date of such termination, regardless of whether such termination is as a result of a divestiture or otherwise. For purposes of this Section 6, your employment or service with any partnership, joint venture or corporation not meeting the requirements of a Subsidiary in which the Corporation or a Subsidiary is a party will be considered employment or service for purposes of this provision if either (a) the entity is designated by the Committee as a Subsidiary for purposes of this provision or (b) you are specifically designated as an employee, Consultant or Outside Director of a Subsidiary for purposes of this provision.

For purposes of this provision, your employment or service is not deemed terminated if, prior to 60 days after the date of termination from the Corporation or a Subsidiary, you are rehired by the Corporation or a Subsidiary on a basis that would make you eligible for future RSU grants by the Corporation. In addition, your transfer from the Corporation to any Subsidiary or from any one Subsidiary to another, or from a Subsidiary to the Corporation is not deemed a termination of employment or service.

7. Death. Except as expressly provided otherwise in this Agreement, if you die while employed by, or providing services to, the Corporation or any Subsidiary, your RSUs will become 100% vested.

8. Disablement. Except as expressly provided otherwise in this Agreement, if your employment or service terminates as a result of Disablement, your RSUs will become 100% vested upon the later of the date of your termination due to your Disablement or the date of determination of your Disablement. For purposes of this Agreement, "**Disablement**" will mean a physical condition arising from an illness or injury, which renders you

incapable of performing work in your regular occupation, as determined by the Corporation. Your regular occupation is the occupation you routinely perform at the time your Disablement began.

9. Tax Withholding.

(a) To the extent RSUs are subject to tax withholding obligations, the taxable amount generally will be based on the Market Value on the date of the taxable event. RSUs are taxable in accordance with the existing or future tax laws of the country or countries in which you are subject to tax such as the country or countries in which you reside and/or are employed on the Grant Date, vest dates, or during the vesting period. Your RSUs may be taxable in more than one country, based on your country of citizenship and/or the countries in which you resided or were employed on the Grant Date, vest date or during the vesting or other relevant period.

(b) You will make arrangements satisfactory to the Corporation (or the Subsidiary that employs you, if your Subsidiary is involved in the administration of the 2022 Plan) for the payment and satisfaction of any income tax, social security tax, payroll tax, social taxes, applicable national or local taxes, or payment on account of other tax related to withholding obligations that arise by reason of granting or vesting of RSUs or sale of Common Stock shares from vested RSUs (whichever is applicable).

(c) The Corporation will not be required to issue or lift any restrictions on shares of the Common Stock pursuant to your RSUs or to recognize any purported transfer of shares of the Common Stock until such obligations are satisfied.

(d) Unless provided otherwise by the Committee, these obligations will be satisfied by the Corporation withholding a number of shares of Common Stock that would otherwise be issued under the RSUs that the Corporation determines has a Market Value sufficient to meet the maximum tax withholding obligations in all relevant jurisdictions, reduced by the amount of any withholding obligation you have already satisfied by cash payment to the Corporation. In the event that the Committee provides that these obligations will not be satisfied under the method described in the previous sentence, you authorize E*TRADE Financial Corporate Services, Inc. and E*TRADE Securities LLC (“E*Trade”), or any successor plan administrator, to sell a number of shares of Common Stock that are issued under the RSUs, which the Corporation determines is sufficient to generate an amount that meets the tax withholding obligations plus additional shares to account for rounding and market fluctuations, and to pay such tax withholding to the Corporation for remittance to the appropriate tax authorities. The shares may be sold as part of a block trade with other Participants in which all Participants receive an average price.

(e) You are ultimately liable and responsible for all taxes owed by you in connection with your RSUs, regardless of any action the Corporation takes or any transaction pursuant to this Section 9 with respect to any tax withholding obligations that arise in connection with the RSUs. The Corporation makes no representation or undertaking regarding the treatment of any tax withholding in connection with the grant, issuance, vesting or settlement of the RSUs or the subsequent sale of any of the shares of Common Stock underlying the RSUs that vest. The Corporation does not commit and is under no obligation to structure the RSU program to reduce or eliminate your tax liability.

10. Rights as Stockholder. Your RSUs may not be otherwise sold, assigned, conveyed, gifted, pledged, hypothecated or otherwise transferred in any manner, other than by will or the laws of descent and distribution or as permitted by Rule 701 of the Securities Act of 1933. Any attempt to transfer, assign, hypothecate or otherwise dispose of your RSUs other than as permitted above, will be void and unenforceable against the Corporation.

You will have the rights of a stockholder only after shares of the Common Stock have been issued to you following vesting of your RSUs and satisfaction of all other conditions to the issuance of those shares as set forth in this Agreement. RSUs will not entitle you to any rights of a stockholder of Common Stock and there are no voting or dividend rights with respect to your RSUs. RSUs will remain terminable pursuant to this Agreement at all times until they vest and convert into shares. As a condition to having the right to receive shares of Common Stock pursuant to your RSUs, you acknowledge that unvested RSUs will have no value for purposes of any aspect of your employment or service relationship with the Corporation or a Subsidiary.

11. **Disputes.** Any question concerning the interpretation of this Agreement, your Notice of Grant, the RSUs or the 2022 Plan, any adjustments required to be made thereunder, and any controversy that may arise under this Agreement, your Notice of Grant, the RSUs or the 2022 Plan will be determined by the Committee (including any person(s) to whom the Committee has delegated its authority) in its sole and absolute discretion. Such decision by the Committee will be final and binding unless determined pursuant to Section 14(f) to have been arbitrary and capricious.

12. **Amendments.** The 2022 Plan and RSUs may be amended or altered by the Committee or the Board of Directors to the extent provided in the 2022 Plan.

13. **Data Privacy.** *You explicitly and unambiguously consent to the collection, use and transfer, in electronic or other form, of your personal data as described in this document and any other RSU grant materials (“Data”) by and among, as applicable, the Corporation, the Employer and any other Subsidiary for the exclusive purpose of implementing, administering and managing your participation in the 2022 Plan.*

*You hereby understand that the Corporation holds certain personal information about you, including, but not limited to, your name, home address and telephone number, date of birth, social insurance number or other identification number, salary, nationality, job title, any shares of stock or directorships held in the Corporation, details of all RSUs or any other entitlement to shares of stock awarded, canceled, exercised, vested, unvested or outstanding in your favor for the purpose of implementing, administering and managing the 2022 Plan. You hereby understand that Data will be transferred to E*Trade and any other third parties assisting in the implementation, administration and management of the 2022 Plan, that these recipients may be located in your country or elsewhere, and that the recipient’s country (e.g., the United States) may have different data privacy laws and protections than your country. You hereby understand that you may request a list with the names and addresses of any potential recipients of the Data by contacting your local human resources representative. You authorize the Corporation, E*Trade and any other possible recipients to receive, possess, use, retain and transfer the Data, in electronic or other form, for the exclusive purpose of implementing, administering and managing your participation in the 2022 Plan, including any requisite transfer of such Data as may be required to another broker or other third party with whom you may elect to deposit any shares of Common Stock acquired under your RSUs. You hereby understand that Data will be held only as long as is necessary to implement, administer and manage your participation in the 2022 Plan. You hereby understand that you may, at any time, view Data, request additional information about the storage and processing of Data, require any necessary amendments to Data or refuse or withdraw the consents herein, in any case without cost, by contacting in writing your local human resources representative.*

Further, you understand that you are providing the consents herein on a purely voluntary basis. If you do not consent, or if you later seek to revoke your consent, your employment status or service with the Employer will not be affected; the only consequence of refusing or withdrawing your consent is that the Corporation would not be able to grant you RSUs or other equity awards or administer or maintain such awards. Therefore, you hereby understand that refusing or withdrawing your consent may affect your ability to participate in the 2022 Plan. For more information on the consequences of your refusal to consent or withdrawal

of consent, you hereby understand that you may contact the human resources representative responsible for your country at the local or regional level.

Finally, upon request of the Corporation or the Employer, you agree to provide an executed data privacy consent form (or any other agreements or consents) that the Corporation and/or the Employer may deem necessary to obtain from you for the purpose of administering your participation in the 2022 Plan in compliance with the data privacy laws in your country, either now or in the future. You understand and agree that you will not be able to participate in the 2022 Plan if you fail to provide any such consent or agreement requested by the Corporation and/or the Employer.

14. The 2022 Plan and Other Terms.

(a) Any prior agreements, commitments or negotiations concerning the RSUs are superseded by this Agreement and your Notice of Grant. You hereby acknowledge that a copy of the 2022 Plan has been made available to you.

(b) The grant of RSUs to an employee, Consultant or Outside Director in any one year, or at any time, does not obligate the Corporation or any Subsidiary to make a grant in any future year or in any given amount and should not create an expectation that the Corporation or any Subsidiary might make a grant in any future year or in any given amount.

(c) In connection with an initial offering of the Corporation's Shares pursuant to a registration statement filed by the Corporation with the Securities and Exchange Commission and upon request of the Corporation or the underwriters managing such offering of the Corporation's securities, Participant hereby agrees not to sell, make any short sale of, loan, grant any option for the purchase of, or otherwise dispose of any securities of the Corporation however or whenever acquired (other than those included in the registration) without the prior written consent of the Corporation or such underwriters, as the case may be, for such period of time (not to exceed 180 days) from the effective date of such registration as may be requested by the Corporation or such managing underwriters and to execute an agreement reflecting the foregoing as may be requested by the underwriters at the time of the Corporation's initial public offering. Notwithstanding the foregoing, if during the last 17 days of the restricted period, the Corporation issues an earnings release or material news or a material event relating to the Corporation occurs, or prior to the expiration of the restricted period the Corporation announces that it will release earnings results during the 16-day period beginning on the last day of the restricted period, then, upon the request of the managing underwriter, to the extent required by any Financial Industry Regulatory Authority rules, the restrictions imposed by this subsection shall continue to apply until the end of the third trading day following the expiration of the 15-day period beginning on the issuance of the earnings release or the occurrence of the material news or material event. In no event will the restricted period extend beyond 216 days after the effective date of the registration statement.

(d) Notwithstanding any other provision of this Agreement, if any changes in law or the financial or tax accounting rules applicable to the RSUs covered by this Agreement will occur, the Corporation may, in its sole discretion, (i) modify this Agreement to impose such restrictions or procedures with respect to the RSUs (whether vested or unvested), the shares issued or issuable pursuant to the RSUs and/or any proceeds or payments from or relating to such shares as it determines to be necessary or appropriate to comply with applicable law or to address, comply with or offset the economic effect to the Corporation of any accounting or administrative matters relating thereto, or (ii) cancel and cause a forfeiture with respect to any unvested RSUs at the time of such determination.

(e) Nothing contained in this Agreement creates or implies an employment contract or term of employment upon which you may rely.

(f) Because this Agreement relates to terms and conditions under which you may be issued shares of Common Stock, an essential term of this Agreement is that it will be governed by the laws of the State of Delaware, without regard to choice of law principles of Delaware or other jurisdictions. Any action, suit, or proceeding relating to this Agreement or the RSUs granted hereunder will be brought in the state or federal courts of competent jurisdiction in the State of Delaware.

(g) Notwithstanding anything to the contrary in this Agreement or the applicable Notice of Grant, the Corporation reserves the right to reduce your RSUs if there is a change in your employment classification from a full-time employee to a part-time employee, or from a full-time employee to a Consultant or Outside Director.

(h) RSUs are not part of your employment or service contract (if any) with the Corporation or any Subsidiary, your salary or fees, your normal or expected compensation, or other remuneration for any purposes, including for purposes of computing severance pay or other termination compensation or indemnity.

(i) In consideration of the grant of RSUs, no claim or entitlement to compensation or damages will arise from termination of your RSUs or diminution in value of the RSUs or Common Stock acquired through vested RSUs resulting from termination of your active employment by the Corporation or any Subsidiary (for any reason whatsoever and whether or not in breach of local labor laws) and you hereby release the Corporation and its Subsidiaries from any such claim that may arise; if, notwithstanding the foregoing, any such claim is found by a court of competent jurisdiction to have arisen, then you will be deemed irrevocably to have waived your entitlement to pursue such claim.

(j) Notwithstanding any terms or conditions of the 2022 Plan to the contrary, in the event of involuntary termination of your employment (whether or not in breach of local labor laws), your right to receive the RSUs and vest in RSUs under the 2022 Plan, if any, will terminate effective as of the date that you are no longer actively employed and will not be extended by any notice period mandated under local law (e.g., active employment would not include a period of “garden leave” or similar period pursuant to local law); furthermore, in the event of involuntary termination of employment (whether or not in breach of local labor laws), your right to sell shares of Common Stock that converted from vested RSUs after termination of employment, if any, will be measured by the date of termination of your active employment and will not be extended by any notice period mandated under local law.

(k) Notwithstanding any provision of this Agreement, the Notice of Grant or the 2022 Plan to the contrary, if, at the time of your termination of employment with the Corporation or any of its Subsidiaries, you are a “specified employee” as defined in Section 409A of the Internal Revenue Code (“Code”), and one or more of the payments or benefits received or to be received by you pursuant to the RSUs would constitute deferred compensation subject to Section 409A, no such payment or benefit will be provided under the RSUs until the earliest of (A) the date which is six (6) months after your “separation from service” for any reason, other than death or “disability” (as such terms are used in Section 409A(a)(2) of the Code), (B) the date of your death or “disability” (as such term is used in Section 409A(a)(2)(C) of the Code) or (C) the effective date of a “change in the ownership or effective control” of the Corporation (as such term is used in Section 409A(a)(2)(A)(v) of the Code). Each payment under this Agreement shall be treated as a separate payment for purposes of Section 409A of the Code. The RSUs are intended to comply with or be exempt from the applicable requirements of Section 409A of the Code and shall be limited, construed and interpreted in accordance with such intent; provided, that the Corporation does not guarantee you any particular tax treatment of the RSUs. In addition, if any provision of the RSUs would

cause you to incur any penalty tax or interest under Section 409A of the Code or any regulations or Treasury guidance promulgated thereunder, the Corporation may reform such provision to maintain to the maximum extent practicable the original intent of the applicable provision without violating the provisions of Section 409A of the Code. In no event whatsoever shall the Corporation be liable for any additional tax, interest or penalties that may be imposed on you by Section 409A of the Code or any damages for failing to comply with Section 409A of the Code.

(l) Copies of the Corporation's Annual Report to Stockholders for its latest fiscal year and the Corporation's latest quarterly report are available, without charge, on the Corporation's website and at the Corporation's business office.

(m) The Corporation is not providing any tax, legal or financial advice, nor is the Corporation making any recommendations regarding your participation in the 2022 Plan, or his or her acquisition or sale of the underlying shares of Common Stock. You understand and agree that you are advised to consult with your own personal tax, legal and financial advisors regarding your participation in the 2022 Plan before taking any action related to the 2022 Plan.

(n) In the event that any provision in this Agreement will be held invalid or unenforceable, such provision will be severable from, and such invalidity or unenforceability will not be construed to have any effect on, the remaining provisions of this Agreement.

(o) You acknowledge that a waiver by the Corporation of breach of any provision of this Agreement shall not operate or be construed as a waiver of any other provision of this Agreement, or of any subsequent breach of this Agreement.

15. Appendix. The RSUs and the shares of Common Stock acquired under the 2022 Plan shall be subject to any special terms and conditions for your country set forth in the Appendix to this Agreement. Moreover, if you relocate to one of the countries included in the Appendix, the special terms and conditions for such country will apply to you, to the extent that the Corporation determines that application of such terms and conditions is necessary or advisable for legal or administrative reasons. The Appendix constitutes part of this Agreement.

16. Imposition of Other Requirements. The Corporation reserves the right to impose other requirements on the RSUs and on any shares of Common Stock acquired upon vesting of the RSUs, to the extent that the Committee determines it is necessary for legal or administrative reasons, and to require you to sign any additional agreements or undertakings that may be necessary to accomplish the foregoing.

* * * * *

By acknowledging this grant of an award or your acceptance of this Agreement in the manner specified by the administrator, you, Mobileye Global Inc. and the Employer agree that the RSUs identified in your Notice of Grant are governed by the terms of this Agreement, the Notice of Grant and the 2022 Plan. You further acknowledge that you have read and understood the terms of the RSUs set forth in this Agreement, the Notice of Grant and the 2022 Plan.

APPENDIX TO THE
MOBILEYE GLOBAL INC.
2022 EQUITY INCENTIVE PLAN

RESTRICTED STOCK UNIT AGREEMENT

Capitalized terms used and not defined in this Appendix will have the meaning given to them in the Restricted Stock Unit Agreement (the “**Agreement**”) and/or the Mobileye Global Inc. 2022 Equity Incentive Plan (the “**2022 Plan**”), as applicable.

Terms and Conditions

This Appendix, which is part of the Agreement, contains additional or different terms and conditions that govern the RSUs if you are residing and/or employed outside of the United States. The terms and conditions in **Part A** apply to all Participants outside of the United States. The country-specific terms and conditions in **Part B** apply to Participants located in any of the countries listed in **Part B**.

If you are a citizen or resident of a country other than the one in which you are currently residing and/or working, transfer employment and/or residency to another country after the RSUs are granted to you or are considered a resident of another country for local law purposes, the Corporation will determine to what extent the terms and conditions herein will apply to you.

Notifications

This Appendix also includes information regarding securities laws and certain other issues of which you should be aware with respect to your participation in the 2022 Plan. The information is based on the securities, exchange control and other laws in effect in the respective countries as of May 2022. Such laws are often complex and change frequently. As a result, the Corporation strongly recommends that you not rely on the information noted herein as the only source of information relating to the consequences of your participation in the 2022 Plan because the information may be out of date at vesting and settlement of the RSUs, upon the subsequent sale of the shares of Common Stock or upon the receipt of any dividends.

In addition, the information is general in nature and may not apply to your particular situation, and the Corporation is not in a position to assure you of any particular result. Accordingly, you should seek appropriate professional advice as to how the relevant laws in your country may apply to your situation.

A. NON-U.S. PROVISIONS

1. Nature of Grant. The following provision supplements Section 14 of the Restricted Stock Unit Agreement. In accepting the RSUs, you acknowledge, understand and agree that:

(a) the 2022 Plan is established voluntarily by the Corporation, is discretionary in nature and may be modified, amended, suspended or terminated by the Corporation at any time, to the extent permitted by the 2022 Plan;

(b) the grant of the RSUs is voluntary and occasional and does not create any contractual or other right to receive future grants of restricted stock units, or benefits in lieu of restricted stock units, even if restricted stock units have been granted in the past;

(c) all decisions with respect to future restricted stock units or other grants, if any, will be at the sole discretion of the Corporation;

(d) the grant of RSUs and your participation in the 2022 Plan shall not create a right to employment or be interpreted as forming an employment or service contract with the Corporation, the Employer, or any parent or Subsidiary and shall not interfere with the ability of the Corporation, the Employer, or any parent or Subsidiary to terminate your employment;

(e) you are voluntarily participating in the 2022 Plan;

(f) the RSUs and the shares of Common Stock subject to the RSUs, and the income from and value of same, are not intended to replace any pension rights or compensation;

(g) the RSUs and the shares of Common Stock subject to the RSUs, and the income from and value of same, are not part of normal or expected compensation or salary for any purposes, including, but not limited to, calculation of any severance, resignation, termination, redundancy, dismissal, end-of-service payments, bonuses, long-service awards, pension or retirement or welfare benefits or similar mandatory payments;

(h) the future value of the underlying shares of Common Stock is unknown, indeterminable and cannot be predicted with certainty;

(i) notwithstanding any terms or conditions of the 2022 Plan to the contrary, for purposes of your RSUs, your employment or consulting services will be considered terminated as of the date you are no longer actively providing services to the Corporation or any Subsidiary (regardless of the reason for such termination and whether or not later found to be invalid or in breach of employment laws in the jurisdiction where you are providing service or the terms of your service agreement, if any) and will not be extended by any notice period (e.g., your period of service would not include any contractual notice period or any period of “garden leave” or similar period mandated under employment laws in the jurisdiction where you are providing service or the terms of your service agreement, if any). The Committee shall have the exclusive discretion to determine when you are no longer actively providing services for purposes of your RSU grant (including whether you may still be considered to be providing services while on a leave of absence); and

(j) neither the Corporation nor the Employer nor any parent or Subsidiary will be liable for any foreign exchange rate fluctuation between your local currency and the United States Dollar that may affect the value of the RSUs or of any amounts due to you pursuant to the RSUs or the subsequent sale of any shares of Common Stock subject to the RSUs acquired under the 2022 Plan.

2. Language. You acknowledge that you are proficient in the English language, or have consulted with an advisor who is sufficiently proficient in English, so as to allow you to understand the terms and conditions of this Agreement. If you have received this Agreement or any other document related to the RSUs translated into a language other than English and if the meaning of the translated version differs from the English version, the English version shall control.

3. Electronic Delivery and Participation. The Corporation may, in its sole discretion, decide to deliver any documents related to RSUs granted under the 2022 Plan or future RSUs that may be granted under the 2022 Plan by electronic means or request your consent to participate in the 2022 Plan by electronic means. You hereby consent to receive such documents by electronic delivery and agree to participate in the 2022 Plan through any online or electronic system established and maintained by the Corporation or a third party designated by the Corporation.

4. Insider Trading Restrictions/Market Abuse Laws. You acknowledge that you may be subject to insider trading restrictions and/or market abuse laws based on the exchange on which the shares of Common Stock are listed and in applicable jurisdictions, including the United States, your country and the broker's country, which may affect your ability to accept, acquire, sell or otherwise dispose of shares of Common Stock, rights to shares of Common Stock (e.g., RSUs) or rights links to the value of shares of Common Stock under the 2022 Plan during such times as you considered to have "inside information" regarding the Corporation (as defined by the laws in the applicable jurisdictions). Local insider trading laws and regulations may prohibit the cancellation or amendment of orders you placed before you possessed inside information. Any restrictions under these laws or regulations are separate from and in addition to any restrictions that may be imposed under any applicable Corporation insider trading policy. You acknowledge that it is your responsibility to comply with any applicable restrictions and that you should speak to your personal advisor on this matter.

5. Exchange Control, Foreign Asset/Account and/or Tax Reporting Requirements. You acknowledge that there may be certain exchange control, foreign asset/account and/or tax reporting requirements which may affect your ability to acquire or hold shares of Common Stock or cash received from participating in the 2022 Plan (including the proceeds from the sale of shares of Common Stock and the receipt of any dividends) in a brokerage or bank account outside your country. You may be required to report such accounts, assets or related transactions to the tax or other authorities in your country. You also may be required to repatriate sale proceeds or other funds received as a result of participating in the 2022 Plan to your country within a certain time after receipt. You acknowledge that it is your responsibility to comply with such regulations and that you should speak to your personal advisor on this matter.

B. COUNTRY-SPECIFIC PROVISIONS

GERMANY

Control of 2022 Plan. For the avoidance of doubt, the 2022 Plan shall only control unless otherwise stipulated in this Section.

Definition of Disability. The definition of "disability" or "Disablement" for purposes of the RSUs and the 2022 Plan shall, for the avoidance of doubt, be interpreted as understood and interpreted by German law.

Eligible Participant. The Corporation's discretion to award rights under the 2022 Plan to eligible Participants shall be exercised in a way complying with German law, in particular with the labor law principle of equal treatment (*arbeitsrechtlicher Gleichbehandlungsgrundsatz*) and with the prohibition of discrimination (*Diskriminierungsverbot*).

Leaves of Absences. The Corporation's discretion to grant awards under the 2022 Plan shall be exercised in a manner complying with German law, in particular with the labor law principle of equal treatment (*arbeitsrechtlicher Gleichbehandlungsgrundsatz*) and with the prohibition of discrimination (*Diskriminierungsverbot*). For the avoidance of doubt, any sick leave or other leave of absence as used in the 2022 Plan shall be interpreted and applied as compliant with German law.

Clawback. For the avoidance of doubt, any clawback shall only be made as permitted under German law requisites. Remedies. For the avoidance of doubt, remedies shall only be claimed as permitted under German law requisites.

No Legal Claim. Participant acknowledges and agrees that the Award is a voluntary one-time benefit, and that Participant does not have a legal claim for further grants.

Board and Committee Discretion and Decisions. The discretion of the Committee under the 2022 Plan, the Agreement and this Section, including their interpretation, shall always be exercised reasonably (*nach billigem Ermessen*) as defined under German law.

Consent to Personal Data Processing and Transfer. The following provisions shall apply in lieu of Section 13 of the Agreement: It shall be a term and condition of each award under the 2022 Plan that Participant acknowledges and consents to the collection, use, processing and transfer of personal data as described below. The Corporation and certain Subsidiaries of the Corporation (all together, the “Company Entities”) hold certain personal information, including Participant’s name, home address and telephone number, date of birth, social security number or other employee tax identification number, employment history and status, salary, nationality, job title, and any equity compensation grants awarded, cancelled, purchased, vested, unvested or outstanding in Participant’s favor, for the only purpose of managing and administering the 2022 Plan (“Data”). The Company Entities will transfer Data to any third parties assisting the Corporation in the implementation, administration and management of the 2022 Plan. The Company Entities may also make the Data available to public authorities where required under locally applicable law. These recipients may be located in the United States, the European Economic Area, or elsewhere, which Participant separately and expressly consents to, accepting that outside the European Economic Area, data protection laws may not be as protective as within. The third parties currently assisting the Corporation in the implementation, administration and management of the 2022 Plan are the following: E*TRADE. However, from time to time, the Company Entities may retain additional or different third parties for any of the purposes mentioned on which the Corporation will inform Participant and seek the additional consent of Participant. Participant hereby authorizes the Company Entities to receive, possess, use, retain and transfer the Data, in electronic or other form, for the purposes of implementing, administering and managing participation in the 2022 Plan, including any requisite transfer of such Data as may be required for the administration of the 2022 Plan on behalf of Participant to a third party with whom Participant may have elected to have payment made pursuant to the 2022 Plan. Participant may, at any time, review Data, require any necessary amendments to it or withdraw the consent herein in writing by contacting the Corporation through its local Human Resources Director; however, withdrawing the consent may affect Participant’s ability to participate in the 2022 Plan and receive the benefits under the Agreement. Data will only be held as long as necessary to implement, administer and manage Participant’s participation in the 2022 Plan and any subsequent claims or rights.

Taxes and Other Withholding. For the avoidance of doubt, any withholding and payment obligations under the 2022 Plan and the Agreement shall be made by the relevant member of the Company Entities employing Participant when due and any taxes should always include German social security contributions (including Participant’s portion) and mandatory withholding and pay obligations in accordance with German law.

Tax Consequences. Any tax consequences arising from the vesting or distribution or otherwise pursuant to an Award shall be borne solely by Participant (including, without limitation, Participant’s individual income tax and Participant’s social security contributions, if applicable). The Company Entities shall be entitled to (a) withhold Participant’s social security contributions and individual income tax (if required) according to the requirements under applicable laws, rules and regulations, including withholding taxes at source and (b) report the income and requested details in respect of any award to the competent tax and social security authorities. Furthermore, Participant shall agree to indemnify the Company Entities and hold them harmless against and from any and all liability for any such tax or other payment or interest or penalty thereon, including without limitation, liabilities relating to the necessity to withhold, or to have withheld, any such tax from any payment made to Participant.

ISRAEL

Terms and Conditions

Capital Gains Track Requirements. By accepting the award of RSUs, you acknowledge and agree that the award

is subject to the 2022 Plan, the Israel Sub-Plan and Sections 102(b)(2) and (3) of the Income Tax Ordinance (New Version) – 1961, the Rules, and the Trust Agreement (as defined in the Israel Sub-Plan), a copy of which has been made available to you. You confirm that (a) you are familiar with the terms and provisions of Section 102 of the ITO, particularly the Capital Gains Track described in subsection (b)(2) and (3) thereof, and agrees not to require the Trustee to release the award or to sell or transfer the award to you or any third party unless permitted to do so by applicable law (b) the terms and restrictions set forth in the Israel Sub-Plan will apply to the award in all respects, including without limitation with respect to mandatory tax withholding requirements, and the rights and authorities of the Company, its Affiliates and the Trustee with respect thereto, and (c) the Company, its affiliates, assignees and successors shall be under no duty to ensure, and no representation or commitment is made, that an award qualifies or shall qualify under any particular tax treatment.

You further acknowledge and agree that the RSUs and any Shares issued upon vesting thereof shall be deposited with the Trustee, or shall be subject to a supervisory trustee arrangement approved by the ITA for the Trustee, in order to comply with the requirements of the capital gains track under Sections 102(b)(2) and (3) of the ITO.

You hereby undertake to release the Trustee from any liability in respect of any action or decision duly taken and bona fide executed in relation to the 2022 Plan, the RSUs or Shares issued thereunder.

Data Privacy. The following provision supplements Section 13 of the Agreement:

You hereby authorize the Corporation, the Trustee and their representatives to collect, use and transfer all relevant information regarding your participation in the 2022 Plan to all Company personnel and agents and or third parties involved in the administration of the 2022 Plan and/or in the event of a corporate financing, merger, acquisitions and/or business transfers, including transfers outside of Israel and further transfers thereafter.

ITALY

Terms and Conditions

Consent to Personal Data Processing and Transfer. The following provisions shall apply in addition to Section 13 of the Agreement: It shall be a term and condition of each award under the 2022 Plan that Participant acknowledges and consents to the collection, use, processing and transfer of personal data as described below. The Corporation and certain Subsidiaries of the Corporation (all together, the “Company Entities”) hold certain personal information, including Participant’s name, home address and telephone number, date of birth, social security number or other employee tax identification number, employment history and status, salary, nationality, job title, and any equity compensation grants awarded, cancelled, purchased, vested, unvested or outstanding in Participant’s favor, for the only purpose of managing and administering the 2022 Plan (“Data”). The Company Entities will process and transfer Data to any third parties, including those located outside of Italy, assisting the Corporation in the implementation, administration and management of the 2022 Plan. The Company Entities may also make the Data available to public authorities where required under locally applicable law.

Definition of Disability. The definition of “disability” or “Disablement” for purposes of the RSUs and the 2022 Plan shall, for the avoidance of doubt, be certified, interpreted as understood and interpreted by Italian law, unless otherwise decided by the Corporation.

Eligible Participant. The Corporation’s discretion to award rights under the 2022 Plan to eligible Participants shall be exercised in a way complying with Italian law, and in particular should not result in a breach of labor laws on equal treatment.

Misconduct. For purposes of the RSUs and the 2022 Plan, in case of Misconduct (as described in Section 5 of the Agreement) the Committee may terminate or suspend the vesting or grant of RSUs at its own discretion, independently from any potential grievance process carried out or to be carried out under Italian law.

No Legal Claim. Participant acknowledges and agrees that the Award is a voluntary one-time benefit, and that Participant does not have a legal claim for further grants.

Taxes and Other Withholding. For purposes of determining the employment income for Italian tax purposes (Article 9, Tax Withholding of the Agreement), withholding and pay obligations shall apply in accordance with Italian law.

JAPAN

Terms and Conditions

No Registration. An award of RSUs representing a right to receive a number of Shares under the 2022 Plan will be offered in Japan by a private placement to small number of subscribers (*shoninzu muke kanyu*), as provided under Article 23-13, Paragraph 4 of the Financial Instruments and Exchange Law of Japan (“FIEL”), and accordingly, the filing of a securities registration statement pursuant to Article 4, Paragraph 1 of the FIEL has not been made, and such Award may not be assigned or transferred by Participant.

Mobileye Vision Technologies LTD.

Employment Agreement

This Employment Agreement is effective as of April 01 2022 (the "Effective Date"), by and between Mobileye Vision Technologies Ltd., Registration No. 51-270043-6, an Israeli company with its principal offices at 13 Hartum St., Jerusalem, Israel (the "Company"), and Boaz Ouriel [REDACTED] [REDACTED] an individual whose address at [REDACTED] (the "Employee").

Witnesseth:

WHEREAS, the Company desires to employ the Employee as its Software Development Manager - VP and the Employee desires to be employed by the Company in that position on the terms and conditions set forth below:

NOW, THEREFORE, in consideration of the foregoing and the mutual promises and covenants herein contained, the parties hereto agree as follows:

1. The Employee's Duties and obligations

- 1.1. The Employee shall from April 01 2022 (hereinafter "Date of Commencement of Employment") serve in the position of Software Development Manager - VP and shall report to Yossi Kreinin. The Employee shall observe and comply with all resolutions, regulations and directions from time to time made or given by the Company.
- 1.2. The Employee shall use his best endeavors to promote the interests of the Company. The Employee shall devote all of his business and professional time, attention, energy, skill, learning and best efforts to the affairs of the Company and shall perform his duties provided for hereunder at such locations as is directed by the Company. The Employee shall use his best endeavors to protect the good name of the Company and shall not perform any act that shall bring the Company into disrepute.
- 1.3. In the event that the Employee shall discover that he has or might have at some point in the future any direct or indirect personal interest in any of the Company's business or a conflict of interest with the duties required of him by virtue of his employment with the Company, immediately upon such discovery the Employee shall so inform the board of directors of the Company in writing.
- 1.4. The Employee shall not during the term of this Agreement engage directly or indirectly in rendering services of a business, professional or commercial nature to any other person, firm, or corporation, whether or not such services are rendered for gain, profit or other pecuniary advantage.
- 1.5. The Employee shall not directly or indirectly accept any commission, rebate, discount, or gratuity in cash or in kind, from any person who has or is likely to have a business relationship with the Company.

2. Scope of employment & overtime payment

- 2.1. Standard full-time employment in the company entails- forty-two hours weekly excluding breaks. Employment comprises five days a week, Sunday to Thursday. All compensation and benefits in this contract apply to full-time employment as defined above. Partial employment will be compensated in proportion to full employment. The employee has agreed to work 100% of full employment and will therefore receive compensation and benefits in the same percentage of the compensation and benefits applicable to full employment
- 2.2. In addition to section 2.1 aforementioned, the Employee will be required, from time to time and in accordance with the Company needs, to work overtime (hereinafter: "overtime"). The overtime norm must not, at any circumstances, exceed 36 hours per month.
- 2.3. The Employee shall be entitled to compensation for overtime worked by him in the total sum of **11,324** NIS per month (hereinafter: "overtime payment"). The overtime payment shall be calculated as follows: the Base salary as was set on section 3.1 divided by 182 hours (each month) multiplied by the overtime norm as was set on sections 2.2+2.1 aforementioned and multiplied by 1.33 (the average between 125% overtime compensation to 150% overtime compensation).
- 2.4. It is hereby clarified and agreed upon that the Employee will not be entitled to work overtime exceeding the norm specified in section 2.2 above, without written permission given by his supervisor – as defined in section 1.1 in advance. Should a written permission be given, the Employee will be entitled to additional overtime payment regarding the overtime hours exceeding the norm specified in section 2.2 above, in accordance with reported hours and as was permitted by his supervisor.
- 2.5. Weekly Rest. The Employee's weekly day of rest shall include the Sabbath day.

3. Base salary

- 3.1. In consideration for the performance of all his duties on behalf of the Company according to this contract, the Employee shall be entitled to a monthly global salary (the "Base Salary") of **43,045** New Israeli Shekels ("NIS"), and also to supplementary payments (i.e. overtime payment), to social benefits and to pension insurance, as specified in section 4 below (hereinafter: "The Benefits").
- 3.2. It is understood and agreed upon the parties that the Base Salary, the supplementary payments and The Benefits are in gross values and shall be subject to tax deduction at source, as required by any relevant law.
- 3.3. It is understood and agreed upon the parties that the Base Salary, the supplementary payments and the Benefits shall be deemed as the full and total consideration that the Employee is entitled to, either according to this contract or according to any law applicable, due to the fulfillment of his obligations according to this contract, including overtime work.
- 3.4. The Employee shall devote his full working hours, attention, diligence and energy to his employment under this Agreement.
- 3.5. The Base Salary and the Benefits for each preceding month shall be paid in the next month not later than the 9th day of the month. The Company shall make the appropriate payments on behalf of the Employee, out of the money that was deducted from the Salary, the supplementary payments or from the Benefits to the income tax authorities, the Institute of National Insurance and any other relevant authority.

4. Benefits

- 4.1. Advance study Fund ("Keren Hishtalmut"). The Employee will be entitled to an Advance Study Fund, starting from the first month of his employment. For each month, the Company and the employee will contribute the following amounts towards the Advance Study Fund of the employee's choosing: A total of 7.5% of the Employee's 'Insured Salary' will be contributed by the company and a total of 2.5% of the Employee's 'Insured Salary' will be contributed by the employee. For this purpose, the Insured Salary equals to 80% of the Base Salary + Overtime Payment + Convalescence Pay - Any amounts paid to Advance Study fund that exceed the tax-exempt ceiling will be taxable by the employee.
- 4.2. Convalescence Pay. The Employee shall be entitled to convalescence pay equal to 255 NIS per month. It is clarified that to the extent that this amount is lower than the amount of the convalescence allowance to which the employee is entitled, according to the applicable law, The company will pay an additional payment of the balance of the legal convalescence allowance.
- 4.3. Severance Pay and Managers Insurance.

The Company will pay contributions on account of the Employee into a pension plan of the Employee's choosing (pension fund / Managers Insurance).

For the purposes of this section only, the Insured Salary will be the Base Salary, together with the overtime payment, hereinafter: the "Insured Salary").

In the event that the Employee chooses a pension fund – the Company's budgetary allocation for contributions, will be 6.5% of the insured salary on account of benefits, and 8.33% of the insured salary on account of severance pay, and the Employee's contribution will be 6%, of the insured salary deducted from his salary and transferred to the pension plan.

In the event that the Employee chooses a senior executive insurance policy, contributions will be identical to those with respect to a pension fund, but the Company's contributions for benefits, 6.5% of the insured salary, will also include the cost of disability insurance, to the tune coverage of 75% of the Insured Salary, provided that the Company's contribution rate for benefits alone, is no less than 5% of the Insured Salary. To the extent that it is necessary to increase the costs for 75% of salary coverage on account of disability insurance (beyond the Company's total budget for benefits, similarly to with the pension fund), the costs to the Company both on account of disability insurance, and on account of benefits, will not exceed 7.5% of the Insured Salary.

The Employee hereby declares that the payments under this section are done on his authority and consent.

- 4.4. Vacation days. The employee will be entitled to accumulate **24** business days' vacation in each calendar year at the first year and an extra day per year. Maximum yearly accumulation of vacation days will not exceed 24 days per year. It is hereby understood that it is in the interests of each of the parties that the Employee takes advantage of the vacation days granted to him for purposes of rest and relaxation and that the Company may, in its sole discretion, require the Employee to take advantage of any days' vacation as may become owing to him. Vacation days will be coordinated with the management and are contingent upon the Company's approval. For purposes of this Section a "Business Day" shall mean any Sunday through Thursday during which the Company is open for business.
- 4.5. Sick Leave. The employee will be entitled to fully paid sick leave beginning on the first day of his illness, conditional on presentation of certification of illness issued by the health fund (*kupat cholim*) of which the employee is a member. Other than sick leave from the first day of illness as specified above, accumulation of sick leave and all relevant effects of illness will be governed by the provisions of The Sick Pay Law 5736 - 1976.

- 4.6. Expense Reimbursement. The Company will reimburse the employee for any documented, out-of-pocket expenses from time to time properly incurred by the Employee in connection with his employment by the Company and approved in advance by the management of the company in its absolute discretion.
- 4.7. Employee Stock Plan. The employee will be recommended for a grant of **549,976 \$** in Restricted Stock Units (RSUs) of Intel. The RSUs will be granted, subject to approval by the compensation committee of Intel's board of directors, on February 28, 2022. The RSUs will become vested in three equal tranches over a three-year period, vesting 33% on each of November 30, 2022, November 30, 2023, and November 30, 2024 if there is still an employee-employer relationship on such vesting dates. 549,976\$ will be converted into RSU Units according to the average share price in the period prior to the grant date. This Information should be treated as a statement of intention and not as a definitive term.

5. Confidentiality, non-competition, technology assignment

- 5.1. The Employee agrees to maintain the terms and conditions contained in this Agreement in strict confidence and shall not disclose to any third party, including any other employee of the Company, without the prior written consent of the Company.
- 5.2. The Employee shall execute an Employee Proprietary Information and Inventions Agreement in the form of the Agreement attached hereto as Annex A.
- 5.3. Employee agrees that it would be difficult to measure damage to the Company from any breach of Employee of the promises set forth in this Section 5 or in the Proprietary Information Agreement, and that injury to the Company from any such breach would be impossible to calculate, and that money damages would therefore be an inadequate remedy for any such breach. Accordingly, Employee agrees that if he breaches any provision of this Section 5 or of the Proprietary Information Agreement, the Company will be entitled, in addition to all other remedies it may have, to an injunction or other appropriate orders to restrain any such breach by Employee without showing or proving any actual damage sustained by the Company.

6. Termination

- 6.1. The Company and the Employee may terminate this Agreement, for any reason, by giving prior notice as mandated by law.
- 6.2. In the event that the Employee does not deliver to the Employer the Prior Notice as required by section 6.1, the Employee shall pay compensation to the Employer of an amount equal to the Full salary to which the Employee would have been entitled during the period of the Prior Notice. The Employer shall be entitled to deduct such sum from any monies due and payable to the Employee.
- 6.3. Subject to the receipt by the Employee of Prior Notice from the Employer, the Employee hereby undertakes in favor of the Company that prior to termination of this Agreement for any reason, he shall train his successor and provide him with orderly explanations of all information and knowledge required to enable such successor to perform the duties in a manner similar to the manner in which the Employee performed such duties. The Company shall be entitled to cancel and revoke the provisions of this subsection.
- 6.4. In the event that the employment of the Employee is terminated, the Employee shall immediately return all documents, information, reports, possessions or other assets belonging to the Employer.

7. Miscellaneous

- 7.1. This Agreement shall be governed by and construed and interpreted in accordance with the laws of the State of Israel, without giving effect to the rules respecting conflict of law.
- 7.2. The failure of either party to insist upon the strict performance of any of the terms, conditions and provisions of this Agreement shall not be construed as a waiver or relinquishment of future compliance therewith or with any other term, condition or provision hereof, and said terms, conditions and provisions shall remain in full force and effect. No waiver of any term or condition of this Agreement on the part of either party shall be effective for any purpose whatsoever unless such waiver is in writing and signed by such party.
- 7.3. The headings of paragraphs are inserted for convenience and shall not affect any interpretation of this Agreement.
- 7.4. The provisions of this Agreement shall be deemed severable and the invalidity or unenforceability of any provision shall not affect the validity or enforceability of the other provisions hereof.
- 7.5. This Agreement together with the Employee Proprietary Information Agreement and Inventions Agreement and the rest of the appendices constitutes the entire agreement between the parties hereto and supersedes all prior agreements, understandings and arrangements, oral or written, between the parties hereto with respect to the subject matter hereof. No agreement or representations, oral or otherwise, express or implied, with respect to the subject matter hereof have been made by either party which are not expressly set forth in this Agreement and the Proprietary Information Agreement.
- 7.6. This Agreement shall be binding upon and shall inure to the benefit of the Company, its successors and assigns, and the Company shall require such successor or assign to expressly assume and agree to perform this Agreement in the same manner and to the same extent that the Company would be required to perform it if no such succession or assignment had taken place. The term "successors and assigns" as used herein shall mean a corporation or other entity acquiring all or substantially all the assets and business of the Company (including this Agreement) whether by operation of law or otherwise.
- 7.7. Neither this Agreement nor any right or interest hereunder shall be assignable or transferable by the Employee, his beneficiaries or legal representatives, except by will or by the laws of descent and distribution. IN WITNESS WHEREOF, the parties hereto have executed this Agreement as of the day and year first above written.

Boaz Ouriel

DocuSigned by:

*MOBILEYE GLOBAL INC.
SECURITIES TRADING POLICY*

(AS ADOPTED BY THE BOARD OF DIRECTORS ON MARCH 16, 2023)

A. **Background**

On March 16, 2023, the Board of Directors (the “**Board**”) of Mobileye Global Inc. (“**Mobileye**”) adopted this Securities Trading Policy for (i) Board members, (ii) officers, (iii) employees, (iv) others who are working for or providing services to Mobileye, such as contingent workers or consultants, unless they are specifically informed otherwise in writing, and (v) certain other designated persons. It applies to the trading of Mobileye’s securities as well as the securities of certain other companies and investment funds.

Relevant securities laws prohibit the purchase or sale of a public company’s securities by persons who are aware of material information about that company that is not generally known or available to the public – colloquially known as ‘insider trading’. Likewise, these laws prohibit persons who are aware of such material nonpublic information from disclosing this information to others. Companies and their controlling persons are also subject to liability if they fail to take reasonable steps to prevent insider trading by company personnel.

It is important that you understand the breadth of activities that constitute insider trading and the consequences, which can be severe. The United States Securities and Exchange Commission (the “**SEC**”), the Financial Industry Regulatory Authority, Nasdaq, and Israeli regulatory authorities investigate, and are very effective in detecting, insider trading. The SEC, together with the United States Attorneys, pursues insider trading violations vigorously. Cases have been prosecuted successfully against trading by employees through foreign accounts, trading by family members and friends, and trading involving only a small number of shares. This Policy is designed to prevent insider trading (or allegations of insider trading) and to protect both you and Mobileye from liability for such acts, as well as Mobileye’s reputation for integrity and ethical conduct. It is your obligation to understand and comply with this Policy. Should you have any questions regarding this Policy, please contact Mobileye’s General Counsel, Ms. Liz Cohen-Yerushalmi or another member of the Mobileye Legal Department (the “**Legal Department**”) at generalcounsel@mobileye.com.

Where Mobileye has discretion to act under this Policy, that discretion is in practice exercised by the Legal Department.

B. **Penalties for Noncompliance**

Civil and Criminal Penalties. Under United States law, potential penalties for insider trading include (1) imprisonment for up to twenty years, (2) criminal fines of up to \$5 million and (3) civil fines of up to three times the profit gained or loss avoided.

Controlling-Person Liability. If Mobileye fails to take appropriate steps to prevent insider trading, Mobileye may have “controlling person” liability, with civil penalties of up to the greater of \$1 million or three times the profit gained or loss avoided, as well as a criminal penalty of up to \$25 million. The civil penalties can extend personal liability to Mobileye’s Board members, officers and other supervisory personnel if they fail to take appropriate steps to prevent insider trading.

Mobileye Sanctions. Failure to comply with this Policy may also subject you to Mobileye-imposed sanctions, including dismissal, whether or not your failure to comply with this Policy results in insider trading.

C. **Scope of Policy**

Persons Covered. As a Board member, officer, employee or consultant of Mobileye or its subsidiaries, this Policy applies to you. The same restrictions that apply to you also apply to:

- Your family members who reside with you;
- Anyone else who lives in your household;

- Any family members who do not live in your household but whose transactions in Mobileye securities are directed by you or are subject to your influence or control (such as parents or children who consult with you before they trade in Mobileye securities); and
- Any entities that you influence or control, including any corporations, partnerships or trusts (collectively referred to as “**Controlled Entities**”).

You are responsible for making sure that the purchase or sale of any security covered by this Policy by any such person complies with this Policy. You should make them aware of the need to confer with you before they trade in securities covered by this Policy. Where you are unsure as to whether someone falls into one of the above categories, you should err on the side of caution and assume that they do.

Companies Covered. The prohibition on insider trading in this Policy is not limited to trading in Mobileye’s own securities. It includes trading in securities whose value is determined, in whole or in part, by the value of Mobileye’s securities; and in the securities of other companies, such as customers or suppliers of Mobileye and companies with which Mobileye may be negotiating major transactions, such as an acquisition, investment or sale, such as Intel. It also includes trading in the securities of publicly held investment funds, mutual funds and index funds, that own a disproportionate amount of Mobileye securities compared to other securities in the fund’s portfolio. Information that is not material to Mobileye may nevertheless be material to one of these other companies.

Transactions Covered. Trading includes purchases and sales of shares, derivative securities such as put and call options, convertible debentures and convertible preferred shares, as well as derivative securities not issued by Mobileye, such as exchange-traded funds or exchange-traded put or call options or swaps relating to Mobileye’s shares, and debt securities (debentures, bonds and notes). Trading also includes certain transactions under Mobileye plans, as follows:

- **Option Shares.** This Policy’s trading restrictions generally do not apply to the exercise of an option to purchase shares. The trading restrictions do apply, however, to any sale of the underlying shares acquired under exercise of an option, or to a cashless exercise of the option through a broker (often called a “sameday sale”). Such a transaction entails selling a portion of the underlying shares to cover the costs of exercise and/or withholding taxes. This Policy also applies to subsequent sales of shares received upon the exercise of options in which the proceeds are used to fund the option exercise price.
- **Restricted Shares or Restricted Share Unit Awards.** This Policy does not apply to the vesting of restricted shares or restricted share unit awards, or the exercise of a tax withholding right pursuant to which you elect (or Mobileye elects on your behalf) to have Mobileye withhold shares to satisfy tax withholding requirements upon the vesting or settlement of any restricted shares or unit award. This Policy does apply, however, to any sale of restricted shares to a third party.

D. Gifts

Bona fide gifts of securities are not transactions subject to this Policy, unless the person making the gift has reason to believe that the recipient intends to sell Mobileye securities while the donor is aware of material nonpublic information. Gifts of securities may include gifts to trusts for estate planning purposes, as well as donations to a charitable organization. Whether a gift is “bona fide” may depend on various circumstances surrounding the gift. Accordingly, you are encouraged to consult the Legal Department when contemplating a gift.

E. Statement of Policy

No Trading on Inside Information. You may not trade in Mobileye securities (or other companies specified in “Scope of Policy – Companies Covered” above), directly or through family members or other persons or entities, if you are aware of material nonpublic information relating to Mobileye. Similarly, you may not trade in any securities whose

value is determined, in whole or in part, by the value of Mobileye's securities; or in the securities of any other company if you are aware of material nonpublic information about that other company that you obtained in the course of your engagement with Mobileye.

No "Tipping". You may not pass material nonpublic information on to others or recommend to others the purchase or sale of any securities when you are aware of such information. This practice, known as "tipping," also violates the securities laws and can result in the same civil and criminal penalties that apply to insider trading, even though you did not trade and *did not gain any benefit* from the other person's trading.

No Assisting Others. You may not assist anyone in engaging in any activity prohibited by this Policy.

No Exception for Hardship. The existence of a personal financial emergency or hardship does not excuse you from compliance with this Policy.

No Exception for 'Small' Trades. There is no exception for a 'small' trade or a 'small' profit made/loss prevented.

No Exception for Transactions Unrelated to Inside Information. There are no exceptions to this Policy, except as specifically noted herein. The securities laws do not recognize any mitigating circumstances, and, in any event, even the appearance of an improper transaction must be avoided to preserve Mobileye's reputation for adhering to the highest standard of conduct. To avoid even the appearance of impropriety, additional restrictions on trading Mobileye securities apply to directors, officers and certain designated employees who have regular access to material nonpublic information about Mobileye. These policies are set forth in the Addendum attached hereto (the "**Addendum**"). Mobileye will notify you if you are subject to the Addendum. The Addendum generally prohibits directors, officers and the designated employees from any trading in Mobileye securities during blackout periods and, for a sub-set of them, requires pre-clearance for all transactions in Mobileye securities.

F. Definition of "Material Nonpublic Information"

Note that inside information has two important elements—materiality and public availability.

Material Information. Information is material if there is a substantial likelihood that a reasonable investor would consider it important in deciding whether to buy, hold or sell a security. Any information that could reasonably be expected to affect the price of the security is material. Depending on the circumstances, the following may constitute material information:

- Earnings guidance, including projections of future revenues, costs, earnings or losses, changes to previously announced earnings guidance, or the decision to suspend earnings guidance,
- Earnings or operating results that are inconsistent with the consensus expectations of the investment community,
- A pending or proposed merger, acquisition or tender offer or an acquisition or disposition of significant assets,
- A significant pending or proposed joint venture,
- A Mobileye restructuring or a significant related-party transaction,
- Major events regarding Mobileye's securities, including a change in dividend policy, the declaration of a share split, the offering of additional securities or the establishment of a repurchase program,
- Bank borrowings or other financing transactions out of the ordinary course,

- Severe financial liquidity problems or an impending bankruptcy,
- A change in executive management,
- Actual or threatened major litigation or government action, or the resolution of such litigation,
- Significant technology events, such as major discoveries or significant developments of or changes in products, research or technologies,
- New major contracts, orders, suppliers, customers, partners or finance sources, the loss thereof or major marketing changes,
- The acquisition or licensing of products or product candidates, the introduction or a change in status of significant new products, or a significant change in Mobileye's pricing or cost structure,
- A change in auditors or notification that the auditor's reports may no longer be relied upon,
- The imposition of a ban on trading in Mobileye securities or the securities of another company, and
- A cybersecurity incident or risk that may adversely affect Mobileye.

Both positive and negative information can be material. *Because trading that receives scrutiny will be evaluated after the fact with the benefit of hindsight (i.e. with the benefit of seeing what actually happened to the share price), questions concerning the materiality of particular information should be resolved in favor of materiality.* In other words, in case of doubt, trading should be avoided.

Nonpublic Information. Nonpublic information is information that is not generally known or available to the public. One common misconception is that material information loses its "nonpublic" status as soon as a press release is issued disclosing the information. In fact, information is considered to be available to the public only when it has been released broadly to the marketplace (such as by (i) disclosure through the Dow Jones "broad tape" or a newswire service, (ii) publication in a widely available newspaper, magazine or news website, or (iii) filing public disclosure documents with the SEC that are available on the SEC's website) **and** the investing public has had time to digest the information fully. As a general rule, information is considered nonpublic until the end of one full trading day after the information is released. For example, if Mobileye announces earnings before trading begins on a Tuesday, then the first time you can buy or sell Mobileye securities is the opening of the market on Wednesday (assuming you are not aware of other material nonpublic information at that time). However, if Mobileye announces earnings after trading begins on that Tuesday, then the first time you can buy or sell Mobileye securities is the opening of the market on Thursday.

G. Blackout Procedures

Quarterly Blackout. The following blackout procedures apply to all Mobileye directors and officers and certain designated employees together with their family members and other members of their household and Controlled Entities as described under "Scope of Policy – Persons Covered" above. Mobileye's announcement of its quarterly financial results always has the potential to have a material effect on the market for Mobileye's securities. Therefore, to avoid even the appearance of trading on the basis of material nonpublic information, Relevant Individuals may not trade in Mobileye's securities during the period beginning 15 calendar days before the close of each fiscal quarter and ending after one full trading day following the release of Mobileye's earnings for that quarter on Form 8-K (note that the Form 10-Q for the applicable period may be filed later than the Form 8-K, but the filing of the Form 8-K is the relevant date for this purpose).

Event-Specific Blackouts. From time to time, an event may occur that may be considered material to Mobileye and

is not publicly known. As long as the event may be considered material and remains nonpublic, the persons who are aware of the event may not trade in Mobileye securities or investment funds that own a disproportionate amount of Mobileye's securities.

In addition, whenever Mobileye considers it necessary or desirable to promote compliance with applicable securities laws, it may notify all or any group of Board members, officers, employees or consultants that they are not permitted to trade in Mobileye's securities or in the securities of another public company. This trading restriction is known as an "event-specific blackout." Mobileye has full discretion to determine the time period during which trading will be blacked out. Because it is often difficult to assess the materiality of nonpublic information, Mobileye may impose an event-specific blackout if there is risk that nonpublic information may be material, even though the matter is not free from doubt.

The existence of an event-specific blackout will be announced only to those persons who are prohibited from trading. It applies to these persons whether or not they are aware of the event that triggered the blackout. A person who was made aware of the existence of an event-specific blackout should not disclose the existence of the blackout to anyone else.

The failure of the Legal Department to subject a person to an event-specific blackout will not relieve that person of the obligation not to trade while aware of material nonpublic information.

Interim Earnings Guidance. Mobileye may on occasion issue interim earnings guidance or other potentially material information by means of a press release, SEC filing on Form 8-K, or other means designed to achieve widespread dissemination of the information. You should anticipate that trading will be blacked out while Mobileye is in the process of assembling the information to be released and until the information has been released and fully absorbed by the market. Mobileye has full discretion to determine the time period during which trading will be blacked out and the persons to whom the blackout will apply.

Cancellation of Orders Given Prior to the Beginning of a Blackout Period. If you have given an order for a trade that is not yet executed as of the beginning of a blackout period, you must immediately cancel that order as soon as the blackout period begins.

General. Even if a blackout period is not in effect, at no time may you trade in Mobileye securities if you are aware of material nonpublic information about Mobileye.

H. Exception for Approved 10b5-1 Plans

SEC Rule 10b5-1 provides an affirmative defense from insider trading liability under the United States federal securities laws for trading plans that meet certain requirements ("**10b5-1 Plans**"). Detailed information concerning 10b5-1 plans is set forth in Schedule A to this Policy.

I. Additional Guidance

Mobileye considers it improper for those who are employed by or associated with Mobileye to engage in short-term or speculative transactions in Mobileye's securities or in other transactions in Mobileye's securities that may lead to inadvertent violations of the insider trading laws. Accordingly, your trading in Mobileye securities is subject to the following additional guidelines:

Short Sales. You may not engage in short sales of Mobileye's securities (sales of securities that you do not own, i.e. borrowed securities or sales of securities that you do own, but with delayed delivery). You must maintain ownership of a number of shares at least equal to the number that you sold short.

Options, Other Derivative Securities and Hedging. You may not engage in transactions involving options on Mobileye's securities, such as puts, calls and other derivative securities, whether on an exchange or in any other

market. You also may not engage in hedging transactions, such as collars, equity swaps, exchange funds and forward sale contracts or otherwise engage in transactions that hedge or offset, or are designed to hedge or offset, any decrease in the market value of Mobileye's securities. (Please consult the Legal Department if you are uncertain whether a particular type of transaction is covered by this prohibition.)

Standing or Limit Orders. A standing or limit order is an instruction to a broker to trade a security if the market price reaches a certain amount. Standing or limit orders are permitted, but they involve risk because they leave you with no control over the timing of the transaction and could be executed by the broker when you are aware of material nonpublic information, which could constitute insider trading. If you place such an order at a time when you do not have material non-public information, it is possible -but not certain - that it will satisfy the requirements to qualify as a 10b5-1 plan. This Policy recommends, however, that instead of standing or limit orders you instead use a formal written 10b5-1 plan (see Schedule A).

Margin Accounts and Pledges. Securities held in a margin account or pledged as collateral for a loan may be sold without your consent—by the broker if you fail to meet a margin call, or by the lender in foreclosure if you default on the loan. Because a margin or foreclosure sale may occur at a time when you are aware of material nonpublic information or otherwise are not permitted to trade in Mobileye securities, you are prohibited from holding Mobileye securities in a margin account or pledging Mobileye securities as collateral for a loan. An exception to this prohibition may be granted where you wish to pledge Mobileye securities as collateral for a loan (not including margin debt) and clearly demonstrate the financial capacity to repay the loan without resort to the pledged securities. If you wish to pledge Mobileye securities as collateral for a loan, you must submit a request for approval to the Legal Department at least two weeks prior to the proposed execution of documents evidencing the proposed pledge.

Short-Term Trading. If you purchase Mobileye securities in the open market, you may not sell any Mobileye securities of the same class (which includes any other securities that are convertible or exchangeable into such class) during the six months following the purchase (or vice versa). Short-term trading of Mobileye securities may be distracting to the person and may unduly focus the person on Mobileye's short-term stock market performance instead of Mobileye's long-term business objectives.

J. Post-Termination Transactions

This Policy continues to apply to your transactions in Mobileye securities even after you have separated from service with Mobileye or a subsidiary. If you are aware of material nonpublic information when your employment or service relationship terminates, you may not trade in Mobileye securities until that information has become public or is no longer material. All applicable "blackout" periods that are pending at the time of termination of your employment or service relationship will also continue to apply after termination of that relationship, until the scheduled end of those "blackout" periods as of the time of termination of your employment or other service relationship. The pre-clearance procedures specified in the Addendum, however, will cease to apply to transactions in Mobileye securities upon the expiration of any blackout period or other Mobileye-imposed trading restrictions applicable at the time of the termination of service.

K. Unauthorized Disclosure

Maintaining the confidentiality of Mobileye information is essential for competitive, security and other business reasons, as well as to comply with securities laws. You should treat all information you learn about Mobileye or its business plans in connection with your employment as confidential and proprietary to Mobileye. Employees should treat all corporate information with discretion and discuss confidential data only with those Mobileye employees who have a right and a need to know. In particular, do not discuss confidential information with relatives, friends or acquaintances. Inadvertent disclosure of confidential or inside information may expose Mobileye and you to significant risk of investigation and litigation. Please consult with the Legal Department regarding Mobileye's corporate communications policies for more details regarding Mobileye's policy on speaking to the media, financial analysts and investors.

The timing and nature of Mobileye's disclosure of material information to outsiders is subject to legal rules, the breach of which could result in substantial liability to you, Mobileye and its management. Accordingly, it is important that responses to inquiries about Mobileye by the press, investment analysts or others in the financial community be made on Mobileye's behalf only through authorized individuals.

In addition, you are prohibited at *all* times from posting any confidential information about Mobileye, including but not limited to confidential information about its products, its customers and partners, or its potential customers and partners, as well as any other confidential or "material" nonpublic information, in any Internet posting or discussion group. This includes, but is not limited to, Internet message boards, social media sites, blogs, chat rooms and any other website or web service that allows users to post content (e.g., Facebook, LinkedIn, Twitter, Quora, and the like).

Please do not try to resolve uncertainties on your own, as the rules relating to insider trading are often complex and not always intuitive while violations entail severe consequences.

L. Specific Provisions on Board Members' Transactions in Listed Securities of Other Companies

To the extent not prohibited by this Policy, a member of the Board may freely execute transactions in listed securities of other companies.

However, in the event that it is likely that one or more members of the Board are or may be in possession of material information relating to another company whose shares are publicly traded, the Presiding Director of the Board may determine that members of the Board cannot execute transactions in the securities of that publicly traded company. In the event the Presiding Director of the Board is in possession of material nonpublic information with respect to another publicly traded company, the entire Board shall determine whether the Presiding Director may execute any proposed transaction in the securities of that company.

A Board member who has entered into a written arrangement transferring the full management of his or her securities portfolio to an independent third party is exempt from compliance with the provisions of the foregoing paragraph.

M. Personal Responsibility

You should remember that the ultimate responsibility for adhering to this Policy and avoiding improper trading rests with you. If you violate this Policy, Mobileye may take disciplinary action, including dismissal.

N. Mobileye Assistance

Your compliance with this Policy is of the utmost importance both for you and for Mobileye. If you have any questions about this Policy or its application to any proposed transaction, you may obtain additional guidance from the Legal Department. All determinations and interpretations by the Legal Department shall be final and not subject to further review.

SCHEDULE A
10B5-1 PLANS

Rule 10b5-1 of the SEC provides an affirmative defense from insider trading liability under the United States federal securities laws for trading plans that meet certain requirements.

A 10b5-1 plan must be entered into while you are not aware of material nonpublic information. Once the plan is adopted, you must not exercise any influence over the number of securities to be traded, the price at which they are to be traded or the date of the trade. The plan must either:

- Clearly specify in advance the amount, pricing and timing of transactions (including by formula or algorithm), or
- Delegate discretion on those matters to an independent third party (such as a securities broker or investment manager). Of course, the independent third party cannot make discretionary investment decisions on your behalf while the independent third party is in possession of material nonpublic information about Mobileye.

Trades that are executed pursuant to an approved 10b5-1 plan are not subject to the prohibition on trading on the basis of material nonpublic information contained in the Securities Trading Policy, including the restrictions relating to blackout periods. Directors and officers who adopt 10b5-1 plans must notify the Compliance Officer of this fact, including a copy of the plan.

A 10b5-1 plan must comply with the following requirements:

- 10b5-1 plans may not be adopted during a blackout period and may only be adopted when you are not aware of material nonpublic information,
- 10b5-1 plans must be adopted in “good faith” and the shareholder must act in good faith with respect to the plan throughout the duration of the plan,
- Plans entered into by officers and directors must contain specific representations that such individual is not aware of material nonpublic information at the time the plan is entered into and that such individual is adopting the plan in good faith and not as part of a plan to evade the prohibition against illegal insider trading,
- The plan must not become effective until:
 - for directors and officers, the *later* of (1) the 91st day following the adoption or modification of the plan or (2) two business days after the filing of a Form 10-Q or Form 10-K covering the financial reporting period in which the plan was adopted or modified, but in no event later than 120 days,
 - for individuals other than directors or officers, the 31st day following the adoption or modification of the plan;
- The plan must remain in effect for at least six months,
- You may enter into only one “single trade” plan in any 12-month period,
- You may not enter into overlapping 10b5-1 plans, subject to a few limited exceptions:
 - where trades under a new plan do not begin until all trades under an old plan have been completed; however, where an old plan is terminated and the first trade under the new plan would have occurred during what would have been the mandatory cooling-off period assuming that the new plan had been adopted on the date the old plan was terminated (the “effective cooling-off period”), then the affirmative defense under Rule 10b5-1 would be unavailable until such cooling-off period has been satisfied,

- where a series of separate contracts with different brokers, if the contracts, considered together, otherwise meet the requirements of a 10b5-1 plan,
- where a separate plan is entered into for purposes of “sell-to-cover” transactions where a broker sells securities to satisfy tax withholding obligations in connection with the vesting of your awards or other incentive compensation (but not in connection with option exercises under your control);
- You may not enter into any transaction in Mobileye securities outside of the Rule 10b5-1 plan while the plan is in effect, and
- If the Rule 10b5-1 plan is terminated, you must wait at least 30 days before trading outside of the plan.

Any amendment, suspension or termination of a 10b5-1 plan must be promptly notified to the Compliance Officer so that the Company can meet its required disclosure obligations with respect to such plans. Amendments are subject to the cooling-off period; modifications that do not change the pricing, amount of securities or timing of trades will not trigger a new cooling-off period.

If a Board member, executive officer or other employee or consultant or a family member intends to make regular sales of Mobileye shares (for example, to diversify his or her portfolio or to meet financial commitments), then Mobileye highly recommends that a 10b5-1 plan be considered.

ADDENDUM

I. PRE-CLEARANCE PROCEDURES

Those subject to this Addendum – (i) Mobileye’s directors, (ii) each person deemed to be an “officer” in accordance with Rule 16a-1(f) (“Officers”), plus (iii) certain others designated by Mobileye from time to time – as well as the spouses, minor children, adult family members sharing the same household and any other person or entity over whose securities trading decisions the individuals in (i) – (iii) exercise influence or control (collectively, “**Related Insiders**”), may not engage in any transaction involving Mobileye’s securities (including, inter alia, the exercise of stock options, gifts, loans, contributions to a trust or any other transfers) without first obtaining pre-clearance of the transaction from the Compliance Officer.

Each proposed transaction will be evaluated to determine if it raises insider trading or other concerns. Any advice will relate solely to the restraints imposed by law and will not constitute advice regarding the investment aspects of the transaction. Clearance, if given, will specify a time window during which the transaction must be effected. If clearance is denied, the fact itself of such denial must be kept confidential by the person requesting such clearance.

II. REPORTING AND FORM FILING REQUIREMENTS

Directors and Officers of Mobileye, as well as beneficial owners of more than 10% of the outstanding shares of any class of voting Mobileye equity securities, must file forms with the U.S. Securities and Exchange Commission (the “**SEC**”) disclosing their direct and indirect pecuniary interest in most transactions involving Mobileye’s equity securities. In this context, “equity securities” of Mobileye include shares of the classes of equity securities created under Mobileye’s governing documents, such as common stock, as well as any securities (regardless of whether issued by Mobileye) that are exchangeable for or convertible into, or that derive their value from, an equity security of Mobileye. These other securities are known as “derivative securities,” and include options, restricted share units, warrants, convertible securities and stock appreciation rights.

A. Forms 3, 4 and 5

The Legal Department will assist directors and Officers in preparing and filing the following Section 16 reports but each individual director and Officer is responsible for the timing and contents of his or her reports:

- **Form 3**, Initial Beneficial Ownership Statement. A person who becomes a director or Officer of Mobileye must file a Form 3 within 10 calendar days of assuming office, even if such person does not own any Mobileye equity securities at the time of assuming office. The Form 3 must disclose such person’s position and ownership of any Mobileye equity securities as of immediately prior to assuming office.
- **Form 4**, Changes of Beneficial Ownership Statement. As long as a person remains a director or Officer, and for six months after a person ceases to hold such a position with Mobileye, a Form 4 must be filed with the SEC before 10:00 p.m., Eastern, on the second business day following any transaction by that person, whether directly or indirectly, in Mobileye equity securities (e.g., a transaction undertaken on Monday must be filed by 10:00 p.m., Eastern on Wednesday). There are exceptions to this requirement for gifts and a very limited class of employee benefit plan transactions.
- **Form 5**, Annual Beneficial Ownership Statement. A Form 5 must be filed with the SEC by any individual who served as a director or Officer of Mobileye during any part of Mobileye’s fiscal year to report:
 - all reportable transactions in Mobileye equity securities that were specifically eligible for deferred reporting on Form 5;
 - all transactions that should have been reported during the last fiscal year but were not (for any reason); and

- with respect to an individual’s first Form 5, all transactions which should have been reported but were not for the last two fiscal years (i.e., the year just ended and the previous one).

A Form 5 need not be filed if all transactions otherwise reportable have been previously reported. If required, Form 5 must be filed within 45 days after the end of Mobileye fiscal year, or the first business day thereafter. Common types of transactions reportable on Form 5 include gifts and certain acquisitions of less than \$10,000 in any six-month period, either of which may be reported on a voluntary basis on any Form 4 filed before the Form 5 is due.

B. Indirect Ownership by Related Insiders

The reports described above must also reflect any indirect ownership by directors and Officers, including all holdings and transactions by Related Insiders. This includes transactions by immediate family members living in the director’s or Officer’s household and any other person or entity over whom the individual exercises influence or control over his, her or its securities trading decisions. For this purpose, “immediate family” includes a spouse, children, stepchildren, grandchildren, parents, grandparents, stepparents and siblings, including in-laws and adoptive relationships.

Any questions concerning whether a particular transaction will necessitate filing of one of these Forms, or how or when they should be completed should be asked of the Compliance Officer, or, if you prefer, your individual legal counsel. Mobileye must disclose in its Annual Report on Form 10-K and in its Proxy Statement any delinquent filings of Forms 3, 4 or 5 by directors and Officers, and must post on its website, by the end of the business day after their filing with the SEC, any Forms 3, 4 and 5 relating to Mobileye’s securities.

C. Reporting Exemptions for Certain Employee Benefit Plan Transactions

Rule 16b-3 under the Exchange Act provides exemptions for directors and Officers reporting of certain employee benefit plan events on Forms 4 and 5, including certain routine transactions under tax-conditioned thrift, stock purchase and excess benefit plans.

A transaction that results only in a change in the form of a person’s beneficial ownership is also exempt from reporting. An exempt “change in the form of beneficial ownership” would include, for example, a distribution of benefit plan securities to an insider participant where the securities were already previously attributable to the insider. Exercises or conversions of derivative securities would not, however, be considered mere changes in beneficial ownership and would be reportable.

The vesting of most stock options, restricted stock and stock appreciation rights is also not subject to the reporting requirements, although related share-withholding transactions, if any, would give rise to Form 4 reporting obligations.

III. SHORT-SWING TRADING PROFITS AND SHORT SALES

A. Short-Swing Trading Profits

In order to discourage directors and Officers from profiting through short-term trading transactions in equity Mobileye securities, Section 16(b) of the Exchange Act requires that any “short-swing profits” be disgorged to Mobileye. (This is in addition to the reporting requirements described above.)

“Short-swing profits” are the profits, whether real or notional, that result from any purchase and sale (or sale and purchase) of Mobileye’s equity securities within a six-month period, unless there is an applicable exemption for either transaction. It is important to note that this rule applies to any matched transactions in Mobileye’s securities (including derivative securities), not only a purchase and sale (or sale and purchase) of the same shares, or even of the same class of securities. Furthermore, pursuant to the SEC’s rules, profit is determined so as to maximize the amount that the director or Officer must disgorge, and this amount may not be offset by any losses realized. “Short-swing profits” may exceed economic profits.

B. Short-Swing Exemptions for Employee Benefit Plan Transactions

As indicated, to come within the short-swing rules, a purchase and sale (or sale and purchase) within any period of less than six months are matched to determine whether a director or Officer has realized profit subject to the shortswing profit rule described above, but Rule 16b-3 creates an exemption for, or permits Mobileye's board of directors or a qualifying committee to exempt, certain transactions between (i) a director or Officer and (ii) Mobileye or certain benefit plans sponsored by Mobileye.

Under this Rule certain transactions involving acquisitions of equity securities under employee benefit plans are not counted as "purchases" for purposes of the short-swing profit rule, provided that the benefit plan meets various statutory requirements.

Mobileye's employee equity incentive plan meets these requirements, and therefore an ordinary-course acquisition of equity securities under such plan is not generally treated as a "purchase" subject to the short-swing profit rule.

Certification of the Chief Executive Officer pursuant to Section 302 of the Sarbanes-Oxley Act of 2002.

I, Professor Amnon Shashua, certify that:

1. I have reviewed this Annual Report on Form 10-K of Mobileye Global Inc.;
2. Based on my knowledge, this report does not contain any untrue statement of a material fact or omit to state a material fact necessary to make the statements made, in light of the circumstances under which such statements were made, not misleading with respect to the period covered by this report;
3. Based on my knowledge, the financial statements, and other financial information included in this report, fairly present in all material respects the financial condition, results of operations and cash flows of the registrant as of, and for, the periods presented in this report;
4. The registrant's other certifying officer(s) and I are responsible for establishing and maintaining disclosure controls and procedures (as defined in Exchange Act Rules 13a-15(e) and 15d-15(e)) and internal control over financial reporting (as defined in Exchange Act Rules 13a-15(f) and 15d-15(f)) for the registrant and have:
 - (a) Designed such disclosure controls and procedures, or caused such disclosure controls and procedures to be designed under our supervision, to ensure that material information relating to the registrant, including its consolidated subsidiaries, is made known to us by others within those entities, particularly during the period in which this report is being prepared;
 - (b) Designed such internal control over financial reporting, or caused such internal control over financial reporting to be designed under our supervision, to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles;
 - (c) Evaluated the effectiveness of the registrant's disclosure controls and procedures and presented in this report our conclusions about the effectiveness of the disclosure controls and procedures, as of the end of the period covered by this report based on such evaluation; and
 - (d) Disclosed in this report any change in the registrant's internal control over financial reporting that occurred during the registrant's most recent fiscal quarter (the registrant's fourth fiscal quarter in the case of an annual report) that has materially affected, or is reasonably likely to materially affect, the registrant's internal control over financial reporting; and
5. The registrant's other certifying officer(s) and I have disclosed, based on our most recent evaluation of internal control over financial reporting, to the registrant's auditors and the audit committee of the registrant's board of directors (or persons performing the equivalent functions):
 - (a) All significant deficiencies and material weaknesses in the design or operation of internal control over financial reporting which are reasonably likely to adversely affect the registrant's ability to record, process, summarize and report financial information; and
 - (b) Any fraud, whether or not material, that involves management or other employees who have a significant role in the registrant's internal control over financial reporting.

Certification of the Chief Financial Officer pursuant to Section 302 of the Sarbanes-Oxley Act of 2002.

I, Moran Shemesh Rojansky, certify that:

1. I have reviewed this Annual Report on Form 10-K of Mobileye Global Inc.;
2. Based on my knowledge, this report does not contain any untrue statement of a material fact or omit to state a material fact necessary to make the statements made, in light of the circumstances under which such statements were made, not misleading with respect to the period covered by this report;
3. Based on my knowledge, the financial statements, and other financial information included in this report, fairly present in all material respects the financial condition, results of operations and cash flows of the registrant as of, and for, the periods presented in this report;
4. The registrant's other certifying officer(s) and I are responsible for establishing and maintaining disclosure controls and procedures (as defined in Exchange Act Rules 13a-15(e) and 15d-15(e)) and internal control over financial reporting (as defined in Exchange Act Rules 13a-15(f) and 15d-15(f)) for the registrant and have:
 - (a) Designed such disclosure controls and procedures, or caused such disclosure controls and procedures to be designed under our supervision, to ensure that material information relating to the registrant, including its consolidated subsidiaries, is made known to us by others within those entities, particularly during the period in which this report is being prepared;
 - (b) Designed such internal control over financial reporting, or caused such internal control over financial reporting to be designed under our supervision, to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles;
 - (c) Evaluated the effectiveness of the registrant's disclosure controls and procedures and presented in this report our conclusions about the effectiveness of the disclosure controls and procedures, as of the end of the period covered by this report based on such evaluation; and
 - (d) Disclosed in this report any change in the registrant's internal control over financial reporting that occurred during the registrant's most recent fiscal quarter (the registrant's fourth fiscal quarter in the case of an annual report) that has materially affected, or is reasonably likely to materially affect, the registrant's internal control over financial reporting; and
5. The registrant's other certifying officer(s) and I have disclosed, based on our most recent evaluation of internal control over financial reporting, to the registrant's auditors and the audit committee of the registrant's board of directors (or persons performing the equivalent functions):
 - (a) All significant deficiencies and material weaknesses in the design or operation of internal control over financial reporting which are reasonably likely to adversely affect the registrant's ability to record, process, summarize and report financial information; and
 - (b) Any fraud, whether or not material, that involves management or other employees who have a significant role in the registrant's internal control over financial reporting.
